2

(10.30 am)

3

(In the presence of the jury)

4

MR JOHNSON: My Lord, I recall Professor Arthurs, please.

5

PROFESSOR OWEN ARTHURS (recalled) (via video link)

6

Examination-in-chief by MR JOHNSON

7

MR JOHNSON: Good morning, Professor Arthurs. Can you hear  
me clearly?

8

A. I can, thank you.

9

Q. Thank you very much. Just for the sake of the  
recording, would you identify yourself again, please?

10

A. Yes, I'm Professor Owen Arthurs from Great Ormond Street  
Hospital in London.

11

Q. Thank you very much, professor. We have but one child  
to ask you about today and he is [Baby Q].

12

I believe you wrote two separate reports or statements  
relating to his case; is that right?

13

A. Yes, that's correct.

14

Q. Thank you. Was the first and in effect the substantive  
report dated 21 January 2020?

15

A. Yes, that's correct.

16

Q. Did you subsequently sign a second statement, simply  
confirming the fact that you had been sent additional  
material and that that material had not changed your  
view on the case?

1 A. Yes, that's correct.

2 Q. Thank you. If I can deal first, therefore, with the  
3 material that you received in [Baby Q]'s case. I'm  
4 looking at the updated list that is in effect appended  
5 to the second of the statements that you made. Did that  
6 consist of [Baby Q]'s medical records?

7 A. Yes, that's correct.

8 Q. The radiographs, which we will deal with individually in  
9 a moment?

10 A. Yes.

11 Q. Then the statement of Dr Bohin, dated 16 April 2019; the  
12 three statements of Dr Evans, dated 21 November 2017,  
13 3 June 2018 and 25 January 2019; and a statement made by  
14 Professor Stavros Stivaros, who of course is the  
15 neuroradiologist, dated 26 October 2020?

16 A. Yes, that's correct.

17 Q. Thank you. Can we start, please, with paragraph 4 of  
18 your report, dated 21 January 2020. Did you receive,  
19 amongst all that other material, ten individual  
20 radiographs taken of [Baby Q]?

21 A. Yes, that's correct.

22 Q. The first was an abdominal image taken at 07.49 on the  
23 morning of 22 June?

24 A. Yes.

25 Q. Just to put that into context for the jury, [Baby Q] had

1                   been born earlier that morning at 04.09, so this is  
2                   a radiograph taken about 3 hours and 40 minutes after  
3                   his birth.

4           A. Yes.

5           Q. Were there then three chest X-rays or radiographs taken,  
6                   the first on 22 June at 12.39, the second on 25 June at  
7                   11.52, and the third later that same day, 25 June, at  
8                   20.25?

9           A. Yes, that's correct.

10          Q. Just to put those into a chronological framework, the  
11                   second and third of those, in other words the two taken  
12                   on 25 June, they are tiles 135 and 217 respectively, and  
13                   the event, the collapse of [Baby Q], had occurred at  
14                   09.10 hours that same morning. So putting that into  
15                   sequence then, we have [Baby Q]'s collapse -- this is all  
16                   on 25 June -- at 09.10, tile 101. The first radiograph  
17                   after the collapse at 11.52, tile 135. And the second  
18                   after the collapse at 20.25, tile 217.

19                   Moving on then, was the fifth radiograph in the  
20                   sequence an abdominal image taken the following morning,  
21                   26 June, at 05.05 hours?

22          A. Yes, that's correct.

23          Q. Just so that we know a bit about what you're about to  
24                   tell us, that is the one that you identified as showing  
25                   an abnormality; is that correct?

1

2

1 A. Yes, that's right.

2 Q. So again, just to put that into the chronological  
3 context, that image was taken about 20 hours after the  
4 event which the prosecution have identified as being  
5 relevant in this trial.

6 Then the final five images. Was the first taken the  
7 same day as the fifth, so this is the sixth in the total  
8 list, 26 June at 11.58?

9 A. Yes.

10 Q. Followed by two images on 29 June at 07.41 and 08.55?

11 A. Yes.

12 Q. And a single image of the chest on 30 June at 11.25 and  
13 then a lower leg radiograph taken several days later on  
14 3 July?

15 A. Yes, that's correct.

16 Q. So taking those five images together, does it come to  
17 this, that none of those show any abnormalities and in  
18 effect you make no further reference to them in your  
19 report?

20 A. Yes, that's correct.

21 Q. Thank you. Moving on to the medical history, which you  
22 set out in your report, did you record the fact that  
23 [Baby Q] was born at 31 weeks' gestation on 22 June?

24 A. Yes, that's right.

25 Q. That he was admitted into the neonatal unit, requiring

1                   some respiratory support?

2       A. Yes, that's correct.

3       Q. Your understanding was that he had appeared well until  
4                   he suddenly deteriorated --

5       A. Yes.

6       Q. -- at the time we have identified? Thank you.

7                   So moving then, please, to the body of your  
8                   evidence, which is your review of the imaging. Did you  
9                   conclude that the two -- the first two images in the  
10                  list, those taken on 22 June, that they showed no  
11                  abnormality?

12      A. Yes.

13      Q. Moving then to images 3, 4 and 5, we have the two taken  
14                  on the 25th in the aftermath of his collapse, which are  
15                  tiles 135 and 217. I'm just going to remind the jury of  
16                  what they looked like, Professor Arthurs, because it's  
17                  been a while since we have heard this evidence. If  
18                  Mr Murphy would help us with quickly showing us  
19                  tile 135.

20                   This is 2 hours and 40 minutes after the collapse.

21                   Is there anything unusual about that image, professor?

22      A. No. We can comment on the placement of the lines but  
23                  I don't think they're relevant to the material that's  
24                  being discussed in this case.

25      Q. Thank you. Moving then to tile 217, please. This is

1 the image of 20.25 on 25 June. Do the same comments  
2 apply to that one?

3 A. That's right. By this stage [Baby Q]'s been intubated  
4 and is being ventilated, but there's nothing else really  
5 to see on this radiograph.

6 Q. Thank you. So moving, please, to the fifth in the  
7 sequence, which is the radiograph taken on 26 June at  
8 05.05 hours. This was in the case papers at  
9 page J24266, and you annotated this next image in your  
10 report, didn't you, professor?

11 A. Yes, that's correct.

12 Q. Do we now see on the screen an image of your  
13 annotations?

14 A. Yes, that's correct.

15 Q. If you could take us through this slowly, please. What  
16 can you see and explain to us that may be viewed as  
17 being abnormal?

18 A. Yes. The top of the radiograph, where the writing  
19 "26 June 05.05" is, is effectively the diaphragm. So  
20 this is an image from below the diaphragm, so the  
21 abdomen. The arrows, the white and black arrows, show  
22 a single dilated loop of bowel, which is slightly  
23 abnormal in this context, and then the circle on your  
24 left-hand side shows another area where there could be  
25 abnormalities within the bowel called pneumatosis.

1

2

1 Q. Let's deal with what we can see in the circle then first  
2 of all. Pneumatosis, what does that mean in language  
3 that I'll be able to understand, please?

4 A. Pneumatosis is where gas within the bowel actually goes  
5 up into the bowel wall. It's recognised to be an early  
6 feature of the bowel being abnormal itself and is  
7 recognised in necrotising enterocolitis or NEC. So  
8 pneumatosis is sometimes a sign of early necrotising  
9 enterocolitis.

10 Q. Yes. So is that pneumatosis or might it be pneumatoses  
11 or what?

12 A. Yes, it could be pneumatosis and it's reasonable on the  
13 basis of this imaging to put a provisional diagnosis of  
14 NEC.

15 Q. Just remaining on the left-hand half of the image,  
16 we can see what appears to be a serpentine line running  
17 from the top down in an inverted L off to the left of  
18 the image. I'm sure everybody knows what that is, but  
19 could you just -- to remove all doubt, what is that,  
20 please?

21 A. I think that's an ECG lead, actually.

22 Q. Okay.

23 A. So that's external to the patient and has nothing to do  
24 with the bowel.

25 Q. No. Thank you. So moving across then, please, the

1 image to where we see the three arrows centring in on  
2 what looks like a -- well, what we probably all now know  
3 is part of the bowel; is that right?

4 A. Yes, that's right. It looks a bit like a sausage and  
5 the concern then -- if you think a sausage has two ends  
6 to it, the concern is that maybe the bowel has twisted  
7 on itself or is just a single loop that's become  
8 abnormal and distended, both of which are recognised to  
9 be abnormal in this context, so could be again features  
10 of necrotising enterocolitis.

11 Q. That's a phrase that you have used now more than once,  
12 I think, "could be features of necrotising  
13 enterocolitis".

14 A. Yes.

15 Q. In determining that particular question, can you, as  
16 a radiologist, take the answer any further than in  
17 effect what you've just given us?

18 A. On a radiograph, you can't make a diagnosis of NEC  
19 unless the features are absolutely severe, which in this  
20 case are not, so these are sort of mild features. We  
21 also use the passage of time to diagnose NEC on X-ray,  
22 so subsequent radiographs are necessary to make a more  
23 convincing diagnosis. So on the basis of this alone,  
24 it would be reasonable to say that this could be early  
25 NEC and then you would need to correlate that with how

1

2

1 [Baby Q] was behaving, temperature, how he was handling,  
2 et cetera.

3 Q. Yes, which presumably you would defer to clinicians?

4 A. Yes, that's right.

5 Q. Just dealing with subsequent radiographs, as you've  
6 introduced them, we did earlier in our chronological  
7 list deal with the next two. They were taken the same  
8 day. The first was at 11.58, which puts us, in general  
9 terms, about 7 hours later, and the second was at 07.41,  
10 3 days later. Did you see any similar suggestive images  
11 of NEC in either of those two radiographs?

12 A. So the next radiograph in sequence, so the one at 11.58  
13 on the same day, shows some of these similar features,  
14 but almost a little bit better. So they're resolving.  
15 But it's my understanding that it was on the basis of  
16 those two radiographs that he was transferred to  
17 Alder Hey again with a provisional or an understanding  
18 that he would need treatment for NEC.

19 Q. So, so far as the image 6 or 7 hours later, that  
20 produced a better, a more encouraging picture than the  
21 one we see here; is that right?

22 A. Yes, that is the most severe, if you like, but even this  
23 in context is relatively mild.

24 MR JOHNSON: Thank you very much. Would you wait there,  
25 please? There may be some further questions for you.

1

2

1 Cross-examination by MR MYERS

2 MR MYERS: Can you see and hear me, Professor Arthurs?

3 A. I can now, thank you, yes.

4 Q. Thank you. I'm just going to ask you about several of  
5 the radiographs you have just dealt with. The  
6 radiographs that were taken on 25 June, which we know is  
7 the day of the event the prosecution are looking at in  
8 particular, those were both principally chest  
9 radiographs, weren't they?

10 A. That's correct.

11 Q. Right. I'm going to turn next then to the two  
12 radiographs we've just been dealing with, which are both  
13 on 26 June.

14 A. Yes.

15 Q. Your opinion is that the one which is timed 5.05  
16 displays features that could be features of NEC; that's  
17 correct, isn't it?

18 A. Yes, that's right.

19 Q. And the radiograph that's timed 11.58 shows, you say,  
20 similar features but they appear to be resolving?

21 A. Yes, that's correct.

22 Q. Right. We've approached them by looking at 5.05 first  
23 and then 11.58.

24 A. Yes, that's right.

25 O. It's a matter that we can confirm, but I seem to recall

1

2

1 from the evidence we've had, 5.05 has in fact been  
2 identified at 5.05 pm, not am.

3 A. Ah.

4 Q. If that's so, what we actually have with the two  
5 radiographs is a slight worsening in the condition of  
6 NEC, don't we, if it's that way round?

7 A. If it's that way round, yes. So if that's 5 pm, that's  
8 possible. But then we should look at the X-ray which is  
9 next in series, which is from Liverpool Alder Hey, which  
10 I think was taken at 20.22 in that series.

11 Can I ask why you think that that X-ray was done at  
12 17.05 rather than 05.05? Because it's my understanding  
13 that the 05.05 timestamp is from the time that it was  
14 acquired in the hospital.

15 Q. So I should say that was my understanding initially and  
16 that's how I dealt with it, but I seem to recall, and  
17 we can confirm, that we've had evidence, it may be from  
18 Dr Gibbs, but I would like it confirm this, that in fact  
19 that X-ray of 5.05 is in the afternoon and not the  
20 morning. But in any event, if that is right, that would  
21 show a worsening, wouldn't it?

22 A. That's right, yes.

23 Q. We'll confirm that. I would like it checking if there's  
24 any uncertainty as to that. But in any event, both  
25 X-rays that we've looked at from that day display

1 features of mild NEC, don't they?

2 A. Yes, that's right.

3 Q. And what you've identified is that to make a diagnosis  
4 beyond that, one needs to look at other features like  
5 how the baby -- how [Baby Q] was behaving on handling and  
6 any variation in temperature, things like that?

7       A. Yes, the clinical features need to match with the  
8           radiographic features, that's right.

9       MR MYERS: Thank you very much, Professor Arthurs.

10 MR. JOHNSON: Does your Lordship have any questions?

11 MR JUSTICE GOSS: Well, the professor did say one then needs  
12 to look at the next radiograph at 20.22 if that's  
13 17.05 hours.

14 MR. JOHNSON: Yes.

15 MR JUSTICE GOSS: Just so we can clear it up.

16 Re-examination by MR JOHNSON

17 MR JOHNSON: When you refer to 20.22, Professor Arthurs,  
18 which of the radiographs are you talking about?

19 A. When you read through my report, that related to all of  
20 the X-rays that were done at the Countess of Chester  
21 Hospital, which is correct in that series, but of course  
22 on the evening of 26 June I understand that [Baby Q] was  
23 transferred to Alder Hey.

24 Q. He was.

25 A. And there is an X-ray taken at 20.22 on 26 June, so

1

2

1 immediately on admission, which shows -- of [Baby Q]'s  
2 abdomen, which shows there is gas in the distal bowel  
3 and effectively things are settling. So if we are to  
4 assume that the 5.05 radiograph was in fact 17.05 then  
5 my understanding is there's an X-ray at 11.58 that day  
6 that shows mild features, then an X-ray at 17.05 that  
7 day that shows slight worsening, which has then improved  
8 significantly by the time [Baby Q] arrives at Alder Hey  
9 at 20.22. So that's the reason just to mention that if  
10 there is significance in that interpretation.

11 Q. Okay. So what you're saying is if the image that  
12 we have put up is 17.05 there is a further image that  
13 wasn't in the list that we dealt with earlier, taken  
14 3 hours and about 10 or 15 minutes later, at Alder Hey,  
15 following the transfer, which shows a significant  
16 improvement?

17 A. Yes.

18 Q. Is that what you said?

19 A. So if [Baby Q] had NEC, it was very early, it was mild,  
20 and presumably resolved quite quickly.

21 MR JOHNSON: Yes. That's very helpful, thank you very much.  
22 I'm sorry, my Lord, I omitted to deal with that.

23 Does your Lordship have any further questions?

24 MR JUSTICE GOSS: No, I don't, thank you.

25 MR JOHNSON: Thank you, Professor Arthurs. That concludes

1 the evidence you're giving in this trial. Thank you.

2 MR JUSTICE GOSS: That's the case, Professor Arthurs.

3 Thank you very much for making yourself available, both  
4 in person on the occasions that you were here, and  
5 remotely. We're very grateful to you. That does  
6 complete your evidence. You won't be required again,  
7 thank you very much.

8       A. Thank you, my Lord, I'm very grateful.

9 (The video link as terminated)

10 MR ASTBURY: My Lord, may I recall, please,  
11 *Consequently, Stanion, and will return to the interviewee*

12 MR. JUSTICE GOSS: Certainly.

13 DR. DANIELLE STONER (continued)

14 Examination-in-chief by MR ASTBURY (continued)

15 MR ASTBURY: Sergeant Stonier, we dealt with, on the last  
16 occasion, the first interview concerning [Baby A],  
17 which took place on 4 July 2018; is that correct?

18 A. Yes, that's correct.

19 Q. Just by way of reminder, if it's necessary, more than  
20 one baby was discussed on that date and the following  
21 day; is that right?

22 A. Yes, that's right.

23 Q. But for presentation purposes we are dealing with or  
24 compartmentalising, if I can use that word, each baby in  
25 turn; is that right?

1

2

1 A. Yes, that's correct.

2 Q. So rather than the next baby being discussed on 4 July,  
3 we're going to go to the next interview involving  
4 [Baby A]?

5 A. Yes.

6 Q. Thank you. That should be behind divider 2, please.  
7 Hopefully everyone has the frontispiece and a page  
8 [document redacted] on the top right-hand corner.

9 These have been paginated in such a way that it's  
10 the baby but consecutive page numbers, so clearly the  
11 last interview was 23 pages but we've carried on the  
12 pagination individually for [Baby A].

13 We can see from the date, this is now 11 June 2019;  
14 is that correct?

15 A. Yes, that's correct.

16 Q. So the next occasion upon which the defendant was  
17 interviewed about [Baby A]; is that correct?

18 A. Yes, that's right.

19 Q. We heard some admissions on the last occasion to say  
20 that this was the next occasion upon which Lucy Letby  
21 was arrested by the police.

22 A. Yes.

23 Q. Thank you. So if we can present them in the same  
24 fashion, please. I'll, as best I can, play the part of  
25 the police officers if you can give the answers that

1

2

1                   Ms Letby provided.

2           A. Yes.

3           Q. Thank you.

4                   We heard last time about the caution, so there was  
5                   a series of introductions and caution; is that correct?

6           A. That's correct.

7           Q. People state their name. There's a wording to introduce  
8                   the interview and then the suspect is reminded of the  
9                   caution; is that correct?

10          A. Yes.

11          Q. Thank you.

12                   The reply from Ms Letby.

13          A. Yes.

14          Q. Okay, Lucy [says the officer], the first baby I'm going  
15                   to talk to you about is [Baby A].

16                   He then continues:

17                   Do you agree, Lucy, that it was actually you who  
18                   noticed the colour changing to [Baby A]?

19          A. I noticed the colour change, yes.

20          Q. Okay. Again, was it you, Lucy, who connected the fluids  
21                   to [Baby A]?

22          A. No, from my memory it -- it was Mel.

23          Q. And then in summary, Ms Letby was asked whether she was  
24                   standing or stood by [Baby A]'s incubator when he  
25                   collapsed. She replied?

1

2

1 A. I was stood by the incubator carrying out my checks.

2 Q. Were you stood by his incubator when his monitor  
3 sounded?

4 A. I don't recall exactly when his monitor sounded. If  
5 I was stood at his cot side then, yes, I would have  
6 heard the monitor. I agree I was stood at the incubator  
7 checking, carrying out my checks as I said before.

8 Q. But you don't remember the alarm sounding?

9 A. I don't remember specifically, no. It was a long time  
10 ago. I don't remember what monitor went off when.

11 Q. Okay. But do you remember you think that it was  
12 Nurse Taylor who connected the fluids then?

13 A. Yes, but that is only from my memory.

14 Q. It's a long time ago.

15 A. Yeah. No, I agree, as in the fluids. She did sit  
16 at the computer writing her notes while I was checking  
17 the fluids and everything else.

18 Q. Is it at that point, Lucy, that you have caused harm to  
19 [Baby A]?

20 A. No.

21 Q. Is it at that point, Lucy, that you have murdered  
22 [Baby A]?

23 A. No.

24 Q. Lucy Letby was informed of the experts' view concerning  
25 air embolus, and she replied.

1

2

1 A. Well, I don't know how he would have received a bolus of  
2 air. From which line? Does it say which line?

3 Q. How would that be of significance, Lucy?

4 A. Um, because whoever did connect the fluids, either  
5 myself or Mel, they were connecting via a long line.

6 Q. Mm-hm.

7 A. It'd be very hard to push air through a long line.

8 Q. See, you do know a little bit about it then, about air?

9 A. I know how we -- no, but I know how you flush fluids  
10 through a long line and that's a very -- it's a hard  
11 pressure to push through. I don't know how you'd push  
12 air through a long line.

13 Q. So are you saying that this was an accident then, Lucy?

14 A. No, I am saying I don't know how that occurred but I did  
15 not do anything deliberately and, yes, they've quoted me  
16 being stood at the incubator, but that does that not  
17 mean I was doing anything untoward to [Baby A].

18 Q. Was anyone else next to you by that incubator when the  
19 alarm sounded and stuff?

20 A. From memory, Reg Harkness was in the room at all times.  
21 He was with [Baby B] and Caroline Bennion, another nurse,  
22 from memory, was in and out of the room.

23 Q. So you remember that?

24 A. From memory, yes.

25 Q. But you don't remember about the line? So you remember

1           the line but you don't remember other issues about that  
2           particular collapse, do you?

3       A. No.

4       Q. Did you deliberately inject air to [Baby A]?

5       A. No, I did not.

6       Q. Did you see anyone else cause harm to [Baby A]?

7       A. No.

8       Q. Do you have any explanation, Lucy, for [Baby A]'s  
9           collapse?

10      A. No. My concern at the time with [Baby A] was whether  
11           they -- there had potentially been an issue with either  
12           the fluids or the line because it was so quickly after  
13           the fluids had been connected that there was a problem.  
14           Um, I know I had asked for all fluids to be kept, for  
15           the bag at the end to be checked. I don't know whether  
16           that was done or not. Do you know if --

17      Q. What can you tell me about air embolisms?

18      A. I don't know a lot air embolisms. I know when we're  
19           priming lines we're always taught to prime the lines  
20           fully to make sure that the lines don't have any air in  
21           them because that would be dangerous to the patient.

22      Q. Mm-hm. But when were you taught that, Lucy?

23      A. When I first very started doing fluids, when I started  
24           on the unit.

25      Q. Do you remember who told you that?

2

1 A. Not specifically, no.

2 Q. Right. But that's something you clearly knew, you were  
3 aware of?

4 A. Yes, it's something that all nursing staff -- we're very  
5 meticulous about checking the lines.

6 Q. And you'd be aware of the consequences of getting that  
7 wrong, would you?

8 A. Yeah, I think all nursing staff would be aware of that.

9 Q. And what are those dangers, Lucy?

10 A. Well, I don't know what it would cause, but you don't  
11 want air going into the bloodstream.

12 Q. Why?

13 A. Because that's just not where air would go -- it's not  
14 the natural pathological of where air would be [as  
15 read].

16 Q. And what are the consequences then if air was in the  
17 bloodstream?

18 A. I'm not sure. Would it affect the baby's perfusion?  
19 I don't know exactly how it would affect a baby.

20 Q. And Ms Letby maintained and continued to maintain she  
21 was not responsible for the death of [Baby A].

22 Again, officer, I know we covered this last time,  
23 but these are summaries of what are longer interviews,  
24 simply reduced for the benefit of the jury; is that  
25 right?

1       A. Yes, that's correct.

2       MR JUSTICE GOSS: They're in part summary and in part  
3                    verbatim. It's the relevant extracts. That was  
4                    a 51-minute interview, as you'll have seen from the  
5                    beginning, and that's just what are agreed to be the  
6                    relevant parts of that interview. Otherwise you  
7                    appreciate we would be here for an awful lot longer.  
8                    I'm not going to point this out every time. You can see  
9                    the record on the first page.

10                  And we turn over, presumably now, Mr Astbury, to the  
11                  next one, [document redacted]. You'll see the time of  
12                  that one and, again, it has been significantly reduced.

13        MR ASTBURY: This is one of those occasions where other  
14                  babies (sic) are interviewed in a longer interview but  
15                  again it's just distilled to [Baby A] for these purposes.

16        A. Yes, that's right.

17        Q. Thank you. So if we move on, we are now dated  
18                  10 November 2020; is that correct?

19        A. Yes, that's correct.

20        Q. The next is the third occasion upon which Ms Letby was  
21                  arrested --

22        A. Yes, that's right.

23        Q. -- and a series of interviews took place. If we go in  
24                  the same fashion again and we begin with a summary,  
25                  which reads.

1

2

1           Following introductions and caution, officers  
2        recapped previous interviews concerning [Baby A].

3           The question is asked:

4           Did you ever try pushing air through long lines,  
5        Lucy?

6        A. No.

7        Q. Did you push air through [Baby A]'s peripheral line or his  
8        UVC?

9        A. No.

10       Q. Is there any way that air could accidentally be inserted  
11       through the UVC?

12       A. Not that I'm aware of, no.

13       Q. Would there be any visible changes to the skin, do you  
14       know?

15       A. I'm not sure.

16       Q. Can you explain to me what internal effects this process  
17       would cause?

18       A. If there was air down the line?

19       Q. Yes. And had been administered into a neonate.

20       A. Like an air embolism, an air embolism?

21       Q. Do you want to elaborate what that is for me then, Lucy?

22       A. I don't know exactly what it is, but when we were taught  
23       about lines and things, that's the things we were taught  
24       of: that you clear the line and don't -- you know, make  
25       sure you haven't got air -- any air in because that's

1

2

1                   what it could lead to.

2           Q.    And you were fully aware of that throughout your time on  
3                   the NNU and you were confident about that process?

4           A.    Yes.

5           Q.    Lucy Letby was then informed of Professor Arthurs'  
6                   opinion, he having viewed the radiographs and was asked:

7                   Is there anything you would like to say regarding  
8                   that observation from Dr Arthurs, Lucy?

9           A.    No, I can't explain how that air got there.

10          Q.    Lucy Letby was then informed of the opinions expressed  
11                   by Dr Evans and Dr Marnerides, and asked:

12                   Is there anything you wish to comment regarding  
13                   this?

14          A.    I did not deliberately give him any air.

15          Q.    Okay, Lucy. So we're going to talk to you about some  
16                   social media and Facebook accounts evidence, okay?

17          DC Stephen Owens has reviewed the data retrieved from  
18                   the download --

19          MR JUSTICE GOSS: It says "received"; is it meant to say  
20                   "reviewed"?

21          MR ASTBURY: That's my error, sorry, I was looking at  
22                   "retrieved" instead of "received":

23                   DC Stephen Owens has received the data retrieved  
24                   from the download and has provided analysis of searches  
25                   made through your Facebook account. Can you describe

1

2

1                   your relationship with the parents of [Baby A]?

2       A. There is no relationship with the parents.

3       Q. You have no relationship, there is no -- did you have  
4                   any -- did you talk to them, did you?

5       A. A professional relationship.

6       Q. Professional?

7       A. But nothing outside of the unit, no.

8       Q. Was that the case with all the parents?

9       A. Of the babies in the inquiry?

10      Q. Yes, yes.

11      A. Yes.

12      Q. Did you have any contact with them outside of work,  
13                   Lucy?

14      A. No.

15      Q. How did you communicate with them if you needed to speak  
16                   to them?

17      A. It would either be in person on the unit or telephone  
18                   calls.

19      Q. Any other means?

20      A. No.

21      Q. And who instigated the contact? Who would instigate the  
22                   communication?

23      A. Well, it'd be either way. It would be if the parent  
24                   phoned the unit or came to the unit and asked a question  
25                   or if I had something that I needed to talk to the

1

2

1           parents about.

2       Q.   Did you use social media to research the parents, Lucy?

3       A.   I don't recall.

4       Q.   You don't recall?

5       A.   No.

6       Q.   I take it you remember having a Facebook account?

7       A.   Yes.

8       Q.   Do you still have a Facebook account now, Lucy?

9       A.   No.

10      Q.   Did you ever use Facebook to communicate with your  
11           friends and family?

12      A.   Yes.

13      Q.   Did you use it to search for individuals?

14      A.   Yes, at times, yes.

15      Q.   But you don't remember researching the parents and any  
16           of the babies?

17      A.   Not specifically, no.

18      Q.   What device did you generally use when you were  
19           communicating with friends and family?

20      A.   Which device?

21      Q.   With your Facebook account on.

22      A.   Usually a phone or a tablet.

23      Q.   And where would these searches take place, generally?

24      A.   Searches?

25      Q.   When you were searching for friends or family?

1

A. Oh, I don't know. Anywhere. At home or out.

2

Q. Did you friend request any of the parents of these  
babies at all, Lucy?

3

A. Not that I remember, no.

4

Q. Did they contact you at all through Facebook?

5

A. I can't remember.

6

Q. So from our records, Lucy, [Baby A], who was born  
on 7 June 2015, and died on 8 June 2015, on four  
attempts, 9 June, 10 June, 25 June and 2 September 2015,  
you searched on your account for the name of

7

[Mother of Babies A & B], which we know is the mother.

8

Can you give any explanation for that?

9

A. No.

10

Q. Do you agree you made those searches on Facebook then  
now I've told you this?

11

A. Yes. Yeah, if they're there, but I don't recall why or  
that I've pursued it any further in terms of asking them  
to be friends or messaging or anything like that.

12

Q. There was obviously three searches, Lucy, in June,  
pretty much after the birth and, obviously, the death of  
[Baby A] as well. When were you searching? What were  
you looking for?

13

A. I'm not sure. I don't know that I was looking for  
anything.

14

Q. Okay. Then you -- the next search you did, the final

1 search, was in September, the same year, 2015. Again,  
2 when you searched for [Mother of Babies A & B], what were  
3 you looking for on that occasion?

4 A. To see if they -- to see how maybe [Baby B] was doing.

5 Q. Okay. And why did you do that?

6 A. Because we think about the babies on the unit at times  
7 and we talk about them and wonder where they are now and  
8 what they are doing.

9 Q. Okay. What did you find when you did that search for  
10 [Baby B]?

11 A. I don't remember.

12 Q. Okay. Do you recall what you saw?

13 A. No.

14 Q. Did anybody else know you did that search for [Baby B]?

15 A. No.

16 Q. Okay. So you said on that one for September you think  
17 potentially you were looking for [Baby B]. What about the  
18 ones you did in June then?

19 A. I don't know.

20 Q. Okay. Did the mum know that you were looking for  
21 updates on [Baby B]?

22 A. No.

23 Q. Okay.

24 And then she was asked:

25 So it was nearly 6 weeks after [Baby B] had been

1 discharged from the hospital and you were still looking  
2 to see how she was getting on, is that correct,  
3 2 September 2015?

4 A. Yes, if that's the date, yeah.

5 Q. Thank you.

That concludes this summary and indeed the three summaries for [Baby A].

8 A. Yes, that's correct.

9 Q. My Lord, we'll move on to [Baby B], please,

10 if we may. The same approach, officer, the three  
11 interviews for [Baby B] together rather than in  
12 chronological order --

13 A. Yes.

14 Q. -- together with other babies. We have Lucy Letby and  
15 the date on this interview is 4 July 2018. We can see  
16 the total duration. If we turn the page for the  
17 summary, please. The jury will see this is obviously  
18 the continuation of an interview that's already started,  
19 I think in relation, on this occasion, to [Baby A].

20 A. Yes.

21 Q. So it carries on but we put it separately for [Baby B]:

22 So we 're going to move on to [Baby B] now.

23 I think you've had a copy of the notes. I take it prior  
24 to the interview you've had a chance to discuss that  
25 with your solicitor?

1

2

1 A. Yes.

2 Q. Do you remember [Baby B]?

3 A. Yes.

4 Q. Do you remember obviously [Baby B] in relation to [Baby A]  
5 and the relationship there?

6 A. Yes.

7 Q. Okay. Other than the notes that you've looked through,  
8 do you remember your involvement with the care of  
9 [Baby B]?

10 A. No.

11 Q. Okay. So what we're going to do then, we'll just go  
12 through those particular notes that you've had a chance  
13 to look at and (inaudible: coughing) 9 June 2015,  
14 I think that says "nutrition prescription".

15 A. Yeah.

16 Q. Okay.

17                   My Lord, it might be one of those occasions when we  
18                   could have the tile up so the jury know what's being  
19                   discussed. If I can ask Mr Murphy to go to tile 213,  
20                   please.

21 The question was asked:

22                   Perhaps you could just describe to us what that is  
23                   and sort of who signed what?

24 A. Yes, this is a prescription for TPN, which is parenteral  
25 nutrition that we give to babies and that consists of

1 Babiven and lipids, which is two separate infusions. So  
2 this here is what has been prescribed at the rate here.

3 Q. And Lucy Letby explained the various information  
4 contained within the prescription, confirmed her  
5 signature and that of [Nurse A]. If we can  
6 scroll down, please.

7 So this is the document that's been discussed in  
8 this phase of the interview?

9 A. Yes, it is.

10 Q. Okay:

11 Can you just tell us the date and time that you  
12 commenced them?

13 A. I believe that's 10 June 2015 at 00.05.

14 Q. Lucy Letby was then asked about the relevant fluid  
15 chart. She confirmed that it recorded a morphine  
16 infusion of 40 micrograms from a premade syringe, the  
17 volume was 4ml and was administered via a bolus,  
18 administered with a push, not via a pump.

19 Then it says:

20 What time was that on there?

21 If we go to tile 241, please, Mr Murphy. The  
22 question was asked:

23 Okay, so what time is that one on their (sic) page?

24 A. 10 June 2015 at 01.08.

25 Q. Are we right in saying then, Lucy, that in respect of

1

2

1           the first two entries you're involved with the care of  
2           [Baby B]?

3       A. Yes, from a perspective, yes.

4       Q. Ms Letby was then shown the record of the infusion  
5           beginning, which is this document at 1.10 am, which  
6           followed the bolus.

7       A. And that's myself and another nurse that has given that.

8       Q. Okay. Again, you signed it first there?

9       A. Yes.

10      Q. Does that --

11      A. So presumably, yes, I --

12      Q. Do you remember that?

13      A. I don't remember, but usually whoever signs --

14      Q. Okay.

15      A. The top is the person that has given it.

16      Q. Okay.

17           Then the interview moved on to the parenteral  
18           nutrition form and Lucy Letby described the various  
19           entries and how it would be checked.

20      A. Then when we've done that, we sign with the lipid batch  
21           number and document that here and write the time that  
22           we've commenced it.

23      Q. Okay. When you say "we", is that somebody else's  
24           signature there?

25      A. That's my signature.

1

2

1 Q. Yeah?

2 A. But ideally it should have been co-signed by somebody.

3 Q. Okay.

4 I think this is going back to the prescription form,

5 which had the reference to lipid. If we go back to

6 that, Mr Murphy. The last tile was 213, please. Scroll

7 down a little bit, please. Thank you:

8 Okay, when you say "we", is that somebody else's

9 signature there?

10 A. Yes, that's my signature.

11 Q. Yeah?

12 A. But ideally it should have been co-signed by somebody.

13 Q. Okay. At 00.05, that's your signature?

14 A. Yes.

15 Q. So essentially your signature on there means what with

16 regards to this, that it's you that's check it or you

17 that's administered it?

18 A. That I've checked it.

19 Q. The officers then asked Lucy Letby about the blood gas

20 chart, which is at 232, please, Mr Murphy:

21 Okay, so that's really just a record, isn't it,

22 signed by you and dated?

23 A. It's just -- yes.

24 Q. So what's that, that date there -- sorry, that time,

25 is that a time or a date?

1

2

1 A. 00.51.

2 Q. Time, okay. And again?

3 A. So that I've written there, so this gas was taken during  
4 Neopuffing.

5 Q. Right.

6 A. So the baby was being Neopuffed with a pressure of 30  
7 over 6 in 100% oxygen.

8 Q. Okay. Is that an event there? Is that something  
9 happening that she's being Neopuffed?

10 A. Yes.

11 Q. Lucy Letby was then shown the relevant observations  
12 chart, which is at 237, please, Mr Murphy:

13 What does that say to you?

14 A. So this is an observation chart.

15 Q. Yes.

16 A. So we usually do hourly observations on the babies, so  
17 I've carried out observations at 01.00 hours.

18 Q. Okay.

19 A. So I've documented her heart rate, her respiratory rate,  
20 and when it's a cross it means that it's a ventilator  
21 rate.

22 Q. Lucy Letby then explained the various other entries on  
23 the form. The officer said:

24 Okay.

25 A. I haven't done a temperature at that time because we

1

2

1           don't always do temperatures hourly.

2       Q.    Okay.  Is there a reason [this is where we should  
3           perhaps focus on the form] there's nothing in the column  
4           before apart from the top, that part there, there's no  
5           signatures?  Are you aware of any reason why that would  
6           be?

7       A.    No.

8       Q.    Okay.

9       A.    In this column here --

10      Q.    Yes.

11      A.    -- where it's not signed?  No.

12      Q.    And there's no values in it there -- well, there's  
13           a couple but some are missed off.

14      A.    No.

15      Q.    Okay is there a reason why there you've only got one  
16           signature on that form, Lucy?

17      A.    I can't recall specifically, but sometimes you would do  
18           separate observations -- if the nurse caring for a baby  
19           was on a break you might cover for them or if they were  
20           busy doing something with the baby.  Sometimes another  
21           member of staff would record the observations for them.

22      Q.    Okay.  Do you remember who the designated nurse was for  
23           [Baby B] on this --

24      A.    [Nurse A].

25      Q.    How do you remember that clearly?

1

2

1 A. I don't remember, I can just see from these signatures.

2 Q. From the notes?

3 A. Yes.

4 Q. Okay, and who were you designated nurse for?

5 A. I don't recall.

6 Q. Okay. Well, thank you for that. So on that particular  
7 shift then on 9 June into the 10th, do you -- do you  
8 remember the shift at all?

9 A. Not with any clarity, no.

10 Q. Or any observations that you had with [Baby B] that caused  
11 you concern at all on that shift?

12 A. I do remember that she had some mottling that looked  
13 a little bit similar to [Baby A]'s appearance the day  
14 before.

15 Q. Okay, and how did you become aware of that?

16 A. One of the staff nurses had raised concerns and got the  
17 doctors to review her.

18 Q. Do you remember who that was?

19 A. Who reviewed her medically?

20 Q. Who the staff nurse was.

21 A. I think it was [Nurse A].

22 Q. Okay, and that mottling as you've described it, is it  
23 something you witnessed in [Baby B] yourself?

24 A. Yes.

25 Q. You did? When was that?

1

2

1 A. I don't recall at what point.

2 Q. And the circumstances around you seeing this mottling,  
3 who was there with you at the time?

4 A. I think it was [Nurse A].

5 Q. Okay. Can you describe that mottling? Is it similar to  
6 that with [Baby A] or different?

7 A. I remember -- I think she was more mottled as opposed to  
8 [Baby A] was paler -- [Baby A] was more pale centrally  
9 and --

10 Q. Okay.

11 A. -- mottled peripherally and I think from what I recall  
12 [Baby B] was more mottled and that extended over more of  
13 her body rather than just her limbs.

14 Q. So was it a different colour?

15 A. From what I remember it was just darker than [Baby A]. So  
16 [Baby A] was pale, whereas [Baby B] was more mottled, which  
17 is this sort of purply red --

18 Q. Right, okay.

19 A. -- rash appearance.

20 Q. And any particular shapes to that?

21 A. Well, usually mottling is sort of a patchy round  
22 appearance.

23 Q. So as the experienced nurse you are, what was that  
24 saying to you differently to [Baby A]? You -- what was  
25 going through your mind at the time when you saw this?

1

2

1 A. I don't recall.

2 Q. Okay. When you saw that, did you take any action in the  
3 treatment of [Baby B]?

4 A. Not that I remember, no.

5 Q. Do you recall whether [Baby B] was attached to a monitor  
6 at all?

7 A. I don't recall specifically, but the majority of babies  
8 on the unit are attached to a monitor, so I'd assume  
9 that [Baby B] had been.

10 Q. Do you remember any alarm activation at all from  
11 a monitor?

12 A. No.

13 Q. So you remember seeing this mottled effect on [Baby B],  
14 do you? Do you remember the event that took place just  
15 after midnight? Do you remember what happened to [Baby B]  
16 then?

17 A. No.

18 Q. No? Were you aware later that something had happened to  
19 [Baby B]?

20 A. Yes, I know something happened to [Baby B] but I'm not --  
21 I don't remember specifically at what time or how that  
22 event happened.

23 Q. Okay. I'm just thinking in -- when you witnessed this  
24 mottling effect on [Baby B] whether or not it was shortly  
25 afterwards or before.

1

2

1 A. It was -- it was before any resuscitation was being  
2 performed, I think.

3 Q. Right. Do you remember how long before?

4 A. No.

5 Q. Okay. I take it when a baby is struggling, you know,  
6 the designated nurse would call out for help and  
7 assistance. Am I right in saying that?

8 A. Yes.

9 Q. So in this particular instance, with [Baby B], do you  
10 remember any -- any calls at all from any of the nurses  
11 asking for help or assistance?

12 A. No, I think from memory [Nurse A] alerted me to  
13 the rash -- well, to the mottling appearance. I don't  
14 recall after that how -- who came after that or who  
15 asked for further support.

16 Q. When she alerted you, what were you doing, what had you  
17 been doing just before that?

18 A. I don't recall.

19 Q. Do you remember which baby you were caring for at that  
20 time?

21 A. No.

22 Q. No? Do you remember if you were working in the same  
23 nursery at that time?

24 A. No.

25 Q. Okay. But [Nurse A] (sic) called out to you to see this

1

2

1           particular rash on the baby so --

2       A. I believe so, yes.

3       Q. Okay. So would it be fair to say that you were in the  
4           vicinity of [Nurse A] (sic) or would have -- is it possible  
5           that she could have come to you in another room and  
6           asked?

7       A. It's possible I was either in the room or maybe at the  
8           nurses' station. If somebody shouted from nursery 1 you  
9           would hear them from the nurses' station.

10      Q. Were you involved at all with [Baby B]'s parents? I know  
11           obviously when [Baby A] sadly passed away you were, but  
12           when [Baby B] was struggling, were you involved with the  
13           parents then at all?

14      A. I believe I had conversations with them, but I don't  
15           recall specifics but I do remember seeing the parents.

16      Q. Okay. So it's fair to say then in regards to this  
17           particular episode for [Baby B] that you don't  
18           particularly remember the shift, you remember being  
19           called by [Nurse A] (sic) to have a look at this mottling  
20           on the abdomen of [Baby B], yeah?

21      A. Yes.

22      Q. Do you remember any collapse event?

23      A. I remember her requiring resuscitation, but I don't  
24           recall how -- how that transpired, how it got to that  
25           point --

1

2

1 Q. Right.

2 A. -- or when that happened.

3 Q. But you became aware of that post-event? You weren't  
4 involved with the resuscitation yourself?

5 A. I don't remember my role in the resuscitation, if I did  
6 play a role.

7 Q. Okay.

8                   Then one officer asked the other:

9                   Anything you want to ask?

10                  So the things that we've referred to here, do they  
11                  constitute you giving [Baby B], in some capacity, care?

12 A. Yes, if I delivered a medication.

13 Q. Okay and in -- under what circumstances would that be?

14                  I know you referred to one that may be, maybe it was  
15                  a break. Would that apply to all of them?

16 A. Possibly, or if the nurse caring for that baby is doing  
17                  something else with the baby then other members of staff  
18                  may do their drugs for them or if they are preparing  
19                  drugs --

20 Q. Right.

21 A. -- for another baby anyway. Sometimes that person will  
22                  carry on and do the drugs for --

23 Q. Okay.

24 A. -- that baby.

25 Q. For those ones that we've talked about, do you recall

1           when you had that contact with [Baby B], if you had any  
2           concerns for her?

3       A. I don't recall having any concerns, no.

4       Q. Okay.

5       A. I don't remember specifically the contact but I don't  
6           remember there being any concerns. But I'm not sure at  
7           what point.

8       Q. If you had have had concerns, what would you have done?

9       A. Raised it to the nurse looking after her or the doctors.

10      Q. Okay. And from what you just said, it was [Nurse A] (sic)  
11           potentially that raised the issue with you about the  
12           mottling, it wasn't you that raised it, or you don't  
13           recall?

14      A. I don't recall. I think it was [Nurse A] that alerted me  
15           to it.

16      Q. Okay. What was your understanding of the clinical  
17           position of [Baby B]?

18      A. Prior to this event?

19      Q. Yeah.

20      A. That there hadn't been any undue concerns expressed.

21      Q. And do you remember where [Baby B] was, which nursery  
22           [Baby B] was in?

23      A. Nursery 1.

24      Q. Okay. And you don't remember whether you were working  
25           in there or not?

1

A. No.

2

Q. Right. Did you have cause to handle [Baby B] at all?

3

A. I would have handled her to an extent to give the  
medications and to attach those lines.

4

Q. And then we've summarised that Lucy Letby explained that  
she would not have needed to handle [Baby B] when  
attaching the bag to the long line. She would have gone  
to the baby, together with her colleague who connected  
it to the patient. Lucy Letby was then asked about the  
entry detailing the morphine bolus, which I think we've  
already looked at, at tile 241.

5

A. Okay, so that's the morphine bolus, so that would seem  
that I would have given that to [Baby B].

6

Q. And physically, what do you do?

7

A. Attach the morphine syringe to [Baby B] and give the  
volume. It says IV. I'm not sure which type of access  
[Baby B] had, whether it's a peripheral cannula, a long  
line or a UVC.

8

Q. So that's a physical pressing of a syringe into the baby  
via something?

9

A. Yes.

10

Q. But you can't be sure what that was, what the apparatus  
was?

11

A. I'm not sure which line it was delivered through, no.

12

Q. Okay. So that would be physical contact?

1

2

1 A. Yes, to attach to the line, yes.

2 Q. And who's that there, sorry?

3 A. Mary Griffiths (sic).

4 Q. So would Mary be with you on the signing out and the  
5 administration?

6 A. Yes.

7 Q. Okay.

8           Then Lucy Letby explained that blood would have been  
9           taken by a heel prick from [Baby B], that a doctor would  
10          have been required for any other method:11           At that time then do you remember how [Baby B] -- how  
12          she was presenting?13 A. I don't recall at that time, but looking at this it was  
14          happening during Neopuff, so she was obviously being  
15          Neopuffed by somebody whilst I was taking the blood gas.

16 Q. Right.

17 A. And the blood gases aren't great, so --

18 Q. So does that say to you that's post-collapse?

19 A. Or during, yes.

20 Q. How did that sort of make you feel? You'd been involved  
21          with [Baby A]'s care the day before.22 A. The only concern primarily were the parents and how they  
23          were coping with that. Obviously they'd already lost  
24          [Baby A] and then to have to see [Baby B] go through  
25          resuscitation...

1

2

1 Q. You said you had a bit of contact with the parents  
2 following [Baby B]'s collapse. What was that, can you  
3 remember?

4 A. No, I don't recall specific things, what was said or  
5 anything, no.

6 Q. So were you present at all when [Baby B]'s parents were  
7 asking questions, making requests following [Baby B]'s  
8 collapse?

9 A. Yes, I was there in the nursery with them, yes.

10 Q. Was anyone else there with you?

11 A. I don't recall ever being on my own with them.

12 Q. How come you recall that specifically, being with them  
13 after that in the nursery?

14 A. Because I just remember how upset they were.

15 Q. Right. There's nothing else that sticks in your mind as  
16 a reminder?

17 A. No, I think it's just that they were there again and  
18 saying they didn't want this to happen to [Baby B], what  
19 had happened to [Baby A].

20 Q. You must build up quite a rapport with the parents  
21 through the care of their babies, am I right in saying  
22 that?

23 A. Yes, we get to know some of the parents quite well, yes.

24 Q. Is there anything particular about [Baby A] and [Baby B]'s  
25 parents that warmed you to them?

1

2

1       A. Just I know they'd waited a long time for [Baby A] and  
2                   [Baby B] and that they were much-wanted babies.

3       Q. Who told you that?

4       A. It was known through the handover that we have. So when  
5                   we have nursing handover you have a little bit of  
6                   background as to the parents and the pregnancy and  
7                   things.

8       Q. Does that sort of change the way you deal with them at  
9                   all or affect the way you deal with them?

10      A. No, I'd like to think that you treat all parents the  
11                   same but obviously you just bear in mind what they've  
12                   gone through to get to that -- to get to this point, but  
13                   I think that the care you would give them and their  
14                   babies would be the same as -- as any other parents.

15      Q. And following [Baby B]'s collapse have you kept in touch  
16                   with them at all?

17      A. No.

18      Q. Is that something you have done with other babies?

19      A. No -- that have died?

20      Q. Any of them, you know, treated, cared for. Is that  
21                   a process that you know you would do or not?

22      A. No. I have done with -- there was one or two families  
23                   from Liverpool Women's when I did my placement there.

24      Q. Okay. I've got -- when you gave your first account to  
25                   us you said you think it was [Nurse A] that called for the

1

2

1           doctors. What doctors attended, can you recall?

2       A. No.

3       Q. Okay. So I presume you don't know where they were, if  
4           you don't know who it was that was called?

5       A. No.

6       Q. Okay, thank you. Is there anything else that you would  
7           like to tell us about your care with [Baby B] and that  
8           particular day, that particular episode, anything that  
9           stands out you think, might think would be helpful for  
10           us?

11      A. No, as I say I don't remember specifics with [Baby B].

12      Q. So it's fair to say you were on the periphery of the  
13           care for [Baby B] by the charts that you have signed  
14           and --

15      A. Yes.

16      Q. -- some of the processes that you have undertaken?

17      A. Yes.

18      Q. And it's fair to say you have seen this mottled effect  
19           on the baby but it was highlighted to you by the  
20           designated nurse, [Nuse A] (sic)?

21      A. I believe so, yes.

22      Q. But -- yeah, but you don't specifically remember any,  
23           any collapse event on that particular shift?

24      A. No.

25      Q. Okay, no. We'll end this interview. If we close, it's

1

2

1           3 minutes past midday.

2           So as we did with [Baby A], moving on to the second  
3           occasion when [Baby B] was discussed, this is  
4           11 June 2019. We can see part of an interview that  
5           lasted 51 minutes.

6           A. Yes, that's correct.

7           Q. Thank you:

8           We're going to talk to you about [Baby B] now.

9           And then they continued:

10           In your previous interview you remembered that  
11           [Baby B] needed resuscitation but you could not recall how  
12           that transpired. Do you remember that in your previous  
13           interview?

14           A. Yes.

15           Q. Lucy Letby then confirmed her signature alongside the  
16           TPN bag and lipid syringe at 00.05 hours and that her  
17           signature at 00.15 hours on the blood gas record  
18           suggests that she was involved in [Baby B]'s care over  
19           that period:

20           That was prior to her collapse at 00.30 hours,  
21           [Baby B]'s collapse some minutes later. Do you understand  
22           what we're saying here?

23           A. Yes.

24           Q. Lucy Letby couldn't remember if she was allocated  
25           another baby in nursery 1:

1

2

1           Okay, so we've got the situation here that [Baby B]  
2           collapses and you're there shortly before with the blood  
3           gas record.

4           We just looked at it so I'm not going to go back to  
5           it.

6           A. Can [Nurse A] remember who took the gas?

7           Q. Well, I'm saying to you it is possible that it could  
8           have been you.

9           A. It's possible, but have you asked her who took the gas?

10          Q. Well, I'm asking you if that is you taking the gas.

11          A. I can't guarantee by what's written on there who took --  
12           I've run that gas on the machine and written it down,  
13           I don't know whether I was the one that obtained the  
14           blood or with whether I just ran the gas for her.

15          Q. Lucy Letby was informed of the opinion of the experts as  
16           to [Baby B]'s collapse and was asked:

17           Do you have any explanation, Lucy, for the  
18           dislodgement of [Baby B]'s nasal prongs?

19          A. No, I don't, no, and if we look here she's actually been  
20           weaning off CPAP so I'd be concerned, if she had managed  
21           2.5 hours off CPAP, why dislodged prongs would cause  
22           such a deterioration.

23          Q. So you're saying that's a mistake then?

24          A. What's a mistake?

25          Q. That the nasal prongs were dislodged for that length of

1

2

1 time.

2 A. No, I'm not saying that they weren't, I'm just saying  
3 that she had previously managed 2.5 hours off CPAP, so I  
4 would be concerned, if they were dislodged for few  
5 minutes, why she would suddenly deteriorate.

6 Q. Did you inject into [Baby B]'s long line at the time the  
7 TPN bag was being connected?

8 A. No.

9 Q. Is there anything you want to say regarding [Baby B]?

10 A. Yeah, I didn't -- I didn't do anything deliberately to  
11 [Baby B] to harm her.

12 Q. Okay. Are you responsible for attempted murder, Lucy?

13 A. No.

14 Q. Then the interview was stopped.

15 The third and final interview in respect of  
16 [Baby B] took place on 10 November 2020.

17 A. Yes, that's correct.

18 Q. It begins:

19 Okay, so we'll move on to talk about [Baby B], Lucy.

20 They summarise the previous interviews concerning  
21 [Baby B] and ask:

22 [Baby B] collapsed. Do you have any explanation for  
23 that?

24 A. No, there's no explanation.

25 Q. Okay. Is there anything else you wish to add?

1

2

1 A. No.

2 Q. Okay. When I did the introduction to the interview,  
3 Lucy, I said to you that we would be speaking to you  
4 about messages recovered from your mobile phone that was  
5 taken from you when you were last arrested.6 Just pausing there, we've touched on the phones  
7 already, but on the first occasion of arrest  
8 in July 2018, that's the phone that was seized by the  
9 police; is that right?

10 A. Yes, that's right.

11 Q. That's the phone that's given rise to the analysis and  
12 the contents that we have seen in a number of sequence  
13 of events charts?

14 A. Yes.

15 Q. Thank you:

16 So on 30 June 2015, at 21.49, [Nurse A] sent you  
17 a message that said:18 "Yeah, there's something odd about that night and  
19 the other three that went so suddenly."

20 You immediately replied saying:

21 "What do you mean?"

22 You then said:

23 "Odd that we lost three in different circumstances?"

24 Do you recall that conversation?

25 A. No, not really, no.

1

2

1       Q. Okay, well, we'll just move on. Okay. [Nurse A] replied  
2       saying:

3                "I don't know. Were they different?"

4                And she says:

5                "Ignore me, I'm speculating."

6                You then respond to [Nurse A], saying:

7                "Well, [Baby C] was tiny, obviously compromised in the  
8        uterus. [Baby D] septic. It's [Baby A] I can't get my head  
9        around."

10               So my colleague's just asked you, do you recall  
11        having that conversation?

12        A. No.

13        Q. Why did you respond asking her what did she mean?

14        A. I don't recall this conversation other than obviously  
15        reading it there now. I think I'm asking what does she  
16        mean that there is something odd.

17        Q. Okay. She said that it was odd that you lost three  
18        different babies in different circumstances and you  
19        questioned whether they were different. What did you  
20        mean by that?

21        A. I'm not sure.

22        Q. Okay. She said to you that she was speculating. Do you  
23        know what the speculation was about?

24        A. No.

25        Q. So in response to her message, you responded that:

1

2

1                   "Obviously [Baby C] was tiny, compromised in the utero  
2 (sic)."

3                   As way of an explanation. Tell me what you meant by  
4 that?

5     A. That I said that [Baby C] was tiny?

6     Q. Yes. "Compromised in the utero" (sic), what did you  
7 mean by that?

8     A. That he was a baby that was born prematurely and unwell  
9 at the time.

10    Q. Okay. So "compromised in the utero" (sic) is that your  
11 explanation for that terminology given?

12    A. Yeah, so he'd had all nutrients and hadn't grown as well  
13 as what we'd expect.

14    Q. And you said that you "couldn't get your head around  
15 [Baby A]". What was it that you couldn't get your head  
16 around?

17    A. I don't recall saying that. I -- I can't comment.

18    Q. That concludes those interviews in respect of [Baby B]?

19    A. Yes, that's right.

20    Q. Moving on then, please, to [Baby C], who we have  
21 just touched upon in that last interview. The first  
22 interview in respect of [Baby C], 4 July again, 2018.

23    A. Yes, that's correct.

24    Q. We can see the interview began with introductions and  
25 caution.

1

2

1 A. Yes.

2 Q. Ms Letby replied "yes":

3 We're going to talk about [Baby C]. At  
4 15.31 hours on 10 June 2015, [Baby C] was born to  
5 [Parents of Baby C] at 800 grams, and [Baby C]  
6 was transferred to the neonatal ward. [Baby C]  
7 died at 05.58 hours on 14 June 2015. Do you remember  
8 [Baby C]?

9 A. Yes.

10 Q. Did you have an involvement with the care of  
11 [Baby C]?

12 A. Just with his resuscitation from what I remember.

13 Q. Okay. Can you explain to us what your involvement was  
14 then, please?

15 A. I'm not sure what my exact role was but I remember him  
16 requiring resuscitation.

17 Q. Okay.

18 A. I remember that he'd not long had his first feed by one  
19 of the nurses and it wasn't long after that that he  
20 deteriorated, so I'm not sure what my role was with him  
21 in that resuscitation. I think I did chest  
22 compressions. I remember we waited for the vicar to  
23 call and we carried on resuscitation efforts until the  
24 vicar arrived. And then we withdrew care and [Baby C]  
25 lived for several hours after that, around in the

1

2

1           parents' accommodation.

2       Q.    Okay.  Are you aware of why he required resuscitation?

3       A.    No, I don't recall the events leading up to that I just

4           know that he had resuscitation.

5       Q.    So you're not aware of what the circumstances of his

6           collapse were?

7       A.    No.

8       Q.    Had you had contact with him up to that point?

9       A.    Not that I recall, no.

10      Q.    So in terms of that day in particular, do you know who

11           his designated nurse was?

12      A.    Sophie Ellis.

13      Q.    What kind of time of day was this?

14      A.    Nights.  It was on nights.

15      Q.    Your nights?

16      A.    Yeah.

17      Q.    And who were you designated nurse for?

18      A.    I don't remember.

19      Q.    So when did you first become aware of this requirement

20           to resuscitate [Baby C]?

21      A.    I don't remember.

22      Q.    Was it something that you discovered, for example, or

23           was it something you were alerted to and you reacted to?

24      A.    I don't think I discovered it.  I think I became a part  
25           of it afterwards.

1

2

1 Q. Okay.

2 A. I think I'd been asked to help.

3 Q. You say you don't think, is that because you don't  
4 remember?

5 A. I don't remember.

6 Q. Okay. So you said that whatever the event was, you said  
7 that it happened shortly after his first feed. Was that  
8 his first feed ever or his first feed on that shift?

9 A. No, I think from memory it was his first feed ever.

10 Q. Okay, so tell me about what happens with a baby's first  
11 feed.

12 A. So the doctors will tell you that they're happy for  
13 a baby to commence feeds and they will be fed via the  
14 nasogastric tube.

15 Q. Can you remember the feeding method specifically with  
16 regards to [Baby C]?

17 A. I don't know what he was fed. I believe it was  
18 nasogastric, but we wouldn't feed him any other way.

19 Q. Right, okay. But do you remember that specifically,  
20 when you were in resus with him?

21 A. No, not giving the feed, no.

22 Q. Okay. Were you involved with that first feed at all?

23 A. Not that I remember.

24 Q. Okay. Any care of him at all other than resus?

25 A. Not that I remember.

1

2

1       Q. So in terms of your role within the resus of him, tell  
2                    us exactly what you did.

3       A. I think I did chest compressions but I don't know for  
4                    certain.

5       Q. What makes you say that you think you did chest  
6                    compressions?

7       A. Because I don't recall doing any drugs for him.  
8                    I wouldn't have the airway because the doctors usually  
9                    have the airway, so I think if I was involved then  
10                   I would -- the other role would have been chest  
11                   compressions.

12      Q. How do you remember that you took part in his  
13                   resuscitation?

14      A. Because I can remember the family and the staff being  
15                   there around [Baby C].

16      Q. Okay, so tell us about that then.

17      A. I believe it was -- Dr Gibbs, the consultant, was there  
18                   and mum came and I think dad was at home and he had to  
19                   come into the hospital and, as I say, they requested for  
20                   [Baby C] to be baptised and there was a little bit of  
21                   a delay in getting the vicar, so we carried on with the  
22                   resuscitation efforts until the vicar could come to  
23                   baptise him.

24      Q. But what else? Is there anything else that makes you  
25                   remember him specifically in the circumstances?

1

2

1 A. I just remember him because he was a small baby.

2 Q. Do you remember which nursery he was in?

### 3 A. Nursery 1.

4 Q. So tell us about the other members of staff that were  
5 treating him during the resus during your contact with  
6 him?

7 A. I think Sophie Ellis was there.

8 Q. Yes?

9 A. I think Dr Gibbs was the consultant and I think it was  
10 Melanie Taylor and [Nurse B] that were the  
11 band 6s. And I don't think I remember anyone else.

12 Q. Lucy Letby then described the different roles undertaken  
13 during the course of a resuscitation and was asked:

14 What would happen with the resus notes?

15 A. So they're usually just written down in rough and  
16 then --

17 Q. Yes?

18 A. -- they're transferred into the medical notes.

19 0. What happens to the rough notes?

20 A. They will be disposed of.

21 Q. Just prior to the collapse, Lucy, had you any cause to  
22 go into nursery 1 at all?

23 A. I don't remember.

24 Q. Were you working in nursery 1?

25 A. I don't think I was, but I don't recall which baby I was

1

2

1                   looking after.

2       Q.    Okay.  And you don't remember the process of how you  
3                   ended up in nursery 1 with the resus?

4       A.    No.

5       Q.    You've then said that [Baby C], you understood, after the  
6                   first feed, had suffered a deterioration.  Do you  
7                   remember what that deterioration was?

8       A.    I think he dropped his oxygen levels.

9       Q.    Right, okay.  So you think or you know that he dropped  
10                  his respiratory --

11      A.    I think.

12      Q.    Is that from memory?

13      A.    Yes.

14      Q.    How would you become aware of that then, Lucy?

15      A.    Either somebody alerted me or his monitor would alarm.

16      Q.    Right.  Do you remember somebody alerting you about  
17                  that?

18      A.    I don't remember.

19      Q.    Lucy Letby then explained that during resuscitation  
20                  there had been a delay while the vicar attended to  
21                  baptise [Baby C]:

22                   Right, you mean you mentioned about the parents  
23                  being there.  Were they there when you first arrived or  
24                  did they come --

25      A.    No, I think mum came after and then dad was a little

1

2

1           while after that.

2       Q.    Okay.

3       A.    Because I think mum was resident upstairs on the ward so  
4           she came quite quickly but I think dad was at home.

5       Q.    And you don't remember if anyone else was giving  
6           resuscitation to him?

7       A.    Not that I remember, no.

8       Q.    Lucy Letby was asked about the decision to cease  
9           resuscitation:

10           Right, and who has the -- well, makes the final  
11           decision?

12       A.    The consultant.

13       Q.    And that was Dr Gibbs, was it?

14       A.    Yes.

15       Q.    Okay. You say that then you withdrew care and [Baby C]  
16           was with his parents for several hours. Did you have --  
17           apart from the resus did you have any interaction with  
18           them following that?

19       A.    Yes, I think I checked a dose of morphine because he was  
20           having morphine around the parents' accommodation.

21       Q.    So the care essentially carries on, does it?

22       A.    He wasn't receiving active treatment, he was just having  
23           morphine for pain relief.

24       Q.    Yes.

25       A.    He wasn't having any other, you know, respiratory

1

2

1 support or anything like that --

2 Q. Okay.

3 A. -- but he was having the morphine.

4 Q. And what was your knowledge of [Baby C]'s clinical  
5 position, obviously prior to the deterioration?

6 A. I don't really recall.

7 Q. Okay. Just a couple of questions. Did you have cause  
8 to alter or deal with [Baby C]'s equipment that was  
9 attached to him at all?

10 A. No.

11 Q. Or handle [Baby C] in any way? Did you have a need to  
12 handle him?

13 A. I don't recall handling [Baby C]. I would have done to  
14 assist with the resuscitation. I don't recall handling  
15 him beforehand.

16 Q. When you came on duty, Lucy, you have told us that  
17 Sophie was the designated nurse for [Baby C]. Do you  
18 recall who you were working with on that day?

19 A. No.

20 Q. Do you know if you were asked to look after any baby  
21 whilst a nurse was on her break at all, in particular  
22 [Baby C]?

23 A. Not that I recall.

24 Q. Do you remember whereabouts in nursery 1 [Baby C] was?

25 A. Yes.

1

2

1 Q. Then Lucy Letby was able to mark on a plan where [Baby C]  
2 had been situated:

3 In relation to [Baby C]'s parents, did you have any  
4 contact with them at all? I know they were there when  
5 [Baby C] collapsed. Any other sort of contact with them  
6 at all?

7 A. Obviously I know I went to [Baby C] when he was around  
8 in the family room with mum and dad.

9 Q. Right, okay.

10 A. So I would have had some interaction with them then.

11 Q. Any prior to the collapse?

12 A. Not that I remember.

13 Q. Okay. Again, I know it's another difficult time for  
14 you, Lucy, but how did you deal with that? How did you  
15 feel after looking after [Baby C]?

16 A. I found [Baby C]'s quite hard because of the fact that he  
17 did live for several hours afterwards, which I hadn't  
18 seen before. A baby sort of gasping in the parents'  
19 room like that, and then Sophie was particularly upset.  
20 I think it had been her first death as well and she was  
21 quite upset about it.

22 Q. And following [Baby C]'s death, do you -- were you  
23 involved with moving (sic) any of the equipment from him  
24 at all?

25 A. Not that I remember.

1

2

1 Q. Was there any particular task that you were involved  
2 with after [Baby C]'s death?

3 A. As I say, I think I checked some morphine, but I don't  
4 recall anything, any other role.

5 Q. Okay. You talked about the memory box previously on the  
6 babies. Were you involved with that at all?

7 A. I don't remember. I think I may have done hand and  
8 footprints, but I can't remember specifically.

9 Q. Would there be a reason why you've done that? You  
10 weren't the designated nurse, were you, for [Baby C]?

11 A. No, I don't know whether I helped Sophie with them.

12 Q. Okay.

13 A. I can't remember for definite. I have a vague  
14 recollection of doing them whilst he was sat with mum  
15 and dad, but I can't remember for certain.

16 Q. What about giving [Baby C] a bath? Did you do anything  
17 like that?

18 A. I don't remember.

19 Q. No? Were you involved at all with the post-mortem  
20 arrangements for [Baby C]?

21 A. No.

22 Q. And I take it you didn't have any contact with the  
23 family afterwards following that?

24 A. No.

25 Q. What about a debrief? Were you involved in a debrief?

1                   Do you recall a debrief for [Baby C]?

2       A. I don't recall a debrief, no.

3       Q. Again, you know, we talked about how you were dealing  
4                   with these situations. Do you remember specifically  
5                   with [Baby C] how you -- I don't know whether you spoke to  
6                   any of your friends or family to try and ease your mind.

7       A. I know Sophie and I had quite a long conversation.

8                   Sophie and I were both living in the same area at the  
9                   time, in nursing accommodation, and we had quite  
10                  a lengthy conversation about it. And the girls that  
11                  were on shift that night, we spoke about it. I don't  
12                  recall who else I told specifically.

13       Q. Okay. Is there anything else you can help us with  
14                  regarding [Baby C]?

15       A. No, I don't think so.

16       Q. At that stage the interview regarding [Baby C]  
17                  came to an end.

18       A. Yes, that's correct.

19       Q. Thank you. Moving on, please, to the next interview.  
20                  The second interview.

21       MR JUSTICE GOSS: We'll just do this one and then we'll have  
22                  the break. I know there is a third one, but the print  
23                  is smaller on this one, it'll take a bit longer.

24       MR ASTBURY: Very good.

25                   We move on to 11 July 2019 and we can see this is

1

2

1 part of a longer interview:

2 Lucy [it begins] I now want to talk to you about  
3 [Baby C]. Are you okay to carry on?

4 A. Yes.

5 Q. Then the officers interviewing summarised the previous  
6 interview concerning [Baby C] and Lucy Letby was asked:

7 Okay, Nurse Sophie Ellis has been spoken to, Lucy.

8 She was out of the room at the nurses' station when  
9 [Baby C]'s alarm sounded. She says that you had your own  
10 designated baby who was in nursery 3. Do you agree with  
11 that?

12 A. No, as I've said before I don't remember who I was  
13 looking after on that shift. I would have to look and  
14 check.

15 Q. She goes on to say that when she was -- went into  
16 nursery 1 in response to the alarms, she says that  
17 you were standing next to [Baby C]'s cot as she entered.  
18 Do you agree with that?

19 A. I don't remember specifically when I entered the room or  
20 why I entered the room.

21 Q. Nurse Sophie Ellis says that you said, "He's just  
22 dropped his HR in saturations" (sic), or something  
23 similar. Do you recall saying that to Sophie Ellis?

24 A. No.

25 Q. You were placed into nursery 3 during this shift and had

1

2

1       your own designated baby to look after; do you agree  
2       with this?

3       A. Not from memory. I'd have to check. If that's  
4       documented as being right then yes, it would of (sic).  
5       I don't remember.

6       Q. Okay, Lucy, have you got any explanation as to why you  
7       were already in nursery 1 when [Baby C]'s alarms were  
8       sounding?

9       A. I don't recall from memory. I may have been in there  
10      doing the checks that we do in the ITU room, I may have  
11      been getting a drug out of the cupboard, might have been  
12      using the computer. I might have heard his alarms,  
13      I don't -- I don't recall.

14      Q. Okay. What checks are they, Lucy?

15      A. There's the resus trolley that's in the room and the ITU  
16      spaces were all checked each evening.

17      Q. Would you do all that whilst caring for other babies  
18      then?

19      A. Yes.

20      Q. Had you been treating [Baby C] at this time, Lucy?

21      A. Not that I remember.

22      Q. Have you got any explanation as to why you were stood at  
23      [Baby C]'s cot side as Sophie Ellis has told us?

24      A. No. As I say, not from memory. I don't recall why  
25      specifically I was there.

1

2

1 Q. The comments that you've made to her, "He's just dropped  
2 his HR and saturations", or something similar to that.  
3 Have you got any explanation as to why you made that  
4 comment to Sophie?

5 A. That's what I must have witnessed alarming on the alarm  
6 and that's when she come in -- sorry, that's when she's  
7 come.

8 Q. You have got no explanation as to why you're in  
9 nursery 1?

10 A. No. As I said, I don't recall.

11 Q. And then the next part of the interview is summarised.  
12 The views expressed by Dr Evans and other clinicians  
13 concerning [Baby C]'s collapse were summarised.

14 Lucy Letby agreed that [Baby C] was stable prior to his  
15 collapse. Lucy Letby was asked about messaging,  
16 downloaded from her mobile telephone. If I can ask,  
17 please, Mr Murphy to go to tile 147 to begin with.

18 Lucy Letby was asked:

19 So this is a conversation between you and Jen. Who  
20 would Jen be?

21 A. Jen is a nursery nurse on the unit, used to be.

22 Q. What's Jenny's surname, Lucy?

23 A. Jones.

24 Q. Okay. So you said there:

25 "I just keep thinking about Mon."

1

2

1           I presume there you're saying Monday. I feel I need  
2 to be in 1.

3           I think this is the next message, please, Mr Murphy.

4           If I simply read the messages.

5    MR JUSTICE GOSS: I think read the messages and just let  
6           Mr Murphy go along as best he can. Otherwise -- you  
7           interrupted that message. Go back to it:

8           "'I just keep thinking about Mon.' I presume you're  
9           saying Monday."

10           Then carry on from there.

11    MR ASTBURY: The jury will see that the tile numbers are  
12           there if they want to cross-reference.

13    MR JUSTICE GOSS: Exactly.

14    MR ASTBURY: "I feel I need to be in 1 to overcome it but  
15           [Nurse B] said no."

16           Jen's then responded minutes later:

17           "I agree with her. Don't think it will help. You  
18           need a break from full-on IT. U you have to let it go  
19           or it will eat you up. I know not easy and will take  
20           time."

21           Do you recall that conversation, Lucy, that you had  
22           with Jen?

23    A. No.

24    Q. Can you tell me where you were when it took place?

25    A. No, I don't remember the conversation.

1

2

1 Q. What do the messages relate to?

2 A. I don't remember.

3 Q. What is it that you felt like you needed to overcome,

4 Lucy?

5 A. I'm assuming it's this, I'd had a previous bad  
6 experience in 1, I don't know what date.

7 Q. Okay. So this is 13 June, right?

8 Then Lucy Letby confirmed that with that date in  
9 mind, [Baby A] had died on 8 June 2015 and was  
10 asked:

11 Is that what you could have been referring to, Lucy?

12 A. Possibly, yes.

13 Q. You then went on to say to Jen:

14 "Not the vented baby necessarily, I just feel I need  
15 to be in 1 to get the image out of my head. Mel said  
16 the same and [Nurse B] let her go. Being in 3 is eating  
17 me up. All I can see is him in 1."

18 You've then gone on to say:

19 "It probably sounds odd but it's how I feel."

20 Jen replied:

21 "Well it's up to you but don't think it's going to  
22 help. It sounds very odd and I would be complete  
23 opposite. I can understand [Nurse B]. She's trying to  
24 look after you all."

25 Lucy Letby was then asked:

1

2

1                   Describe the image that you're referring to there,  
2                   Lucy.

3           A. I think it's the image of [Baby A].

4           Q. Okay. What do you mean by "eating you up"?

5           A. It's very difficult. Whenever you see a dead baby, it's  
6           very hard to get that image out of your head.

7           Q. And explain to me why being in nursery 1 is going to  
8           help you deal with that image?

9           A. Because I would see different babies in there, it'd be  
10           a different scenario to the scenario that I had that  
11           time when he died.

12           Q. How do you know it's going to be a different scenario?

13           A. Well, if it's a different baby, it's different staff,  
14           it's a different night.

15           Q. You then went on to say:

16                   "Well that's how I feel and when I've experienced it  
17           at the Women's, I have needed to go straight back and  
18           have a sick baby, otherwise the image of the one you  
19           lost never goes. Why send Mel if she's trying to look  
20           after us? She was in bits over it. Don't expect people  
21           to understand but I know how I feel and how I've dealt  
22           with it before. I've voiced that so I can't do any  
23           more. People should respect that."

24                   Asked:

25                   When you say the image, how did it help it

1

2

1                   disappear?

2       A. How did what help?

3       Q. The image. You've said:

4                   "I needed to go straight back and have a sick baby  
5                   otherwise the image of the one you lost never goes."

6       A. Because I think when you go to the same incubator space  
7                   and there's a different baby in there you sort of kind  
8                   of let that other baby go. Until you go into the space  
9                   you just always see that baby until there's another baby  
10                  there.

11      Q. So is it the same space or the same nursery?

12      A. Um, both, really.

13      Q. And you've said that -- you've voiced it:

14                   "I've voiced it so I can't do any more. People  
15                  should respect that."

16                   Who did you voice it to, Lucy?

17      A. I don't remember from memory. I'm assuming from reading  
18                  that it was [Nurse B].

19      Q. Okay. At 23.01, you then went on to send a further text  
20                  to Jen:

21                   "Women's can be awful but I learnt the hard way  
22                  you have to speak up to get support. I lost a baby one  
23                  day and a few hours later was given another dying baby  
24                  just born in the same cot space. The girls there said  
25                  it was important to overcome the image. It was awful.

1

2

1       By the end of the day I realised -- I realised they were  
2       right."

3            Which baby were you referring to there, Lucy?

4       A. I don't remember.

5       Q. You then went on to say to Jen:

6            "Anyway, forget it. I can only talk about it  
7       properly with those who knew him and Mel not interested  
8       so I'll overcome it myself. You get some sleep."

9            Jen's then responded to you, Lucy, saying:

10            "That's a bit mean, isn't it? Don't have to know  
11       him to understand. We have all been there."

12            You have then gone on:

13            "I don't mean it like that. Just that only those  
14       who saw him know what image I have in my head. Forget  
15       it. I'm obviously making more of it than I should."

16            How did you feel at the time, Lucy, when (sic) Jen's  
17       response to what you were trying to tell her?

18       A. Frustrated.

19       Q. Mm-hm. Is it fair to say that it appears that Jen  
20       didn't understand how you were feeling at this time?

21       A. Yeah.

22       Q. And from looking at those messages and reading them, it  
23       appears that towards the end of the communication you're  
24       upset by the tone of Jen's messages. Is that how  
25       you were feeling?

2

1 A. Yeah -- well, I -- I can't remember specifically, but  
2 I think I just felt that we weren't really getting  
3 anywhere with the conversation.

4 Q. Okay. Is it not the compassionate response that you  
5 were maybe expecting from her?

6 A. Yeah.

7 Q. Okay. At 23.09, Lucy, is when you sent the final  
8 message, that final message, to Jen on that shift, on  
9 that day, 13 June, 23.09. And it was a night shift as  
10 you've already confirmed in your previous interview.

11 Where were you when you sent that message to her?

12 A. I don't remember.

13 Q. Do you agree that you were at work?

14 A. I don't -- was I on shift that day?

15 Q. Sorry [says the officer] and also in those text  
16 messages, Lucy, at 21.55, you've actually said, "Being  
17 in 3 is eating me up". So would that suggest that you  
18 were on the unit at that time at 21.55?

19 A. I'm at work, yes.

20 Q. Yes.

21 A. Yeah.

22 Q. And "being in 3" would suggest that you're working in  
23 nursery 3?

24 A. Yes.

25 Q. Okay. Sorry. No, so where would you be then, using

1

2

1       your mobile phone on the unit when you were working,  
2       Lucy?

3       A. I don't recall specifically on that occasion. On nights  
4       we quite often have our phones out at the nurses'  
5       station.

6       Q. Okay. I'll just tell you something, Lucy, that might  
7       help you. So you sent that final text to Jen at 23.09  
8       and [Baby C] collapsed at 23.15.

9       A. Right.

10      Q. So 6 minutes after you sent that message, [Baby C]  
11       has collapsed.

12      A. Right.

13      Q. What are your thoughts on that?

14      A. I don't have any thoughts on that.

15      Q. So you sent a text to Jen at 23.09, [Baby C]'s alarm has  
16       then sounded, Sophie Ellis has seen you at his cot side,  
17       and he collapsed at 23.15 hours.

18      A. Right.

19      Q. What are your thoughts on that?

20      A. I don't recall where I was at that time that I sent that  
21       text. I might have been at the nurses' station and then  
22       I've gone into nursery 1 to do something else.

23      Q. Mm-hm. The text messages suggest that you were  
24       frustrated, Lucy, that you weren't working in nursery 1.  
25       Do you agree? I'll just remind you what you said

1

2

1           there --

2       A. Yes. I think I felt that it would help if I could have  
3           been in nursery 1.

4       Q. "I just feel I need to be in 1 to get the image out of  
5           my head. Being in 3 is eating me up. All I can see is  
6           him in 1."

7           Yeah?

8       A. Yes.

9       Q. And within 6 minutes, as my colleague said, you were in  
10           nursery 1?

11      A. Yeah.

12      Q. Do you agree with that, Lucy?

13      A. Yes.

14      Q. And within them 6 minutes, [Baby C]'s collapsed?

15      A. Yes.

16      Q. Did you cause [Baby C] to collapse, Lucy, when you went  
17           into him 6 minutes after that conversation?

18      A. No.

19      Q. You were the only staff member in the nursery at the  
20           time [Baby C] collapsed as well, weren't you?

21      A. Yes.

22      Q. Yeah. And you were seen at his cot side when his alarm  
23           sounded, weren't you?

24      A. Yeah.

25      Q. And at that time you were feeling frustrated and upset,

1 which we've gone through, by the tone of your messages;  
2 do you agree with that?

3                   A.    Yes.

4 Q. You've then gone on to attack [Baby C]?

5 A. No, I haven't, no.

6 Q. Lucy, did you murder [Baby C]?

7 A. No.

8 Q. Can you give us any explanation, Lucy, as to how  
9 [Baby C] died?

10 A. No.

11 Q. I think we'll bring the interview to a close at that  
12 point. It is 18.35 and the interview is now stopped.

13 MR JUSTICE GOSS: Mr Myers?

14 MR MYERS: May I make one amendment to something that I said  
15 earlier while it's fresh, just for the purposes of  
16 clarification. When Professor Arthurs was giving  
17 evidence, I referred to the timing of the radiographs,  
18 the 05.05 and 11.58, and said it was with Dr Gibbs  
19 possibly that we'd established the timing. In fact, I'm  
20 grateful for the assistance I've received, it was with  
21 [Dr A] that we saw the timing and it was confirmed  
22 with him, in fact in re-examination, that in all  
23 probability it appears that 5.05 is the pm and 11.58 is  
24 am. So they were that way round.

25 I can give your Lordship the reference to that if it

1           assists, but just to be clear it was [Dr A] that was  
2           dealt with, not Dr Gibbs.

3 MR JUSTICE GOSS: Thank you very much. I have a vague  
4 recollection of a doctor dealing with it, but I couldn't  
5 remember the identity of the doctor. It's a long time  
6 ago.

7 MR MYERS: I was grateful to be reminded as well, thank you.

8 MR JUSTICE GOSS: All right. We'll have a ten-minute break  
9 then, please, members of the jury, as usual, and then  
10 continue with the interviews. You'll appreciate this is  
11 going to take well beyond today going through these  
12 interviews. We'll have another break this afternoon as  
13 well.

14 (12.02 pm)

15 (A short break)

16 (12.12 pm)

17 MR ASTBURY: Officer, if we can move on to the third  
18 occasion, please, upon which Lucy Letby was interviewed  
19 about [Baby C]. If we're all in the right place,  
20 it should be [document redacted] in the top right-hand  
21 corner, please, behind divider 3.

22 We can see the date again, 10 November 2020. The  
23 names of those present. This section of the interview  
24 begins:

25                    *Okay, Lucy, we're going to move on to*

1

2

1 [Baby C].

2                   The officers summarised previous interviews

3                   regarding [Baby C]. Lucy Letby was asked:

4                   Is there anything you want to add regarding [Baby C]  
5                   before we move on, Lucy?

6                   A. No.

7                   Q. Okay. Dr Katherine Davis states that she tried to  
8                   intubate [Baby C] on three occasions, which were  
9                   unsuccessful, and she noted that [Baby C]'s vocal cords  
10                  were swollen and blocking the route and was therefore  
11                  unable to complete the procedure. Have you got any  
12                  explanation for the trauma to [Baby C]'s airway?

13                  A. No.

14                  Q. Did you cause that injury, Lucy?

15                  A. No.

16                  Q. [Father of Baby C] is the father of [Baby C] and he  
17                  states that whilst [Baby C] was dying in one of the  
18                  nurseries, the nurses said to him words similar to:

19                   "You have said your goodbyes now. Do you want to  
20                   put him in here?"

21                   Referring to a basket. He described how the  
22                  comments shook him and upset his wife [Mother of Baby C]  
23                  as [Baby C] hadn't died yet. Do you remember making that  
24                  comment, Lucy?

25                  A. No. Was it myself that said it? I... I...

1

2

1 Q. So if it wasn't you, do you remember who it might have  
2 been?

3 A. No, I don't recall that conversation.

4 Q. "Do you want to put him in here?", referring to  
5 a basket?

6 A. It was -- it was a basket that they -- sorry, it was  
7 a basket that they go in, that they go and take round  
8 into the family room, so that they can have time with  
9 the baby, but we weren't taking [Baby C] away or anything  
10 in the basket.

11 Q. The parents obviously found the comment very upsetting  
12 at that time.

13 A. Yeah, yeah, that's very sad.

14 Q. You don't recall saying it?

15 A. No.

16 Q. [Nurse B], she said she was the nurse in  
17 charge at the time [Baby C] passed away and she gave the  
18 aftercare duties with the parents to Melanie Taylor. Do  
19 you know Melanie Taylor?

20 A. Yes.

21 Q. She said she tried to send you back to JE [we've changed  
22 that to the initials, the baby is named in the  
23 interview].

24 A. Yes.

25 Q. But for these purposes:

1                   She said she tried to send you back to JE, who you  
2                   were responsible for in nursery 3. However, you kept  
3                   trying to help Melanie. Is this true? Do you remember  
4                   that?

5                   A. No, I can't remember.

6                   Q. Why would you want to help Melanie when you had your own  
7                   baby to care for, Lucy, if what [Nurse B] is saying is  
8                   correct?

9                   A. Because as a unit we usually pull together and try and  
10                   support each other on something like that.

11                  Q. When the nurse in charge asks you to do something,  
12                   wouldn't you do it?

13                  A. Yeah. I don't recall that I didn't.

14                  Q. Okay.

15                  A. But I, you know, didn't care for my patient [as read].

16                  Q. So in relation to social media, Lucy, as I've just  
17                   informed you, [Baby C] was born on 10 June 2015  
18                   and he died on 14 June 2015. On 14 June, at  
19                   15.52 hours, you searched for both [Father of Baby C]  
20                   and for [Mother of Baby C]. Do you remember making those  
21                   searches on Facebook?

22                  A. No.

23                  Q. Why would you have done these searches, Lucy?

24                  A. I'm not sure.

25                  Q. Is there anything you wish to add regarding this?

1

2

1 A. No.

2 Q. So as we said, [Baby C] was born on 10 June, died on  
3 14 June, Lucy. I want to talk to you about the messages  
4 on your phone again.

5 That's the exhibit reference for the download for  
6 the phone, JD-13.

7 A. Yes.

8 Q. What nursery was [Baby C] in on the night of the 13th, do  
9 you remember?

10 A. Nursery 1.

11 Q. Prior to [Baby C] collapsing at 23.15 on the 13th, you  
12 were messaging Jen on WhatsApp, which started around  
13 21.30 hours. There were 21 messages, messages between  
14 you, which both stopped at 23.09 hours. 21 messages in  
15 total. And you said [at tile 149] you needed to be in  
16 nursery 1 to get the image of the baby on Monday out of  
17 your head. You said that Mel had asked to move into  
18 nursery 1 and [Nurse B] had allowed her. Had you asked to  
19 move too into that nursery to care for --

20 A. I don't remember.

21 Q. Did Mel not allow you to move?

22 A. I don't remember.

23 Q. You said in one of the messages:

24 "From when (sic) I've experienced it at Women's I've  
25 needed to go straight back and have a sick baby,

1

2

1                   otherwise the image of the one you've lost never goes."

2                   I question the fact Mel would not let you go into  
3                   number 1. Do you remember saying that, Lucy?

4                   A. I can remember that. I don't remember the whole thing  
5                   about where I was and what I'd asked Mel to do, but I do  
6                   remember the -- above the -- that I mentioned the baby  
7                   and needing to be in ITU, yeah.

8                   Q. So if you wanted to get into nursery 1, how did you feel  
9                   about not being allowed into nursery 1?

10                  A. I don't remember specifically. It's just something that  
11                  when you experience being with a sick baby, me  
12                  personally, to then go into another nursery and have  
13                  special care babies, it makes it very hard again to go  
14                  back into an ITU environment, so I prefer to sort of go  
15                  straight back into it.

16                  Q. And that really concludes what was said in that third  
17                  interview in respect of [Baby C]?

18                  A. Yes.

19                  Q. Thank you.

20                   Moving on next, please, to [Baby D]. The first  
21                  interview concerning [Baby D], as we can see on the next  
22                  page, divider [redacted], took place on 4 July 2018; is  
23                  that right?

24                  A. Yes.

25                  Q. We can see the times of the interview and the persons

1 present again. If we go to the text, the interview had  
2 commenced with [Baby C], so it's a follow-on from  
3 that first interview concerning [Baby C]?

4 A. Yes, that's right.

5 Q. Okay [said the officer], I shall move on. We're going  
6 to talk about [Baby D]. At 16.01 hours on  
7 20 June 2015...

8 And the officers then summarised what happened to  
9 [Baby D] on the NNU and the suggestion of skin  
10 discolouration leading to her death on 22 June 2015:

11 Do you remember [Baby D] at all?

12 A. No.

13 Q. Lucy Letby confirmed that she received a copy of the  
14 relevant notes. She was shown the neonatal infusion  
15 chart and the entry at 02.40 hours on 22 June. The  
16 reference there, my Lord, is to tile 227 if anyone wants  
17 to look. She confirmed the signatures were hers and  
18 Caroline Oakley's.

19 Lucy Letby was also shown the neonatal prescription  
20 chart, which appears at tile 237, and confirmed the same  
21 signatures, hers and Caroline Oakley's, appeared at  
22 01.25 and 03.40 hours:

23 Right, okay. You're the first signature on those.  
24 From that do you presume then that you administered?

25 A. Yes.

1

2

1 Q. Lucy Letby confirmed she'd also been involved in the  
2 administration of medication to [Baby D] at 02.39 hours  
3 that morning:

4 Is there anything you can tell us about what  
5 happened to [Baby D]?

6 A. I don't really remember [Baby D].

7 Q. Okay. At half past 1, we're talking about the half past  
8 1 incident, which occurred on 22 June 2015, do you  
9 recall where you were working at that time?

10 A. No.

11 Q. Did you have any observations of [Baby D] at all? Did  
12 you -- did you go into the ward where [Baby D] was, into  
13 the nursery that (sic) [Baby D] was?

14 A. I don't remember.

15 Q. Do you remember that shift at all?

16 A. No.

17 Q. Do you remember who the designated nurse was for  
18 instance?

19 A. No.

20 Q. Or which nursery she was in, no?

21 A. I believe she was in nursery 1, yes.

22 Q. What makes you think that?

23 A. Because I remember drawing up the medications in there  
24 and I think I did draw up some medications in there.

25 Q. Right. Why would you be involved with the care of [Baby D]

1

2

1           if you weren't the designated nurse?

2       A. Because two people are needed to administer drugs.

3       Q. You were involved with the care somewhat but you can't  
4           remember being asked to help or --

5       A. No.

6       Q. -- being approached by another nurse?

7       A. No.

8       Q. Do you remember helping out with a break at all when  
9           a nurse went on a break?

10      A. No, I really can't remember.

11      Q. Okay. In terms of these here that we've just spoken  
12           about, again when you say -- you talked about a flush?

13      A. So a flush is where we give sort of millilitres of  
14           normal saline after giving the medication so that it's  
15           flushed through and not sitting in the end of the line.

16      Q. So is that a needle in like you were describing?

17      A. It's a syringe attached to the end of the IV port, yes.

18      Q. So that's a physical act?

19      A. Yes.

20      Q. Okay. And would that take two of you to do that or is  
21           it just the drawing of the medication?

22      A. It wouldn't take two people to give it, no, unless it  
23           was given steriley, but usually if you draw it up  
24           it would just takes one person to actually give it.

25      Q. So [Baby D] suffered three episodes before she sadly died

1

2

1 and you can't remember any collapse of [Baby D], any  
2 involvement in the care for [Baby D] at that time?

3 A. No.

4 Q. You can't remember being called to help or to -- either  
5 seeing [Baby D] struggling at all or any change of colour  
6 to her? You don't remember at all?

7 A. I don't recall [Baby D], no.

8 Q. No. And that was the same at 3 o'clock: she started  
9 crying, she desaturated again, something you don't  
10 remember?

11 A. No.

12 Q. And this discolouration to the skin, to the trunk, legs  
13 and arms and chin, you don't remember that on any of the  
14 babies on that particular day?

15 A. Not enough to comment on, no.

16 Q. And obviously, sadly, [Baby D] passed away. Do you recall  
17 getting involved with the resuscitation at all of [Baby D]?

18 A. Not that I remember. I think I drew drugs that day --  
19 well, I did draw drugs that day.

20 Q. Okay, and again with the family, do you remember [Baby D]'s  
21 family?

22 A. No.

23 Q. So other than the notes you signed, is there anything  
24 else that you can remember about that particular shift?

25 A. No.

2

1 Q. So taking those notes away, you wouldn't have remembered  
2 [Baby D] at all?

3 A. No, not enough to confidently say what happened, no.

4 Q. Pausing there, that's a reference to the notes that  
5 Ms Letby's been provided with to refresh her memory  
6 during the interview.

7 A. Yes.

8 Q. Thank you:

9 So which one of those procedures there would involve  
10 sort of handling [Baby D]?

11 A. Well, all of them to attach the medication to the port.

12 Q. Okay.

13 A. I don't touch the baby, you just have to connect the end  
14 of the fluid to the cannula or the line that they've got  
15 in place.

16 Q. Right, so you don't have to move the baby?

17 A. I don't physically pick up the baby or move the baby,  
18 no, it's just connecting.

19 Q. Does that cause them to wake up or can they feel that?

20 A. Sometimes they can feel the flush going through, yes.

21 Q. Right, but you don't recall any reaction to that?

22 A. No.

23 Q. Is there anything else that you want to say about [Baby D]  
24 that you can recall or help us out with?

25 A. No.

1

2

1 Q. Okay. So I think we might as well go to a break then.

2 It's quarter past 2 and the interview is at an end.

3 We move to the second interview, please, in respect  
4 of [Baby D], which takes place on 11 June 2019 and is at  
5 [document redacted] in the top right-hand corner.

6 It begins with introductions and caution; is that  
7 right?

8 A. Yes, that's correct.

9 Q. Then:

10 Okay, Lucy, we're going to talk to you now about  
11 [Baby D]. Okay?

12 A. Yes.

13 Q. The officers summarise the previous interview regarding  
14 [Baby D]:

15 You were working in nursery 1 together with  
16 Caroline Oakley on that particular shift and you were  
17 caring for another baby; is that correct?

18 A. I don't remember who I was caring for on that shift.

19 Q. Do you remember calling Caroline Oakley back after [Baby D]  
20 collapsed, Lucy?

21 A. No.

22 Q. Is it possible that you did?

23 A. It's possible. I don't remember [Baby D]. I don't  
24 remember the exact events.

25 Q. Do you now recall being in nursery 1, Lucy, with what

1

2

1           I've just said to you?

2       A. No.

3       Q. In respect of the baby, if a baby is ill would a nurse  
4           go on her break if a baby was ill?

5       A. It would depend how ill the baby was. If they were  
6           acutely unwell, then no. All staff would be needed on  
7           the unit.

8       Q. So in respect of [Baby D], do you think Caroline  
9           would have gone on a break if she thought that [Baby D]  
10           needed care or treatment?

11      A. Not unless that had been handed over to someone to do in  
12           her absence.

13      Q. Is there any reason why you remember the administering  
14           of the medication and not the collapses, Lucy?

15      A. No, I've only remembered the medication from looking  
16           through the notes and seeing that I obviously did sign  
17           for medications.

18      Q. Is it because you remember the administration of  
19           medication because that's when you took the opportunity  
20           to attack [Baby D], Lucy --

21      A. No.

22      Q. -- and administer air?

23      A. No.

24      Q. And the view of the experts concerning air embolus was  
25           put to Lucy Letby and she said...

1

2

1 A. I did not deliberately do anything to [Baby D], no.

2 Q. Is there anything you wish to say about [Baby D]?

3 A. No.

4 Q. We move to the third interview for [Baby D], which is [document  
5 redacted]. It took place on 10 November 2020; is that correct?

6 A. Yes, that's correct.

7 Q. Usual set-up on the frontispiece. The previous  
8 interviews concerning [Baby D] were summarised by the  
9 officers. Lucy Letby confirmed that she still had no  
10 recollection of [Baby D]:

11 As I said to you before, Lucy, [Baby D] was born on  
12 20 June 2015 and died on 22 June, so 2 days later. On  
13 25 June you did a Facebook search for [Father of Baby D]  
14 and on 25 June, again, you then searched for [Mother of  
15 Baby D]. Do you agree that you made those searches on  
16 Facebook, Lucy?

17 A. I don't now recall doing it, but yes, I must have if  
18 they're there, yes.

19 Q. Explain why you made those searches.

20 A. I can't explain. I don't remember doing it.

21 Q. Can you tell me what you were looking for, Lucy?

22 A. No.

23 Q. Were you looking for photographs of the babies, Lucy?

24 A. No.

25 Q. Are you saying that you definitely wouldn't be looking

1 for photographs, you'd be looking for something else  
2 then?

3 A. I don't know what I was looking for, but I wouldn't be  
4 looking for photos of a dead baby on their social media.

5 Q. Perhaps the baby when it was alive?

6 A. No -- I don't know.

7 Q. You don't know what you were looking for?

8 A. No.

9 Q. Okay. Regarding your mobile phone, Lucy, and the  
10 examination of messages that's been completed, at 8.41  
11 on 22 June 2015 you messaged [Nurse A] about  
12 [Baby D]'s death and said:

13 "Messed about a couple of times and came out in this  
14 weird rash. Looking like overwhelming sepsis. Liz came  
15 in, re-screened, et cetera, and reviewing what ABX she  
16 was on, et cetera, in case it was sepsis."

17 Who said it was looking like overwhelming sepsis,  
18 Lucy?

19 A. I don't recall. From that it looks as though they  
20 re-screened her, which is something that we do to  
21 indicate that there is an infection and so we would  
22 change her antibiotics to reflect that.

23 Q. Was it your opinion that it was looking like sepsis for  
24 [Baby D]?

25 A. I don't recall.

1

2

1 Q. At 9 o'clock on 22 June 2015 you said:

2 "I think there is an element of fate involved.

3 There is a reason for everything."

4 Tell me what you meant by that.

5 A. Was it said in relation to [Baby D]?

6 Q. So that is -- obviously you send that first message at  
7 8.41 to [Nurse A] and then 20 minutes later you then said  
8 to her again:

9 "I think there's an element of fate involved,  
10 there's a reason for everything."

11 So following on from that conversation.

12 A. Well, I'm not sure in what respect that was said. You  
13 know, I don't know what I've been asked or what [Nurse A]  
14 has said to initiate that. But the opinion would be  
15 in that, you know, it's fate that the babies get unwell  
16 sometimes, that's -- but I would have to know the  
17 context in which I said it.

18 Q. Okay. So you say there:

19 "There's a reason for everything."

20 What did you mean by that?

21 A. Again I'm not sure specifically without knowing what  
22 I was talking to [Nurse A] about.

23 Q. Well, you're talking to her, obviously, bout [Baby D]'s  
24 death there and you said there:

25 "I think there's an element of fate."

1                   Why would you think that?

2       A. Because sometimes things can't be changed or, you know,  
3                   fully explained sometimes. That is fate, like, why is  
4                   a baby born prematurely or, you know, born with  
5                   something wrong with it. It's not always something  
6                   that's within control, it's fate.

7       Q. Okay. So later the same day at 20.34, so 34 minutes  
8                   past 8 in the evening, you messaged [Nurse A] that  
9                   Yvonne Farmer said Liz Newby was suggesting it may have  
10                  been meningitis. Do you recall if Yvonne said that to  
11                  you directly, Lucy?

12      A. No, I don't recall that at all.

13      Q. Had that ever been suggested before?

14      A. I don't remember.

15      Q. Was it a case then that it was just your suggestion that  
16                  it may have been meningitis for [Baby D]?

17      A. I don't remember, so I can't comment.

18      Q. Okay. At 21.59 hours on 30 June you messaged [Nurse A]  
19                  and said that [Baby D] was septic and she asked if it was  
20                  definitely septic and did the PM confirm it. You  
21                  replied that the full PM wasn't back yet. Do you recall  
22                  where you got the information from that [Baby D] was  
23                  septic?

24      A. No. Having looked at that, I wonder if it was after  
25                  some sort of debrief, but I -- I don't know for

1

2

1           definite, no.

2       Q.    Okay.  And how would you have known if the full report  
3           wasn't back yet?

4       A.    Well, if I'd been told that by someone medical.  We  
5           don't have access to records.

6       Q.    Okay.  On 26 June, again, the same year, 2015, you have  
7           a message conversation with Minna, so a colleague.  Do  
8           you recall Minna?

9       A.    Yes, yes.

10      Q.    Who suggested that you should have counselling, but you  
11           said that you couldn't do it, you said that you couldn't  
12           talk about it and you can't stop crying.  Why could you  
13           not do the counselling, Lucy?

14      A.    I don't recall the conversation.

15      Q.    Have you got anything else you wish to add in relation  
16           to those messages or anything else in relation to [Baby D]?

17      A.    No.

18      Q.    The officer asks the other:

19                   Do you have anything you want to say?  Do you  
20           remember at the time, around 26 June 2015, after [Baby D]'s  
21           death, were you particularly upset and disturbed by what  
22           had happened?

23      A.    I honestly can't remember.

24      Q.    That concluded the interview concerning [Baby D].

25      A.    Yes.

1 Q. We move on to [Baby E]. We see, hopefully in the top  
2 right-hand corner, [redacted]. We can see, as far as [Baby  
3 E] was concerned, that the first interview took place on  
4 July 2018.

5 A. Yes. That's correct.

6 Q. The interview began, as we can see from the summary,  
7 with introductions and caution?

8 A. Yes.

9 Q. So we're going to continue [says the officer], the same  
10 format as previously, Lucy, and we're going to go on to  
11 [Baby E].

12 A. Okay.

13 Q. Okay. At 17.53 hours on 29 July 2015, [Baby E] was  
14 born to [Parents of Babies E & F]. At 23.40 hours on  
15 3 August 2015, he suddenly deteriorated and at  
16 01.40 hours on 4 August 2015 [Baby E] was pronounced  
17 deceased. I believe you've had the chance to go through  
18 the notes.

19 A. Yes.

20 Q. Other than those notes, do you remember your involvement  
21 with the care of [Baby E]?

22 A. Yes.

23 Q. Okay. Do you want to just tell us then in your own  
24 words what you do remember, please?

25 A. So I remember the care of [Baby E], from memory.

2

1 I believe he'd been started on insulin earlier in the  
2 day. He was on an insulin infusion, but otherwise doing  
3 well and was starting to have enteral feeds. I remember  
4 after some of his feeds for me I was getting large  
5 aspirates back from his NG tube and when I consulted the  
6 doctor we omitted, I think, a feed and then his abdomen  
7 became distended and he was reviewed by the doctors and  
8 some medications were started and his abdomen continued  
9 to distend and become discoloured and ended up needing  
10 respiratory support and began bleeding and then he  
11 needed resuscitation.

12 Q. Is there anything else from your memory?

13 A. And I remember caring for [Baby E] once he had passed  
14 away.

15 Q. Okay. So in terms of care given, when was the care  
16 given to [Baby E] by you?

17 A. So I took over on a night shift and so it would have  
18 been from around 8 o'clock in the evening.

19 Q. Is that the 3rd into the 4th? So he died at 01.40 on  
20 the 4th, the morning of the 4th?

21 A. So this was the 3rd, yeah.

22 Q. The 3rd into the 4th?

23 A. Yes.

24 Q. Sorry, go on. In terms of sort of handover what did you  
25 understand to be his clinical position?

1

2

1       A. From memory that he was stable and there was nothing  
2                   sort of untoward other than the fact he was on insulin.

3       Q. Okay. In terms of caregiving, did anybody else have  
4                   care for [Baby E] overnight on that shift?

5       A. Not that I recall, no.

6       Q. Okay.

7       A. It was just myself.

8       Q. In respect of the care, Lucy, where was [Baby E]?

9       A. He was in nursery 1.

10      Q. Okay. Do you recall any other babies in nursery 1 at  
11                   that time on that shift?

12      A. Yes, I think his brother was in there as well, [Baby F].

13      Q. Were there any other members of staff there?

14      A. When? At any point?

15      Q. On that shift on the night you were caring for [Baby E].

16      A. I know another nurse was there, I don't know at what  
17                   point she was in the room, Belinda Simcock.

18      Q. Okay. Was she caring for [Baby E]'s brother?

19      A. I don't remember.

20      Q. So at what point do you remember Belinda being in there  
21                   then?

22      A. I think it was Belinda that was there when he -- when  
23                   I asked for the help because he had blood back from his  
24                   NG tube. I think it was Belinda that I showed it to.

25      Q. Is that something you think or that you remember?

1

2

1 A. I think.

2 Q. Right. You've obviously mentioned her name and you  
3 obviously think that's the time. What makes you think  
4 it was her at the relevant time when the blood was  
5 there?

6 A. Because I remember showing the blood to somebody and  
7 I think it was Belinda.

8 Q. Okay and what did Belinda say to that?

9 A. That we discard that and not feed him and then get the  
10 doctors to review him.

11 Q. Okay. So you were his designated nurse, just to make  
12 that clear?

13 A. Yes.

14 Q. Okay. So you then went on to say that he was doing  
15 well, having feeds, and you said something feeds and  
16 I didn't quite catch it. The name of the type of feeds?

17 A. I think he was starting feeds, I think so.

18 Q. Okay. And how was he during the feeds on that evening?

19 A. I think from memory he had one feed that I gave him that  
20 was okay and then on the next feed I was getting a large  
21 aspirate back from his NG tube.

22 Q. Okay. What about the sort of interventions, did he have  
23 the up-the-nose tubes?

24 A. No.

25 Q. Lucy Letby explained that [Baby E] was attached to

1

2

1       a Philips monitor, he had a nasogastric tube in place  
2       and was self-ventilating in air:

3           Okay, so who puts the tube down?

4       A. Nursing staff.

5       Q. Did you do that with [Baby E]?

6       A. Not that I recall, no.

7       Q. The feeding charts might show us that, mightn't they?

8       A. Yes, I don't remember putting the tube in on [Baby E], so  
9           I think he would have had it already in.

10      Q. So in terms of him doing well, what do you consider as  
11           doing well?

12      A. That his observations were stable, that he was handling  
13           appropriately. I think from memory that his blood sugar  
14           levels were stable.

15      Q. Any concerns at all for [Baby E] at this point?

16      A. No, not prior to that large aspirate, no.

17      Q. What about his colour?

18      A. I don't recall there being a problem with his colour at  
19           that point.

20      Q. Okay. Anything before the aspirate? So you then said  
21           there was a large aspirate.

22      A. I think it was a bile aspirate.

23      Q. I don't know what that is.

24      A. Bile is a product that's produced by the liver that we  
25           get from the bowel.

1

2

1 Q. Okay.

2 A. And usually it's a sign they're not digesting their  
3 feeds or there's potentially an infection. Bile isn't  
4 something we want to be getting back from the stomach.

5 Q. What is that suggesting to you then, Lucy?

6 A. Then there's some sort of abdominal issue.

7 Q. Is it something you would escalate to a doctor, for  
8 example?

9 A. So usually from my perspective as a band 5, you would  
10 ask a senior member of nursing staff, so a band 6 or the  
11 nurse in charge, and they would advise.

12 Q. Right. Is that what she is?

13 A. Yes.

14 Q. And what was the advice?

15 A. To discard that and omit the feed --

16 Q. Okay.

17 A. -- I think from memory.

18 Q. Okay. Are there any circumstances where you would need  
19 to keep the aspirate, the bile-type substances?

20 A. You could keep it to show the doctors, and that's what  
21 we usually do.

22 Q. Right.

23 A. So we discard it from the baby in that we don't return  
24 it.

25 Q. Oh.

2

1 A. But we usually keep the syringe to show a member of  
2 staff.

3 Q. Did you do that in this case?

4 A. I don't remember.

5 Q. You then said that his abdomen was distended. How --  
6 what kind of time difference is there here?

7 A. I'm not sure from memory but I think maybe an hour,  
8 something like that. I don't think it was long.

9 Q. Okay. Had you gone away from [Baby E] and come back  
10 in the hour or were you caring for him throughout that  
11 period?

12 A. I don't recall if I had another baby that I was caring  
13 for at that point, but I don't remember being with  
14 [Baby E] the whole time. Usually for a baby that's  
15 self-ventilating, we wouldn't need to be --

16 Q. Okay.

17 A. -- at the cot side the whole time.

18 Q. Okay. So in terms of the -- his abdomen being  
19 distended, can you describe that further for me?

20 A. So I noticed that his abdomen became fuller and rounder  
21 and then later on in the evening there was  
22 a discolouration area to part of his abdomen, like  
23 a purple discolouration.

24 Q. Okay. So this initial distended abdomen, what does  
25 that -- what do you -- what does that trigger within

1

2

1           a neonatal nurse?

2       A. So you'd be wanting to know why the abdomen's become  
3           distended, so usually we would get the senior nurse  
4           to -- or the medical team to come and review.

5       Q. Okay. So what did you do in this case?

6       A. I believe I got the doctors to come and review him.

7       Q. Okay. Do you know who that was?

8       A. I think it was Dave Harkness.

9       Q. So this distended abdomen was about an hour after the  
10           aspirate. And when did you request --

11      A. You'd have to check. I -- I can't remember specific  
12           times because I know I got blood back from his NG tube  
13           at some point as well.

14      Q. Is that before or after Dr Harkness attended and  
15           reviewed him?

16      A. I'm not sure from memory.

17      Q. Okay. And you said that he was then reviewed. What was  
18           the outcome of the review?

19      A. So we started some -- I think he was reviewed twice but  
20           after we started some medications on [Baby E] because I  
21           believe he had antibiotics specifically for the abdomen  
22           and also a drug called ranitidine --

23      Q. Okay.

24      A. -- that can help with bleeding.

25      Q. And was there any other issues causing any concerns with

1

2

1 [Baby E]?

2 A. Not that I recall from memory at that time, no.

3 Q. Sorry, you then went on to say that -- about the  
4 discoloured area. You've touched on that a little bit.

5 Tell me a little more about the discolouration?

6 A. I noticed that there was becoming a discolouration to  
7 his abdomen, but I can't say exactly where but there was  
8 becoming a patch of sort of purpleness on his abdomen.

9 Q. And what did that indicate to you? What -- did that  
10 cause you concern with regards to [Baby E]?

11 A. It caused concern, yes.

12 Q. Why? Why is that a concern?

13 A. Because that's not something that is normal for a baby  
14 to have.

15 Q. So in terms of how big the patch was and its location  
16 and you know how long it was there for, what can you  
17 tell me about that?

18 A. I think from memory it was towards the right-hand side,  
19 by his umbilicus, but I can't remember the extent or the  
20 size at the moment. We don't see many babies that have  
21 abdominal problems and things like that.

22 Q. What, the distension or the discolouration?

23 A. The discolouration.

24 Q. Okay. What was that a sign of to you?

25 A. There's an ongoing abdomen problem.

2

1 Q. Okay. Did anyone else witness that discolouration?

2 A. I believe he was reviewed again by the doctors, yes.

3 Q. How long after the distension did the discolouration

4 appear?

5 A. Again, I can't be specific on times.

6 Q. Okay. If you just talk generally, whether it was a few

7 minutes or a few hours, can you clarify more than that?

8 A. I would say minutes rather than hours.

9 Q. Okay. Were you still with [Baby E] throughout these  
10 changes?

11 A. I don't recall if I was there consistently or if I'd  
12 left at any point. I don't recall. I think he -- from  
13 memory he deteriorated and was desaturating and having  
14 apnoeas and needed some support with the Neopuff.

15 Q. Okay. How long after that, how long after the  
16 discolouration was that requirement?

17 A. Again, I'm not sure.

18 Q. Can you say minutes as opposed to hours?

19 A. I would say minutes, yes.

20 Q. Okay. So what action did you take at that point?

21 A. I think we got the doctors to review him again.

22 Q. Okay, think or you know?

23 A. Think.

24 Q. You think. So when you say we, who's we?

25 A. I think Belinda Simcock was with me.

1

2

1 Q. Was anyone with you at the point of you realising that  
2 he required respiratory support?

3 A. Not that I recall, no.

4 Q. Okay. How were you alerted to it?

5 A. I don't remember.

6 Q. Lucy Letby, in summary, could not remember how she  
7 became aware that [Baby E] required respiratory support.  
8 She confirmed that he was connected to a monitor at the  
9 time:

10           Okay, but you don't recall whether the monitor  
11 alerted you to the --

12 A. No.

13 Q. -- to the desaturation? Okay. So at that point you  
14 think that you obviously responded but Belinda was there  
15 and you that you did -- sorry, did you say you alerted  
16 the doctors?

17 A. I think so, yes.

18 Q. And who responded to that?

19 A. Dave Harkness.

20 Q. Do you know where he was when he was requested?

21 A. I'm not sure where but he wasn't on the unit.

22 Q. He was or he wasn't on the unit?

23 A. Wasn't.

24 Q. Okay. What's the process that you go through to alert  
25 him?

1

2

1 A. I'm not sure because I'm not sure if I was the one who  
2 called him or if it was somebody else.

3 Q. Right, and how long after you realised that this  
4 deterioration was going on did he arrive?

5 A. I can't be specific. I don't know.

6 Q. Okay. Then you stated there was bleeding. Tell me  
7 about that.

8 A. So I was getting blood back from the NG tube and from  
9 memory I'm not sure at what point that came, that  
10 I first noticed that there was some blood coming from  
11 the NG tube.

12 Q. Okay. In how long after you recognising his  
13 deterioration did you see the bleeding?

14 A. I'm not sure if the bleeding came before that or after.

15 Q. While we're talking about bleeding then, can you  
16 describe the, you know what, what colour, what the  
17 colour of that was? I know it's a strange question to  
18 ask, but --

19 A. It was fresh blood.

20 Q. Okay. What was that suggesting to you then?

21 A. That it's a fresh bleed, it's an active bleed, it's not  
22 old blood, it's new blood.

23 Q. So what could be going on with [Baby E] for this to  
24 happen?

25 A. That he's bleeding in his abdomen.

1

2

1 Q. Okay.

2 Lucy Letby was then asked some questions about her  
3 notes, notes that she had in front of her presumably.

4 A. Yes.

5 Q. In quotes, and it's at tile 126 if anyone wants to refer  
6 to it:7 "At 22.00 a large vomit of fresh blood, 14ml of  
8 fresh blood. Aspirate obtained with NG tube.

9 Reg Harkness attended."

10 Yes?

11 A. Okay.

12 Q. Was that the first time that you'd seen blood?

13 A. I think so, yes. I'd have to check the actual feeding  
14 chart because that's where I would document the  
15 aspirates.16 Q. The officers then read the relevant note in full or that  
17 nursing note in full:18 Okay, had you seen any blood on [Baby E] prior to that  
19 large vomit of fresh blood?

20 A. No, not from my notes and my charts, no.

21 Q. But if -- if you had would you have put it in the notes?

22 A. Yes.

23 Q. Okay. When you saw that blood, was anyone there at that  
24 time with you?

25 A. I think I showed it to Belinda. I'm not sure if she was

1

2

1                   there when I actually obtained it.

2       Q. Lucy Letby couldn't remember whether Belinda Simcock was  
3                   in the room with her when she first saw blood:

4                   What about any of the family?

5       A. I don't recall. I -- I know mum visited at some point  
6                   but I'm not sure at which point the mum was there.

7                   I know she was sat with him for a period of time.

8       Q. Okay. I presume that if she have been there she would  
9                   have seen the blood herself then, would she?

10      A. Yes.

11      Q. Okay. Do you remember whether or not the family saw  
12                   blood?

13      A. I don't remember that, no.

14      Q. Do you remember any conversation that you had with the  
15                   family regarding the blood at all?

16      A. Not from memory, no. I'd have to check my notes.

17      Q. What about updating the family regarding the blood?

18      A. I believe mum was updated, yes.

19      Q. Who updated the family?

20      A. I think myself and Reg Harkness.

21      Q. Do you remember when that happened then?

22      A. I think it was after he'd been reviewed and we had  
23                   started the medications.

24      Q. Okay. So Reg Harkness attended. What was his view of  
25                   the blood? What was his feeling that was going on?

2

1 A. I think he wanted us to start with the metronidazole and  
2 ranitidine, which is used to treat bowel conditions.

3 Q. Did he have a view of what the condition was for [Baby E]?

4 A. I think there was mention of it being necrotising  
5 enterocolitis and I think he ordered an abdominal X-ray  
6 as well.

7 Q. Was there any issues with the NG tube at all? Was it  
8 correctly fitted?

9 A. I don't recall there being any issues with it.

10 Q. In the correct position, was it?

11 A. Without an X-ray the only way I would know is checking  
12 that -- when we document here the length that it's been  
13 inserted, that's what you would check --

14 Q. Okay.

15 A. -- prior to aspirate and if the aspirate is an acidic  
16 aspirate then it indicates that it's in the stomach.

17 Q. So in relation to 14ml of fresh blood, which you put,  
18 is that a large quantity?

19 A. Yes.

20 Q. Okay. But that was the first quantity that you measured  
21 with your treatment of [Baby E] that evening?

22 A. Of blood. I'd had the bile aspirate prior to that.

23 Q. Yes, but that was not blood?

24 A. No.

25 Q. You describe that bile aspirate as "mucky"; what did you

1

2

1 mean by that?

2 A. It's mucky, it's sort of dark, it's not pure bile -- so  
3 bile is bright green where mucky is sort of a bit  
4 darker.

5 Q. And that was prior to the 9 o'clock feed that you put in  
6 your notes, prior to the 21.00 feed, yeah?

7 A. Yes, and that's the feed that I omitted.

8 Q. Then, in summary, Lucy Letby was able to confirm that  
9 she had not fitted [Baby E]'s feeding tube, he had been  
10 due a feed at 21.00 hours, but she had found the mucky  
11 aspirate before that and it had been omitted as  
12 a result. She took her times from the clock on the  
13 nursery wall:

14                   Would there be any -- at any time if you'd found  
15                   blood on [Baby E] that you wouldn't have told a doctor?

16 A. No.

17 Q. No, I take it you know the sign of fresh blood being  
18 vomited -- was that a sign there was something serious  
19 going on?

20 A. Yes, I have not seen a baby vomit like that. I have not  
21 seen a baby have blood coming back like that before.

22 Q. Okay. Would that be something that you would tell the  
23 family or is it something that you, you know, you've  
24 dismissed, were you overly concerned at that point?

25 A. I was concerned in that it was something that I hadn't

2

1           seen before, but I don't recall the registrar being  
2           overly concerned.

3   Q. Right, okay. So it's not something that you would  
4           concern the parents with necessarily?

5   A. I think it's something we would tell the parents,  
6           probably. I'm not sure without looking at my notes,  
7           notes in terms of them, what they were told.

8   Q. Okay. If you had told the parents about that would that  
9           have been in your notes, would you have put that in your  
10           notes?

11   A. Yes, yes.

12   Q. You then go on to say:

13            "The abdomen was soft and non-distended, the SHO  
14           informed, and to omit feed."

15           Who checked the abdomen?

16   A. Myself.

17   Q. Right. So you were happy at that point and you were not  
18           overly concerned?

19   A. No, so I'm happy the abdomen was soft and non-distended  
20           and then got the SHO to review him.

21   Q. Okay. And this would have been after 9 o'clock,  
22           am I right in saying that?

23   A. Yes.

24   Q. Okay. And the SHO, who was the SHO?

25   A. I don't remember.

1

2

1 Q. Right. Did they actually attend or did they just give  
2 you advice regarding that? You've obviously got "SHO  
3 informed, to omit feed".

4 A. I don't remember. I don't remember if they physically  
5 came or whether that was a telephone conversation.

6 Q. Right, but that doesn't remind you at all of who  
7 actually saw him or reviewed him over the phone?

8 A. No.

9 Q. Okay. So after whoever it was that came, if they did  
10 come, and prescribed this to help [Baby E]'s tummy settle  
11 because of the mucky --

12 A. Yes.

13 Q. Is that right?

14 A. Yes.

15 Q. And then you've then co-signed it. Did you administer  
16 that as his designated nurse?

17 A. I don't recall.

18 Q. So was [Baby E] showing any sort of signs or symptoms  
19 after the bile that was aspirated?

20 A. Not that I remember, no.

21 Q. No, so there was no real change in his handling or  
22 anything?

23 A. No.

24 Q. And Lucy Letby was then asked about the distinction  
25 between the vomit and the aspirate.

2

1 A. So a large vomit is -- is a large amount that's come out  
2 of the mouth.

3 Q. In addition to the 14ml of fresh blood aspirate?

4 A. Yes.

5 Q. Did he vomit prior to the aspirate?

6 A. I'm not sure.

7 Q. If -- you know, how you've written it here, one and then  
8 the other?

9 A. Oh sorry, yes, he's vomited, and then I've got blood  
10 back from his tube.

11 Q. Okay. But are we clear that it didn't occur before  
12 10 o'clock though? You've got at 22.00 hours "large  
13 vomit". There is no blood loss --

14 A. No.

15 Q. -- prior to that?

16 A. No.

17 Q. That was the first time?

18 A. Yes.

19 Q. Then the officer returned to the notes:

20 Okay, and then a further 13ml of blood obtained by  
21 11, 23.00 hours. Where was this obtained from?

22 A. The NG tube.

23 Q. So at this point there's a total of 27ml of fresh blood  
24 in the period of an hour, is that right, together with  
25 the vomit of blood? Right, okay. So what was going

1

2

1           through your mind at that time when another 13ml of  
2           blood were taken?

3           A. I was quite concerned.

4           Q. Lucy Letby could not remember how soon after this  
5           further quantity of blood that [Baby E] deteriorated  
6           again. She thought Dr Harkness was there at the time.

7           She was asked:

8                   Around this time just prior to obviously his  
9           desaturation, what were your activities?

10          A. What, for [Baby E]?

11          Q. Generally.

12          A. I don't remember.

13          Q. Okay, because of the previous blood were you around  
14           [Baby E] all the time?

15          A. I don't remember.

16          Q. Okay. You then go on to say:

17                   "Oxygen given by a Neopuff, toes becoming white and  
18           [Baby E] cool to touch."

19                   Like you say, Reg Harkness is present throughout.

20                   And then continues with the note.

21                   "[Baby E] began to decline. At 23.40 hours he became  
22           bradycardic. A purple band of discolouration over the  
23           abdomen. Perfusion poor and a CRT in 3 seconds."

24                   This purple band, can you describe that to us?

25          A. As I said before, I don't remember it specifically, but

2

1           I think it was a purplish area around his umbilical  
2           area.

3   Q.    Okay.  Was that the same one that you'd previously  
4           described?

5   A.    Yes.

6   Q.    Okay.  Because you obviously describe it as a band.  
7           Why?  What do you mean by a band?

8   A.    A band -- it was in sort of a line.

9   Q.    Horizontal or vertical?

10   A.   I would read "band" as horizontal, from memory.

11   Q.   And do you remember the width of that at all?

12   A.   No.

13   Q.   And had you seen anything like that before?

14   A.   No, I don't think so.

15   Q.   The officers read the notes of [Baby E]'s unsuccessful  
16           resuscitation and she was asked:

17           Do you remember what your role was in the  
18           resuscitation?

19   A.   I think I carried out chest compressions at one point  
20           because I remember I was pressing down more, more blood  
21           came out of his mouth.

22   Q.   So how were you feeling, Lucy, at that time?

23   A.   It wasn't nice to see.

24   Q.   Do you remember what time the mother was present?

25   A.   Only from what I've written there, that was present at

1

2

1           the start of the shift and then visiting again at  
2           10 o'clock.

3   Q. Okay. Do you remember when she left then?

4   A. After the 10 o'clock visit when --

5   Q. This is the note:

6            "UMMY was present at start of shift attending to  
7            cares. Visited again approximately 10 o'clock. So  
8            she's obviously there."

9            What time would you have come on shift in the  
10          morning -- sorry, in the evening?

11       A. 8 o'clock.

12       Q. 8 o'clock. Do you remember what time she left before  
13          she returned?

14       A. No.

15       Q. No, okay. Well, she did leave and she came back, you've  
16          put at 10 o'clock.

17       A. Yes.

18       Q. Did anything happen to [Baby E] before she returned at  
19          10 o'clock? I think in your notes that you got --

20       A. When I look back --

21       Q. Yeah, you've got this.

22       A. He had the mucky aspirate at 9 o'clock.

23       Q. Yeah, but no bleed at all before she returned at  
24          10 o'clock?

25       A. I think -- well, there was at 10 o'clock, so --

2

1 Q. Okay, not before 10 o'clock. We've got she returned at  
2 22.00 hours and I think it was 22.00 hours when we had  
3 the large vomit. A large vomit of fresh blood, yeah.  
4 So prior to mum coming at 10 o'clock --

5 A. No.

6 Q. No. Do you remember how that conversation with mum went  
7 regarding that bleed?

8 A. I remember her being concerned.

9 Q. Okay. Do you remember what she said to you?

10 A. Just that she would like us to contact her if there was  
11 any further decline or any update for her. She was  
12 resting upstairs at the time.

13 Q. Okay. Did she see the vomit as well because obviously  
14 the first one is at 22.00, "large vomit of fresh blood",  
15 and obviously aspirate obtained from the NG tube.

16 A. I would assume that she was there then.

17 Q. During the vomit and the aspirate because it just -- on  
18 this communication, excuse me, it just says that she was  
19 aware that we'd obtained blood from his NG tube, not  
20 with reference to the vomit?

21 A. No, so I'm not sure when he vomited then. I don't think  
22 he vomited prior her coming.

23 Q. So you think he vomited after her coming?

24 A. Because I think I probably would have written --  
25 explained that we'd had a vomit and blood from his NG

1

2

1                   tube if he'd vomited.

2       Q. Okay, so what does that make you think about the first  
3                   lot of notes then where it's at 22, large vomit of fresh  
4                   blood, and then the 14ml fresh blood aspirate obtained,  
5                   and that's on the first page, though, you know at 22.00?

6       A. That he's had a large vomit at 22.00.

7       Q. Yes, but obviously you're saying that she, mum, returned  
8                   at 22.00.

9       A. I've said approximately, so I don't --

10      Q. Right.

11      A. I've written approximately 22.00.

12      Q. Okay.

13      A. So I'm not sure.

14      Q. But obviously this must be post-vomit because that's  
15                   when you got the blood from the NG tube because that's  
16                   what you told her?

17      A. Yes.

18      Q. I'm right in saying this -- and then I'm a bit confused,  
19                   yeah.

20                   Then there's some talking between the officers:

21                   I suppose the question is: how did she become aware?  
22                   Is it something that you've told her or something she's  
23                   witnessed?

24      A. About the blood from his NG tube?

25      Q. Mm-hm.

2

1 A. I would read from this that I've told her because I've  
2 told her that we're starting medications to treat it.

3 Q. Okay, okay.

4 A. So she visually saw it.

5 Q. So he must -- he must have vomited before then, mustn't  
6 he?

7 A. I would assume so, yes.

8 Q. So would there be any reason why you wouldn't tell mum  
9 over the vomit of blood?

10 A. No, not that I remember.

11 Q. What's the conversation that you had with her, can you  
12 recall?

13 A. I'm not sure if it was myself that told her or somebody  
14 else and I'm writing that she's been told because I was  
15 there when somebody else told her. I'm not sure.

16 Q. Right, okay.

17 A. And then just reading this, I've put that mum was  
18 updated by Reg Harkness.

19 Q. Yeah, okay.

20 A. So I -- I think it was a joint discussion between myself  
21 and Reg Harkness to update mum.

22 Q. How were you feeling after [Baby E]'s death?

23 A. It was upsetting, [Baby E]'s.

24 Q. Whose decision was it for you to bathe [Baby E]?

25 A. The parents asked me to.

2

1 Q. Did you create a memory box for [Baby E] at all?

2 A. Yes.

3 Q. On the instigation of who?

4 A. What do you mean, who told me to?

5 Q. Yeah, yeah. Did you -- was that something you --

6 A. It's just something that we do for babies. I don't  
7 think anybody told me to do it.

8 Q. Right. So is it something you would always do? Is it  
9 something the family would say, yeah, can you do that  
10 for me?

11 A. No, we'd do it.

12 Q. Okay. As a matter of course?

13 A. Yes.

14 Q. And again, did you stay in touch with the family at all  
15 following [Baby E]'s death?

16 A. Only for the time that [Baby F] remained on the unit.  
17 Not afterwards, no.

18 Q. Okay. And obviously another stressful day for you. How  
19 did you deal with it personally?

20 A. I don't recall specifically. I know I found it very  
21 helpful to -- to have bathed him and had some time with  
22 him and dressing him. I found that quite a privilege  
23 that mum and dad wanted me to do that for them.

24 Q. Do you have any opinion as an experienced neonatal nurse  
25 as to what happened to [Baby E]?

2

1 A. No, I'm not medically trained and I don't know exactly  
2 what happened to him, but I feel there was obviously  
3 some sort of bleed from his abdomen.

4 Q. Right, okay.

5 A. And obviously I did feel that the registrar wasn't  
6 overly concerned and, I don't know, I was a little bit  
7 concerned but I felt reassured that he wasn't.

8 Q. Okay. And following deterioration, did you raise  
9 that -- your concerns with anybody?

10 A. I think I discussed it with Belinda.

11 Q. Oh right. And what was the outcome of that?

12 A. I'm not sure.

13 Q. Okay. And what were the concerns that you expressed at  
14 that time to Belinda?

15 A. I think I spoke to her about that, that I'd not seen  
16 a baby bleed in that way before, and her being more  
17 experienced, had she seen it and what would potentially  
18 cause that, and was it something that maybe the  
19 registrar could have acted on differently or something  
20 that we could have done differently.

21 Q. Right. And do you know what her answer was?

22 A. No, I don't remember.

23 MR ASTBURY: Right. We'll take a bit of a break, shall we,  
24 just 5 minutes? It's 6 minutes past 8.

25 MR JUSTICE GOSS: Right. That's a convenient point for us

1

2

1 to have a break. Just slightly over the hour. It's  
2 just after 1 o'clock now, according to that clock. Can  
3 I say 2.05, please, to continue? Thank you very much.

4 (In the absence of the jury)

5 MR JUSTICE GOSS: I gather everyone's got the updated list  
6 and I'm told the jury have got it as well. I'll mention  
7 it at the end of today as well, the non-sitting days.  
8 Thank you very much.

9 (1.03 pm)

10 (The short adjournment)

11 (2.05 pm)

12 MR JUSTICE GOSS: Yes.

13 MR ASTBURY: Officer, we had reached the second interview  
14 for [Baby E], which begins at [redacted] on our pagination.  
15 It's an interview which took place on 11 June 2019.  
16 Again we have the full interview times set out, but  
17 dealing solely with [Baby E], could we pick up, please,  
18 with the introductions and caution.

19 The officers recapped on the previous interview  
20 concerning [Baby E]. Followed with this question:

21 In your notes you stated that:

22 "Prior to the 9 o'clock feed, 60ml of mucky slightly  
23 bile-stained aspirate was obtained and discarded,  
24 abdomen soft and non-distended. SHO informed to omit  
25 feed."

1

2

1                   Do you recall, Lucy, which SHO you informed?

2     A. No, I don't.

3     Q. Okay. Tell me what was discussed during that  
4                   conversation.

5     A. I can't remember whether it was a face-to-face  
6                   conversation or a telephone conversation.

7     Q. Okay.

8     A. I don't recall it specifically, I can't remember who it  
9                   was with.

10    Q. Okay. Do you recall the content of that conversation?

11    A. No, because I can't remember who it was with.

12    Q. Dr Chris Wood was the duty SHO on this day from 8.30  
13                   in the evening. He does not recall speaking to yourself  
14                   as indicated in your notes. Do you recall if it was  
15                   Chris Wood, Lucy?

16    A. I don't recall who it was, no.

17    Q. If he was the duty SHO on from half 8 in the evening is  
18                   it likely it would have been him who you spoke to?

19    A. Yeah, him or his registrar, yeah.

20    Q. Mm-hm. And doesn't have any contact until this is via  
21                   the crash call system --

22    A. Right.

23    Q. -- and says he arrives at around 00.37 hours.

24    A. Reg Harkness that reviewed the baby?

25    Q. Say again, sorry?

2

1 A. Reg Harkness reviewed the baby at some point.

2 Q. Okay, but in your notes it says "SHO informed".

3 A. Right.

4 Q. That's what I'm --

5 A. Okay, I don't recall specifically speaking to an SHO so  
6 I can't confirm that it was him or not him.

7 Q. He would have been the only one, there's only one SHO on  
8 duty.

9 A. Yeah.

10 Q. If it was the registrar that you informed, Lucy, would  
11 you have written registrar in your notes and not SHO?

12 A. Yes, unless I have just done it as an oversight.

13 Q. Because obviously using the word "informed" would  
14 suggest that you wrote this after you had spoken to  
15 them?

16 A. Yes.

17 Q. Do you agree with that?

18 A. Yes.

19 Q. Okay. A statement's been obtained, Lucy, from  
20 [Mother of Babies E & F], the mother of [Baby E]. She's  
21 given us an account of this night, 3 August 2015 going into  
22 the 4th. She says:

23 "I expressed some milk and took it to the neonatal  
24 ward at around 9 pm."

25 Tell me what you remember about [Mother of Babies

1

2

1           E & F] arriving on the ward at around 9 o'clock, Lucy.

2       A. I can't remember. I'd have to look at what I've  
3           documented.

4       Q. So Lucy Letby was provided with her note and asked:

5           Okay, so do you recall her arriving on the ward at  
6           9 o'clock?

7       A. No, not that specific time, no.

8       Q. Okay. Do you recall [Mother of Babies E & F] --

9       A. Yes.

10      Q. -- the mother of [Baby E]? Do you recall if she was  
11           expressing milk?

12      A. I don't remember.

13      Q. Is it common for mothers to express milk and bring --

14      A. Yes.

15      Q. She goes on to say:

16           "When I arrived [Baby E] was crying and really upset.

17           He had blood coming out of his mouth."

18           Do you recall that, Lucy?

19      A. No.

20      Q. Tell me about the blood around [Baby E]'s mouth at this  
21           time.

22      A. I can't remember specifically what time I saw the blood  
23           or didn't see blood. I don't remember it.

24      Q. Okay, so from your notes in your previous interview you  
25           commented that [Baby E] had a large vomit of fresh blood

1

2

1                   at 10 o'clock on 3 August. I'll give you a copy. If  
2                   you just have a look at your notes there, Lucy.

3           A. Yes.

4           Q. Can you see there the 10 o'clock that you discussed in  
5                   your first interview?

6           A. That the mum is visiting again at 10 o'clock?

7           Q. Yes.

8           A. Yeah.

9           Q. Yes, can you see where you've documented that in your  
10                  notes?

11           A. Yes, yeah.

12           Q. Do you recall [Mother of Babies E & F] visiting now you  
13                  have had a chance to look at your notes?

14           A. Yes, I remember she came down.

15           Q. Okay, so --

16           A. I don't remember details of the visit.

17           Q. But when you say she came down, where did she come from,  
18                  Lucy?

19           A. Post-natal ward.

20           Q. Tell me what you remember of her coming to the neonatal  
21                  ward then?

22           A. I know she came down. I think she sat with [Baby E] for  
23                  a bit and I think at some point she was updated by  
24                  a registrar, maybe about [Baby E], I don't remember.

25           Q. Okay. Just confirm the time that you put down there,

2

1           Lucy, for us, that that's happened?

2       A. 22.00 hours.

3       Q. Okay. Do you recall, Lucy, when [Mother of Babies E & F]  
4           attended the ward that [Baby E] had blood on him?

5       A. No, I don't remember.

6       Q. Do you have any recollection of [Mother of Babies E & F] arriving  
7           and seeing [Baby E], her son, crying and being really upset?

8       A. I can't remember what [Baby E] was like when she visited.

9       Q. Do you recall any conversations with [Mother of Babies E & F]  
10           about the blood around [Baby E]'s mouth, Lucy?

11      A. Not from my memory now, no.

12      Q. Okay. She goes on to say:

13            "I tried to use the containment technique but it did  
14           not work. I was really alarmed and instinctively knew  
15           there was a problem. Lucy, the nurse on duty, told me  
16           not to worry."

17           Do you recall that?

18      A. No.

19      Q. She said that you said to her it would just be his feed,  
20           his feeding tube, irritating his throat, and the  
21           registrar would be along to see him soon. Do you agree  
22           you said that to her, Lucy?

23      A. I don't remember saying that, no.

24      Q. She says you told her to go back upstairs. Do you  
25           recall that?

1

A. No.

2

Q. She says there that you told her it would just be his feeding tube irritating his throat. Explain to me what made you believe it was his feeding tube?

3

A. I don't know, I don't know why I would say it was the feeding tube irritating his throat. That's not a normal reason for a baby to have blood in its mouth. I don't know why I would have said that.

4

Q. Okay. Had you contacted the registrar at this point, Lucy?

5

A. I don't remember.

6

Q. Is it in your notes, Lucy?

7

A. I've documented she was updated by Reg Harkness and contained [Baby E] so I'm assuming that's around the time at 10 o'clock when she visited. She was referring to offering containment holding.

8

Q. You're clear with the time there, Lucy, aren't you?

9

A. I've documented 22.00 hours, 10 o'clock, yeah.

Q. Is there anything there in your notes about [Baby E]'s feeding tube irritating him?

10

A. No.

11

Q. Is there anything there, Lucy, in your note about [Mother of Babies E & F] arriving and [Baby E] crying and being really upset?

12

A. No.

13

Q. Okay. [Mother of Babies E & F] says that you told her it

2

1                   was the feeding tube irritating his throat. Why did you  
2                   tell her to go back upstairs if it was just an irritation?

3           A. I don't think I told her definitively she needed to go  
4                   and leave the unit, we just often advise parents at  
5                   night to go and get some rest.

6           Q. Okay.

7           A. So I think it was said in that intent rather than saying  
8                   she had to leave.

9           Q. Okay. At 9 o'clock?

10          A. No, I've documented it at 10 o'clock.

11          Q. It was explained to Lucy Letby that [Mother of Babies E & F] had  
12                   obtained her mobile telephone records and insisted that  
13                   her visit was 9 pm:

14                   What time have you got that [Mother of Babies E & F] had  
15                   attended?

16          A. Approximately 8 o'clock, 10 o'clock.

17          Q. In fact it's in 24-hour, so it says 20.00 and then  
18                   22.00.

19          A. Yes.

20          Q. Okay.

21          A. And that she was here, present at the start of the  
22                   shift, attending to cares.

23          Q. Okay.

24          A. And I'm not sure how long she stayed for after attending  
25                   to the cares.

2

1 Q. Is there any reason, Lucy, that what you've documented  
2 in your notes could be incorrect?

3 A. No. So did mum come down again at 10 o'clock? I put  
4 that she visited at the start of the shift attending to  
5 cares. I haven't put when she left.

6 Q. Okay. Is that something you would document in your  
7 notes if a baby has blood round its mouth?

8 A. It would be documented somewhere, either on the fluid  
9 chart or in the notes.

10 Q. Lucy Letby was shown the telephone records and reminded  
11 of the reasons that [Mother of Babies E & F] said this took  
12 place at 9 pm. She was asked:

13                   Do you agree, Lucy, that that paints a different  
14 picture to what's recorded in your notes?

15 A. On the notes, yeah. Can I just have a look at the fluid  
16 chart?

17 Q. Yeah, of course you can.

18 A. Okay.

19 Q. Okay.

20                   Can I pause there: was the fluid chart shown to  
21 Lucy Letby at that point?

22 A. Yes, I believe so.

23 Q. Okay, I'll ask the question again: does that account  
24 differ from what is documented in your notes?

25 A. Yeah, so I haven't written about any blood coming from

1

2

1 [Baby E]'s mouth in the notes.

2 Q. Okay.

3 A. I haven't documented on his chart either until

4 21.00 hours.

5 Q. Can you explain that to me?

6 A. I've made an error. I've put "approximately 10 o'clock"

7 and it must have been before that.

8 Q. Then one officer asks the other:

9 Do you want to ask anything?

10 If you have witnessed blood as [Mother of Babies E & F]

11 describes, what would your action be?

12 A. To give suction to suck the blood out of the mouth.

13 Q. Who would you inform?

14 A. Another member of staff or doctors.

15 Q. Would you look at that as a serious situation?

16 A. It depends how much has come out. I don't know if this

17 is a mucousy amount of blood that would look a lot that

18 isn't a large amount. I don't recall.

19 Q. It upset [Mother of Babies E & F], didn't it, because she

20 then goes and calls her husband?

21 A. Yes. I can understand any -- any amount of blood would

22 be upsetting to a parent, yeah. I'm really sorry that

23 she feels that way.

24 Q. But if you saw lots of blood coming out of a baby's

25 mouth, what would you do? What would be your --

1

1 A. To suction that blood to clear the airway and then  
2 escalate it.

3 Q. Escalate it. So when you talk about escalation what  
4 is that then Lucy?

5 A. To the -- a band 6 or the nurse in charge.

6 Q. Okay, and ultimately the doctor?

7 A. Yes.

8 Q. Okay. From the evidence that we have read out to you,  
9 Lucy, you were at [Baby E]'s cot side when his mum,  
10 [Mother of Babies E & F], walked in when he had blood  
11 around his mouth. Do you agree with that?

12 A. From [Mother of Babies E & F]'s recollection, yes.

13 Q. Do you agree, having spent time looking at them, that  
14 the time on your notes is incorrect?

15 A. Yes, I've written an approximation of 22.

16 Q. Mm-hm.

17 A. And that it seems the event was before that, yes:  
18 "Aware that we've had blood and was starting  
19 different medications."

20 She was updated by Reg Harkness so to me that reads  
21 that by the time he had been on to the unit.

22 Q. By what time, sorry?

23 A. Approximately 22.00. Do we have the time that  
24 Reg Harkness came?

25 Q. Lucy Letby was informed that Dr Harkness' note recorded

2

1 10 pm. And she was asked:

2 Did you make any attempts to clean up the blood?

3 A. I don't remember, but I don't think I would have left  
4 him with blood in his mouth.

5 Q. Why didn't you escalate it then, Lucy, like you've just  
6 said that you would have done?

7 A. I don't remember that. I don't know whether I did  
8 escalate it or not. I thought Belinda Simcock was  
9 involved at some point but I don't know at what point  
10 I escalated or what I was escalating. I'm not sure when  
11 I called the reg though. Does it say I called him  
12 before that? Do we have a bleep time? It may have been  
13 that he attended, couldn't come straightaway.

14 Q. Your notes have given the time on them, Lucy.

15 A. Yes, the time that he attended the unit and reviewed  
16 him.

17 Q. Mm-hm.

18 A. It may have been that I contacted him prior to that.

19 I've put that:

20 "[She] came down again at approximately 22.00 hours,  
21 aware that we've obtained blood from his NG tube and was  
22 starting different medications. She was updated by  
23 Reg Harkness."

24 So at that point the registrar had been and started  
25 new medication.

2

1 Q. Mm-hm.

2 A. I'm not sure at what time he was called.

3 Q. Why haven't you noted the bleeding in the notes then?

4 A. I'm not sure.

5 Q. But there's nothing to support what [Mother of Babies  
6 E & F] is saying about the event at 9 o'clock?

7 A. No, at 9 o'clock I've documented that there was 16ml  
8 mucky aspirate, not blood.

9 Q. There's a bit of a difference though, isn't there, Lucy,  
10 between a mucky aspirate and blood around the mouth?

11 A. Yes, yes.

12 Q. And that's the mucky aspirate, Lucy, that you have  
13 documented in your notes that "SHO informed", yeah?

14 A. Mm, you see I don't remember contacting, whether it was  
15 done by a telephone call, in which case it wouldn't have  
16 been documented --

17 Q. Mm-hm.

18 A. -- that he told me over the phone to omit the feed.

19 Q. But he says he doesn't recall speaking to yourself.

20 A. No.

21 Q. Can you explain to me, Lucy, why the bleed which [Mother of  
22 Babies E & F], [Baby E]'s mum, witnessed was ignored?

23 A. As I say, I don't specifically remember that bleed and  
24 I think if it had been anything of the volume she is  
25 stating then it would have been escalated. I wouldn't

2

1 have just left him bleeding. I can imagine that any  
2 amount of blood, however small, would be very concerning  
3 to a parent --

4 Q. Yeah.

5 A. -- whether that a tiny amount or what they view to be  
6 a lot.

7 Q. Is this because you intentionally caused harm to [Baby E],  
8 Lucy?

9 A. No -- have I caused this bleed?

10 Q. Yes.

11 A. No, no.

12 Q. Is it that [Mother of Babies E & F] has walked in whilst  
13 you're attacking him?

14 A. No.

15 Q. Is that why you told [Mother of Babies E & F] to go back  
16 upstairs, Lucy?

17 A. I don't recall definitively telling her to go upstairs.  
18 I believe my advice was to go upstairs and get some rest  
19 and we will contact you if there are any changes.

20 Q. Lucy Letby was informed that Dr Marnerides view was that  
21 the cause of death was unascertained and she replied...

22 A. No, I believe at the time with -- he was -- the  
23 consultant felt it was necrotising enterocolitis that he  
24 had died from.

25 Q. What are your thoughts on that?

1 A. Well, that's what the consultant and doctors at the time  
2 felt that it was. Babies with necrotising enterocolitis  
3 do get discolouration of the bowel.

4 Q. Mm-hm.

5 A. They can bleed as a result.

6 Q. Is there any explanation you can give, Lucy, as to why  
7 the bleed witnessed by [Mother of Babies E & F] was never  
8 recorded and why you didn't take any immediate action to  
9 seek help from anyone?

10 A. No.

11 Q. That part of the interview then concluded.

12 A. Yes.

13 Q. We can move on to page 40 of [Baby E]'s interview  
14 summaries. It's the third interview in time and it  
15 takes place on 10 November 2020.

16 It begins with the officers summarising events  
17 surrounding [Baby E] and what Lucy Letby had said on the  
18 last occasion she was interviewed. Then the question is  
19 asked:

20 Is there a reason why [Mother of Babies E & F] couldn't  
21 visit [Baby E] when she was -- when he was being cleaned, Lucy?

22 A. No. We might advise the parent not to be there but  
23 would never ask, you know, shut the door and say they  
24 can't come through, no.

25 Q. So if a parent wanted to be there at that time you would

1

2

1 allow that?

2 A. I would personally, yeah. I don't see why the others  
3 wouldn't either.

4 Q. Dr Harkness, he's provided a statement. He states that  
5 at 22.00 hours he was asked by you to review [Baby E]. Do  
6 you remember showing an aspirate to Dr Harkness around  
7 that time?

8 A. I remember the aspirate, yes, yeah.

9 Q. Was that aspirate that you showed to Dr Harkness from  
10 [Baby E], Lucy?

11 A. Yes.

12 Q. Tell me about the photograph you took of [Baby F] once  
13 [Baby E] had passed away. Do you remember?

14 A. If I took any photographs of [Baby F]?

15 Q. Yes.

16 A. I don't recall. I think -- I think I did separate  
17 photos, but they didn't want photos of them both  
18 together.

19 Q. So do you remember taking a photograph of [Baby F] with  
20 a teddy bear?

21 A. I don't remember specific photographs, no. I know that  
22 I did -- I think I did take some photographs of [Baby E].

23 Q. The officers then turn to telecommunications:

24 At 9.06 hours on the 4th, you've messaged [Nurse A]  
25 and said:

2

1                   " He was IUGR and REDF plus prem and query Down's, so  
2                   guess he was very high risk. It was just awful because  
3                   he was bleeding from everywhere during resus. Got him  
4                   back but gas incompatible. Parents completely  
5                   distraught. I feel numb."

6                   Do you remember that conversation?

7           A. Yeah.

8           Q. Was that accurate, what I've just gone through there,  
9                   Lucy, from what you recall?

10          A. Yes.

11          Q. Was he bleeding from everywhere?

12          A. Yeah.

13          Q. Where exactly was he bleeding from, can you remember?

14          A. His nasogastric tube, his mouth and I think he passed  
15                   some rectally as well.

16          Q. Is that description that you've said in your message  
17                   reflected anywhere in the clinical or nursing notes that  
18                   you can recall?

19          A. I'm not sure.

20          Q. But why was he high risk, Lucy?

21          A. Because he was a premature twin with other risk factors.

22          Q. What does "gas incompatible" mean?

23          A. That he has had a blood gas but it -- it's not really  
24                   compatible, there's not a lot we can do to reverse it,  
25                   which means ultimately he will pass away.

1

2

1 Q. At 20.09 hours on the 4th you've had a message  
2 conversation with Jen and said:

3 "He had massive haemorrhage. Could have happened to  
4 any baby."

5 Do you recall that message?

6 A. No.

7 Q. Was that right, that it could have happened to any baby?

8 A. Yeah, I think any baby could have a haemorrhage, yeah.

9 Q. A massive haemorrhage in the way you've described it  
10 in that previous text?

11 A. I would think so. You know, I'm not a doctor, but --

12 Q. You went on to say that it was an abdominal bleed. How  
13 did you know that Lucy?

14 A. Because we were getting blood back from his NG tube and  
15 I think he passed blood rectally, which would indicate  
16 that it was an abdominal issue.

17 Q. Okay.

18 And that was the conclusion of that part of that  
19 interview.

20 If we move on to the next interviews, please, in  
21 respect of [Baby F], [Baby E]'s brother. We see the  
22 first interview beginning [redacted], which in fact  
23 took place on 10 June 2019, so the second occasion  
24 upon which Lucy Letby was arrested.

25 A. Yes, that's correct.

1 Q. Again, is it right this is part of a longer interview  
2 that this has been distilled from?

3 A. Yes.

4 Q. It begins insofar as this document is concerned:

5                   So we're going to move on to [Baby F] and we're  
6 going to talk to you about him now. He was a baby boy,  
7 it's the second of identical twins born at 17.54 hours  
8 on 29 July 2015. His sibling, [Baby E], died the  
9 following day and is also part of this inquiry.

10                  That's in fact an error it wasn't the following day:

11                  [Baby F] was on parenteral nutrition which was  
12 administered intravenously and at 00.25 hours on  
13 5 August the bag was changed. Immediately afterwards  
14 [Baby F] experienced a sudden rise in heart rate, became  
15 tachycardic, and the results of blood glucose tests  
16 suggest he suffered an unexpected hypoglycaemic episode.

17                  [Baby F]'s blood glucose levels rapidly improved  
18 when the parenteral nutrition was stopped and he left  
19 the Countess of Chester Hospital on 13 August 2015.

20                  Lucy, did you inflict an injury to [Baby F]?

21 A. No.

22 Q. Do you remember [Baby F], Lucy?

23 A. Yes.

24 Q. What do you remember about him?

25 A. I just remember him more as being the surviving twin of

1

2

1 [Baby E].

2 Q. Is there anything you can tell me about your involvement  
3 with [Baby F]?

4 A. No, I don't recall the incident other than looking  
5 at the notes there.

6 Q. Okay, right. Are you aware of any other person  
7 inflicting injury to [Baby F], Lucy?

8 A. No.

9 Q. Lucy Letby confirmed that she had the relevant notes.  
10 She was asked:

11           Okay, what we talk about now, is that going to be  
12 from your memory or is that from the notes you've been  
13 provided?

14 A. Notes provided. I don't recall this, this day at all.

15 Q. Okay. Were you the designated nurse for [Baby F] on  
16 this day, Lucy?

17 A. No.

18 Q. Could you describe what that form is to me, please?

19 A. So this is a TPN chart for his fluids and myself and  
20 another nurse have signed for that bag.

21 Q. I wonder if Mr Murphy could put tile 147 up:

22           Could you describe what that form is to me, please?

23 A. So this is a TPN chart for his fluids and myself and  
24 another nurse have signed for that bag.

25 Q. I wonder if perhaps Mr Murphy could just scroll down.

2

1 I'm not going to refer specifically to it but if  
2 everybody refreshes their memory from the form:

3 If you go down to the ingredients, what's in there?

4 A. Well, this is a standard bag, so we would check it  
5 against the label that's on. There's a label on the  
6 actual bag that would reflect this. So we'd check the  
7 values against what was actually in on the bag.

8 Q. Okay. Then moving down to the next session, where it  
9 starts "feed log", what does that say?

10 A. That's what they've worked out as being within the bag,  
11 so the log that's done by the pharmacy.

12 Q. Okay.

13 A. And again we would check that against the label that was  
14 on the bag.

15 Q. Okay. So this parenteral nutrition, where would it be  
16 kept?

17 A. In -- in the locked fridge.

18 Q. So this is the locked fridge that you were describing to  
19 us in the previous interview?

20 A. Yes.

21 Q. Next to the nurse's station in the equipment room?

22 A. Yes.

23 Q. Sorry that was her answer, I'm jumping ahead:

24 Yes, okay. So this is the same key that's passed  
25 around with the nurses to gain access to that fridge?

2

1 A. Yes.

2 Q. Okay. Is there a particular shelf this would be kept  
3 on?

4 A. Yeah, the TPN is usually all kept together near the  
5 bottom of the fridge, I think.

6 Q. Okay. You said this is prescribed, so would it have had  
7 the name of the baby on it?

8 A. Yeah, it would have had "Twin 2 [Surname of Babies E & F]" on it.

9 Q. What other information would be on that label, the bag?

10 A. All the information that's here, so the baby's date of  
11 birth, the ward, the CC number, and all these figures  
12 that we see here.

13 Q. Okay. And that TPN bag or the TPN bags where would they  
14 be kept in comparison to the insulin that we discussed  
15 before?

16 A. To insulin?

17 Q. Yes. Would that be in the same fridge?

18 A. Lower down in the fridge.

19 Q. Lower down in the fridge?

20 A. The bags are lower down, yeah.

21 Q. Okay so the insulin's at the top of the fridge, is it?

22 A. Yes.

23 Q. Okay and who would have access to that fridge other than  
24 the nurses? Anyone else at all? You're saying the key  
25 is being moved around between the nurses.

2

1 A. Mm-hm. Sometimes the nursery nurses might go into the  
2 fridge. The pharmacist would have access. Doctors  
3 would occasionally go in if we gave them the keys.

4 Q. Right, but it would all come through the same key, would  
5 it?

6 A. Yes.

7 Q. There isn't another set of keys that someone else has?

8 A. Not that I'm aware of, no.

9 Q. Okay. And this TPN bag, what -- could you describe to  
10 me what it looks like?

11 A. So it -- it's a bag of fluid and it's yellow in colour  
12 and then it's got a red bag over the top of it with  
13 another label on with this information.

14 Q. Okay. Is there a reason why there's another bag over it  
15 at all?

16 A. It's to protect it from the light.

17 Q. So it's light-sensitive?

18 A. Yeah.

19 Q. What effect does light have on it if it is to get in?

20 A. I'm not sure what effect it would have. We're just told  
21 that we always need to keep it covered.

22 Q. Okay. You say it's yellow in colour. Is there any port  
23 to this particular bag to add things to it?

24 A. No, there's the end valve that you'd break off to attach  
25 a syringe. I don't think there's anything else.

2

1 Q. Right. And is it something that you can add things to  
2 if needs be?

3 A. No, we don't add to TPN.

4 Q. No?

5 A. That's -- it's made by the pharmacy and it's a secure  
6 bag. We don't.

7 Q. Right. Is there any reason at all at any time you would  
8 add anything to the TPN bag?

9 A. No, not that I'm aware of no.

10 Q. No. But is it designed, if someone wanted to add  
11 something to it, would it be -- is it designed for that  
12 purpose, is there an access port?

13 A. Not sure. I can't remember if that one has got a port  
14 or not.

15 Q. Okay. Is there a -- can you explain to me the process  
16 of actually obtaining and administering this nutrition?

17 A. So it's -- the specific bags for the patients are  
18 prescribed on a set TPN form, so that gets sent over to  
19 the CIVAS unit in pharmacy and then they make up the bag  
20 according to what's written on that form.

21 Q. Okay. That bag then is obviously taken to the fridge  
22 somehow. Who does that?

23 A. It's brought up by the pharmacy technicians in the day.  
24 Sometimes either they put it in the fridge or a member  
25 of staff will take it from them and they put it into the

1

2

1           fridge.

2       Q.    Okay.  Do you remember who actually obtained this  
3            nutrition from the fridge for [Baby F]?

4       A.    No, I don't, no.

5       Q.    No, but you signed and dated that, yeah?

6       A.    Yes.

7       Q.    What does that actually mean then, the fact that your  
8            name's against that particular form?

9       A.    That I've checked that bag with that person.

10      Q.    Right.  So are we saying that you've administered this  
11           particular bag or not?

12      A.    I don't recall from memory.  I don't know.

13      Q.    All right.  Who else has signed that prescription, Lucy?

14      A.    [Nurse A].

15      Q.    Okay.  And you described before to my colleague about  
16           the nutrition being kept in these bags, you told me.  
17           Tell us about it coming in a red bag as well.  That red  
18           bag, is it sealed?

19      A.    No.

20      Q.    Is it delivered in those red bags to the unit?

21      A.    Yeah.

22      Q.    And then is the TPN stored in the fridge with those red  
23           bags?

24      A.    Yes, and then we take it off to check the bag underneath  
25           matches the details on the label.

1

2

1 Q. Okay. And?

2 A. So it should be a three-way check, so you're checking  
3 the chart, the bag, and the red bag.

4 Q. Okay. And tell me where those checks take place?

5 A. Usually at the bedside -- well, in the nursery of the  
6 baby, either at the bedside or wherever you're drawing  
7 up the fluid.

8 Q. So it comes with a red bag on top of it. Does that man  
9 that there's a label or a prescription label on that red  
10 bag as well as the TPN bag itself?

11 A. So there's -- yeah, there's a label like this, of this  
12 half up on the red bag [as read]. It's specific to that  
13 patient, yes.

14 Q. Right okay. Can you just go through the process, Lucy,  
15 of how you would connect this bag to a baby?

16 A. So it depends if you -- if you're starting it fresh you  
17 would have to get a new giving set and insert a giving  
18 set into the bag, run the fluid through, and then  
19 connect it to the baby. Or sometimes we just do a fluid  
20 bag change so the bag would literally just be unscrewed  
21 from the existing line and the new one put on.

22 Q. Okay. Is that done with someone or?

23 A. Yes.

24 Q. It is all the time?

25 A. Well, we try to, yeah.

2

1 Q. Does it automatically start then? Is there a process  
2 you have to do for it to start?

3 A. No. If we were starting it from scratch, we would have  
4 to put up the giving set through the pump and set the  
5 pump.

6 Q. Right.

7 A. Or if it was just a bag change then the pump would  
8 already be programmed and you'd just change the bag.

9 Q. Right, okay. You discussed before about protecting from  
10 infection and stuff. Is that a similar sort of process  
11 where one -- there will be a --

12 A. It's sterile, yes.

13 Q. Sterile, okay.

14 A. Yeah.

15 Q. Then you talk about the pump. How's that sort of  
16 controlled?

17 A. So the pump -- if I'm setting it up or if I'm doing  
18 a bag?

19 Q. If you're setting it up.

20 A. So if I was setting it up then you'd have two people  
21 there, you'd run the giving set through the pump, and  
22 you'd both check the volume that was being infused, set  
23 a volume, an hourly rate, and a volume to be infused,  
24 and then you'll both connect that to the baby and start  
25 it.

2

1 Q. Okay. And if it was being simply replaced with or for  
2 another one?

3 A. You wouldn't need to touch the pump other than to pause  
4 it just whilst you're changing the bag.

5 Q. And how is that done, how's it paused?

6 A. There's a button on it.

7 Q. Right. This particular bag that you've -- there's  
8 a signature for a time, 00.25. Do you remember any  
9 involvement with connecting that bag at all to [Baby F]?

10 A. No, I don't sorry.

11 Q. Right. Is there no sort of system that would suggest  
12 whether you connected that or you wouldn't have to  
13 physically put in the notes to say that "I've connected  
14 this bag"?

15 A. No. So say it's usually -- it's the first signature  
16 usually is the person that's giving it, but not -- it's  
17 not a set policy, that's just how other people tend to  
18 do it.

19 Q. Right. In relation to that prescription, Lucy, do you  
20 specifically recall your involvement?

21 A. No.

22 Q. Lucy, is there a policy in respect of these bags and  
23 reconnecting old bags at all, if need be? Are you  
24 allowed to do that if --

25 A. Reconnect an old bag?

1

2

1 Q. Yeah.

2 A. No, you shouldn't do because you've broken the line. So  
3 once that bag's disconnected it's potentially open to  
4 the air, so it's --

5 Q. Right.

6 A. It's not a sterile unit then.

7 Q. Are there any circumstances where you'd connect the same  
8 bag?

9 A. Take the bag off and reconnect it?

10 Q. Yes.

11 A. No.

12 Q. What would happen to that bag?

13 A. It just gets disposed of.

14 Q. Okay. Is that in the room or --

15 A. Yeah.

16 Q. Okay.

17 A. Well, some people do it in the room. You're supposed to  
18 go to the sluice and do it and put it in the dirty sink  
19 in the sluice.

20 Q. Lucy Letby confirmed that her signature appeared on  
21 [Baby F]'s observations chart at 5 am. She explained  
22 she may have been helping out a nurse who'd gone on  
23 their break.

24 Can we move to page 2:

25 Lucy, explain to me what that page refers to.

2

1                   If we can put up tile 152, please.

2     A. So this is the intensive care chart, so we've got as  
3       part of those observations I've read -- done a drip  
4       reading at 5 am and a blood sugar and I've also  
5       documented his respiratory support as well.

6     Q. Okay. And are any of those readings of concern to you  
7       at all?

8     A. Well, those are -- his respiratory settings have  
9       remained the same. Looking here, his blood sugar's 2.9  
10      I'm not sure what it had been prior to that. That's  
11      potentially a little bit low.

12    Q. Is that something you would expect in a baby?

13    A. It's unusual for a baby that's on full fluids.

14    Q. Okay. So this is -- what's this a sign of to you then?

15    A. That I'm not sure what his sugars were prior to that.  
16      Potentially something's changed.

17    Q. Okay, so if you have a look at the 11 o'clock. I know  
18      your signature is not next to it, but it's got the word  
19      "off".

20    A. Yeah.

21    Q. What would that mean to you?

22    A. That somebody's turned the fluids off.

23    Q. Okay. And why would that --

24    A. To fill that hour, the pump hasn't been running.

25    Q. Why would that happen? Why would that be done, do we

1

2

1 know?

2 A. I'm guessing it's because there's been an access issue.

3 Sometimes if they haven't got a cannula to run it

4 through, if that's tissued or leaking, then he would

5 have been without fluids.

6 Q. And obviously that sugar level at 2.9 there, have you

7 done anything or given anything to [Baby F] to try and

8 increase that sugar level?

9 A. No.

10 Q. And can you explain what updates you would have given

11 the designated nurse on return from her break?

12 A. So I would have informed her what the blood sugar was.

13 Q. Okay.

14 A. And informed her of these observations and that I have

15 decreased the incubator temperature in response.

16 Q. Why -- explain why you would have updated her about

17 those.

18 A. Because I've made a change to her baby while she's not

19 been there.

20 Q. Can you just move to page 3 for me, please, Lucy. What

21 is that chart?

22 If we pause there and go to tile 191, please.

23 A. So this is a fluid chart.

24 Q. Okay. If you look at the three highlighted sections,

25 I take it that would have been on her copy that she was

2

1                   given?

2       A. Yes, it was, yes.

3       Q. Can you confirm that's your signature there for me?

4       A. Yes.

5       Q. And the times for those, please?

6       A. 03.50, 04.10, 04.20.

7       Q. All for 5/8, am I right in saying, 2015?

8       A. Yes.

9       Q. Okay. What are you actually giving at that point?

10      A. So a glucose bolus, a saline bolus and then 10% dextrose  
11           commenced.12      Q. Okay. And is there a reason for this -- for these  
13           medications?

14      A. Because he's got low blood sugar I've given a bolus.

15      Q. Okay. So this is all to try and bring that blood sugar  
16           up to now, yeah?

17      A. Yes.

18      Q. Okay and your signature appears at the top of the first  
19           one and at the bottom of the next two; is that correct?

20      A. Yes.

21      Q. As you explained before, it does not mean that any of  
22           those were administered by yourself or by --

23      A. No, I can't conclusively say who -- who gave those.

24      Q. Do you recognise the other signature for those three?

25      A. I think it's [Nurse A].

2

1 Q. So the readings that you had taken there, the low blood  
2 sugar and then administration of dextrose on a couple of  
3 occasions, it's a sign that [Baby F]'s not doing so  
4 well? Am I right in saying that?

5 A. Yeah. I would say something's changing.

6 Q. Okay.

7 Lucy Letby was then shown the blood gas record  
8 chart, which is tile 181, please:

9 Okay. Can you explain to me off that chart there  
10 the rapid decrease in glucose from the reading obtained  
11 at 01.54 on the 5th? Do you see how we've got the  
12 glucose referrals of 3.8, 5.5, and then on 5 August  
13 there's a space and it drops to 0.8?

14 A. No.

15 Q. What is that a sign to you -- what do you think is  
16 happening there with [Baby F]?

17 A. Something's happening for him to drop his blood sugars.

18 Q. That's extremely low, isn't it, 0.8?

19 A. Yes.

20 Q. Is that dangerously low?

21 A. Yes.

22 Q. Okay, but you don't know what has happened to [Baby F]  
23 to cause those blood sugars and what's going on inside  
24 him to cause those --

25 A. No.

2

1 Q. -- blood sugars to drop like that?

2 A. No.

3 Q. In your experience have you ever seen a baby with such  
4 low blood sugars?

5 A. Yes.

6 Q. You have and what was the cause of that?

7 A. We've had a few babies on the unit that have had a  
8 hyperinsulinaemia, which is what I spoke about before at  
9 the end, a crying condition (sic) that they're born  
10 with.

11 Q. Right, okay.

12 A. And they've had very low blood sugars and we've had to  
13 use a lot of dextrose and they've ended up being taken  
14 to Alder Hey.

15 Q. Okay. There's just one more, sorry. If you can go to  
16 page 5 of the chart, that's another prescription chart,  
17 isn't it?

18 A. Yes.

19 Q. That's tile 146, please, Mr Murphy.

20 My Lord, if we can just pause there. If we go back  
21 up, and we'll check, but the second reply down, the  
22 "crying condition", we're wondering if that should say  
23 "endocrine", which of course is to do with the insulin  
24 and the hormonal system. We'll double-check that. It  
25 doesn't seem to be a crying condition.

1

2

1 MR JUSTICE GOSS: This will have been an audio typist  
2 listening to the recording of this and typing what they  
3 thought they could hear.

4 MR ASTBURY: And I'm afraid I missed it up until now. We'll  
5 double-check that.

6 MR JUSTICE GOSS: I will just make a note of that.

7 Thank you.

8 MR ASTBURY: Thank you.

9 So if we scroll up a little bit, please, Mr Murphy.

10 Th officer says again:

11 So that's another prescription chart, isn't it?

12 A. Yes.

13 Q. Do you recognise that signature?

14 A. Yeah, that's mine.

15 Q. And what's that prescription for?

16 A. So I've signed for a lipid syringe. The syringe  
17 number's there, and I've signed for that.

18 Q. Can you tell me what lipid -- what's the purpose of  
19 that?

20 A. Lipid accompanies the TPN as part of their nutrition, so  
21 it -- it's fats, basically, lipid.

22 Q. Right. So?

23 A. And that's run as a separate syringe to the TPN.

24 Q. Okay. Is that kept in the fridge?

25 A. Yeah, it's kept in the same bag usually as the TPN.

1

2

1           It's a white syringe.

2   Q.  Right.  So it's kept with the TPN, yeah --

3   A.  Yes.

4   Q.  -- in the same fridge?

5           Okay.  Do you remember that particular drug when you  
6       signed for it?  Is that something you remember going to  
7       the fridge for at all?

8   A.  No I don't, no.

9   Q.  Again so would this suggest that you might have or you  
10       might not have administered that particular lipid --

11   A.  Yes.

12   Q.  -- to [Baby F]; is that right?

13   A.  Yes.

14   Q.  But you -- it's clear that you're involved in his care  
15       at that particular time?

16   A.  Yes.

17   Q.  Okay.  And there's no other signature there, is there?

18   A.  No.

19   Q.  Is there a reason for that?

20   A.  It might just be an oversight.  Ideally, you would have  
21       it signed -- when you checked the TPN bag, you would  
22       do -- sign both syringes, you'd sign up here for the TPN  
23       and the lipid.

24   Q.  Lucy, you said before that it's kept in the same bag.

25       Explain what you mean by that.

2

1 A. So it's prescribed for a baby which this is -- it comes  
2 up in a pack with the red bag, the TPN, and then a  
3 syringe comes up as well with a giving set on it, the  
4 lipid syringe.

5 Q. So that's tucked inside the red bag or?

6 A. No, it's not in the red bag, it's in -- in a clear bag  
7 with --

8 Q. Right.

9 A. So the TPN is with the red bag and there's a lipid  
10 syringe and that's within a bag.

11 Q. Right. And inside there is the syringe and the red bag?

12 A. Yes.

13 Q. Tell me how long the lipid would last for?

14 A. 24 hours I think it is --

15 Q. Okay.

16 A. -- normally.

17 Q. And how long would the TPN last for?

18 A. The TPN is 36.

19 Q. Okay.

20 A. It's different, I think, from memory.

21 Q. Were you aware, Lucy, of the concerns for [Baby F]  
22 regarding his blood sugar levels at the time?

23 A. No.

24 Q. It's not something that sticks in your mind or was  
25 discussed amongst staff members or with doctors?

2

1 A. Not that I recall, no.

2 Q. No?

3 A. I don't know. I don't remember this day. I don't  
4 remember a doctor being there.

5 Q. Do you remember any involvement with [Baby F] after  
6 5 August?

7 A. No, I know I've -- I've looked after [Baby F] before he  
8 went home. I don't -- I don't recall the specific  
9 dates.

10 Q. Are you responsible for the attempted murder, Lucy, of  
11 [Baby F] on the 5th?

12 A. No, no.

13 Q. Did you cause him any significant harm on 5 August?

14 A. No.

15 Q. Are you aware of anybody else causing him significant  
16 harm?

17 A. No.

18 Q. Did you unintentionally cause him harm on 5 August?

19 A. Not that I know of, no.

20 Q. We talked about insulin and the effects of insulin,  
21 didn't we, on blood sugar levels? Did you inject  
22 insulin into [Baby F]?

23 A. No. Can I just ask a question about this, in terms of  
24 the bags and everything?

25 Q. Yeah.

2

1 A. I'm assuming they were -- they haven't been kept or  
2 checked, you know, post-events?

3 Q. Would they be? Would they be kept somewhere? You said  
4 that they might be.

5 A. No, it would be disposed of. That's what I'm saying,  
6 we've got no bags.

7 Q. Well, if you -- the date of it is 2015.

8 A. Yeah.

9 Q. Is it likely that the bags would be kept --

10 A. No.

11 Q. -- for that long?

12 A. No.

13 Q. You've asked the question. So are there occasions when  
14 they might be?

15 A. I -- if there's a baby that there's been a concern about  
16 we would keep the bag usually and ask somebody to check  
17 that bag or check the pump.

18 Q. Okay.

19 A. If there's an unexplained...

20 Q. Are you aware if that was the case with [Baby F]?

21 A. No, no, that's what I'm asking, if anything was kept.

22 Q. Right. Would you know where they would keep that?

23 A. If there's a concern it would usually be kept in the  
24 sluice.

25 Q. Right. Okay, is that on the neonatal unit?

2

1 A. Yes.

2 Q. Would that have been recorded anywhere if there was  
3 a reason to keep any equipment?

4 A. Mm, no, it was just -- they'd usually just write on the  
5 bag, you know, can we have this bag checked, and the  
6 shift leader would pass it on to the next member of  
7 staff.

8 Q. Okay. Is there a reason why you've asked that question?  
9 What's going through your mind?

10 A. When something's happened in that time you're asking me  
11 if I have given him insulin. I'm wondering if there's  
12 an issue with something else.

13 Q. Right, okay. Obviously we'll look into that but I doubt  
14 4 years down the line --

15 A. No.

16 Q. And that concluded the interview so far as [Baby F] was  
17 concerned on that date.

18 A. Yes.

19 Q. Thank you. A second interview for [Baby F] took place  
20 on 12 June 2019.

21 A. Yes, that's correct.

22 Q. Again we can see the time set out on the form and the  
23 persons present. The officers summarised the earlier  
24 interview regarding [Baby F]. Then began with the  
25 question:

1

2

1                   At 00.10 hours on 3 August, Lucy, a TPN bag has been  
2                   changed and there was only one signature on the  
3                   prescription, which you stated was an oversight; do you  
4                   agree?

5                   A. I think that was on the lipid chart, was it?

6                   Q. There's a copy there. I think it was. Just have  
7                   a little look. Yeah, it was one signature; yes?

8                   A. Yes, for the lipid yes.

9                   Q. In fact that first question should read 4 August,  
10                   shouldn't it?

11                  A. Yes.

12                  Q. Thank you -- in fact, no, that's the first bag, isn't  
13                  it?

14                  A. Yes.

15                  Q. So that is right, the 3rd.

16                  A. And then --

17                  Q. At 00.25 on 5 August, two signatures were on the  
18                  prescription and you confirmed that the order of  
19                  prescriptions did not reflect who connected the bag; do  
20                  you agree?

21                  A. Yes.

22                  Q. Okay. Did you attack [Baby F], Lucy?

23                  A. No.

24                  Q. Did you intentionally administer insulin into  
25                  [Baby F] --

2

1 A. No.

2 Q. -- knowing that it would cause his collapse --

3 A. No.

4 Q. -- and potentially cause him to die?

5 A. No.

6 Q. Did you attempt to murder [Baby F]?

7 A. No.

8 Q. Did you administer --

9 A. No.

10 Q. -- insulin into the bags of TPN, Lucy?

11 A. No.

12 Q. Then she carried on.

13 A. Was his TPN bag checked?

14 Q. When?

15 A. After the event. You're saying that the insulin was put  
16 in there. How do we know that insulin was put in there  
17 when we've checked the bag?

18 Q. It's some time since the event, isn't it?

19 A. Yes.

20 Q. And I ask the question again to you: did you administer  
21 insulin?

22 A. No.

23 Q. The police continue to suggest someone had administered  
24 insulin to [Baby F] and Lucy Letby replied...

25 A. I didn't.

1

2

1 Q. You did?

2 A. No.

3 Q. Did you attempt to murder [Baby F]?

4 A. No.

5 Q. That interview then concluded.

6 Moving to the third interview in respect of  
7 [Baby F], beginning at [redacted], we can see that that  
8 began at 16.58, or this portion of it did, the interview  
9 began earlier, on 10 November 2020.

10 A. Yes.

11 Q. And it began:

12 Okay. We'll move on to [Baby F], [Baby E]'s twin  
13 Lucy. [Baby F] was the second of the identical twins  
14 and was admitted to the NNU after birth.

15 It was recorded that [Baby F] had an abnormally high  
16 level of insulin, 4,657 picomoles per litre. The  
17 insulin C-peptide level was very low, less than 169.  
18 Do you want to say anything about that summary of him,  
19 Lucy?

20 A. No, I don't know what those figures mean or anything.

21 Q. The statement of Shelley Tomlins states that at 7 pm she  
22 connected a 15% dextrose infusion along with  
23 [Nurse C] and [Baby F]'s blood sugars normalised  
24 rapidly.

25 I don't think, in fact, there was an answer to that

1

2

1           question --

2       A.  No.

3       Q.  -- if it was in fact a question:

4           So would you say that that's expected, that you'd  
5           expect that to happen, or do you say that's  
6           inconsistent?7       A.  No, I'd expect them to rise because we've given a bolus  
8           of sugar, so he should respond to that.9       Q.  Okay, so looking at your social media, Lucy, for  
10           [Baby F] and [Baby E], you've completed searches for  
11           their mother, [Mother of Babies E & F], on 6 August 2015 --  
12           these are all in the same year -- 23 August, 14 September, 5  
13           October, 5 November, 14 November, 7 December, then Christmas  
14           Day, 25 December, and then again on 4 January 2016, and then  
15           on 10 January 2016.16           As I say, they are searches that you've done on  
17           Facebook for [Mother of Babies E & F] and his -- and [Father of  
18           Babies E & F] as well.  Do you remember making those searches?

19       A.  No.

20       Q.  There's ten searches altogether -- nine for [Mother of Babies  
21           E & F], one for [Father of Babies E & F] -- going from August  
22           through to December and then, like I say, two in January.  
23           Have you got any explanation for why that number of searches  
24           were made for those parents?

25       A.  Only if it was to see if there was anything to see how

1

2

1 [Baby F] was doing.

2 Q. Why would you want to know how [Baby F] was doing?

3 A. Because as a member of staff you care about what happens  
4 to the babies and obviously they've been through  
5 a really difficult time.

6 Q. And do you recall if you found anything, Lucy?

7 A. I can't remember.

8 Q. Was anybody else aware that you were making these  
9 searches for the parents?

10 A. No, I don't think so.

11 Q. Okay. So if you were looking to see how a baby was  
12 doing, would you be looking for a specific part of that  
13 account, comments that were being made or how would  
14 you --

15 A. Well, like, their profile photos of them, you know, with  
16 the baby.

17 Q. Right. I think I asked the question before about  
18 looking for a photograph of the baby, so is that  
19 a possibility then?

20 A. Yes.

21 Q. I take it you had success in accessing [Mother of Babies  
22 E & F]'s account for you to --

23 A. I don't recall.

24 Q. -- search on all these other dates? If it was blank on  
25 the first one, then you wouldn't be going back looking

1

2

1                   on the additional ones, would you?

2       A. No.

3       Q. Do you know the point I'm trying to make?

4       A. Yeah, but if it was just the profile picture that was --  
5                   that you could see --

6       Q. Right.

7       A. -- maybe I was looking to see if those had changed each  
8                   time.

9       Q. Okay.

10      A. I don't remember.

11      Q. So are we saying that [Mother of Babies E & F]'s profile  
12                   picture would possibly be with her son?

13      A. Yes.

14      Q. And that's what you would be looking for when you said  
15                   to see how he was getting on? So you're saying by  
16                   looking at the photograph you would know how her son was  
17                   doing?

18      A. Well, only visually just so to see that they were --  
19                   I don't know.

20      Q. Is there -- were you obsessed with this particular  
21                   family, Lucy?

22      A. No.

23      Q. [Baby F] was discharged on 13 August 2015 and [Baby E]  
24                   died on 4 August 2015. Five months later you are still  
25                   searching the family. Is there anything you want to

1

2

1                   comment on that?

2       A. No.

3       Q. Looking at your mobile phone, Lucy, and messages  
4                   exchanged in relation to [Baby E] and [Baby F], on  
5                   5 August 2015 at 8.53 in the morning you messaged  
6                   [Nurse A] who had looked at [Baby F] and night and  
7                   you told her that his sugar reading was 1.8 at 8 o'clock  
8                   in the morning. Is that low, a low reading?

9       A. Yes.

10      Q. Do you recall how you found that out?

11      A. I don't recall off the top of my head, no. I'm assuming  
12                   it's from looking at his charts.

13      Q. And do you know why you -- why did you find out what his  
14                   sugar reading was?

15      A. No, I don't know.

16      Q. Why did you do that? Why did you then send her the  
17                   message?

18      A. I don't remember. I don't think it was to report and  
19                   blame. It was just to keep her updated.

20      Q. And that was where that particular interview concluded.

21      A. Yes.

22      MR JUSTICE GOSS: That's probably as good a point as anyway  
23                   because the next interview is more substantial, and  
24                   we're moving on to another baby.

25      MR ASTBURY: Yes.

1

2

1 MR JUSTICE GOSS: So a bit early, but we'll have the  
2 ten-minute break now, otherwise we're going on until  
3 quite late.

4 (In the absence of the jury)

5 MR JUSTICE GOSS: Is this the point at which some sheets  
6 have to be changed?

7 MR ASTBURY: Yes.

8 MR JUSTICE GOSS: I thought it was. It was another reason  
9 for breaking off then?

10 (Handed)

11 MR JUSTICE GOSS: I'll leave you just to explain this to the  
12 jury when we come to it.

13 MR ASTBURY: Thank you.

14 MR JUSTICE GOSS: I don't know whether you want to do it  
15 before we start or --

16 MR ASTBURY: I will. It's easier that way.

17 MR JUSTICE GOSS: Thank you very much. Ten minutes, please.

18 Mr Murphy, juror number 9's iPad, please.

19 (2.55 pm)

20 (A short break)

21 (3.07 pm)

22 MR ASTBURY: Hopefully everyone has the first interview of  
23 [Baby G] open in their ring binder file with the page  
24 reference [redacted]. Before we begin that particular  
25 interview, my Lord, there is a formatting error on two

1

2

1 A. Yes.

2 Q. If we turn the page, please. The question begins:

3 So in June 2015 there were three deaths and one  
4 serious collapse. [Baby E] was in August of the same  
5 year and then obviously (inaudible: coughing) about  
6 [Baby I]...7 That's a reference to [Baby I], who had already  
8 been discussed, I think, in the interviews at this stage  
9 but we haven't reached her because we're dealing with  
10 the babies as they appear on the indictment?

11 A. Yes.

12 Q. Okay:

13 ... who had a multiple collapse [it should say  
14 "multiple collapses"] and passed away in September. So  
15 that's all those cases bar [Baby B], who survived. All  
16 in that really short period of time. What were you  
17 thinking during that period?

18 A. That it was a shock to have that many deaths.

19 Q. Even just those first four collapses and three deaths,  
20 all within, I mean, a couple of weeks in June, all in  
21 one month.

22 A. Yes.

23 Q. It must -- it must have been devastating.

24 A. Yes.

25 Q. And Lucy Letby was then asked to describe how she coped

2

1 with deaths on the unit in June 2015.

2 A. You just have to find a way to deal with it and carry on  
3 to provide the job and care that we do give.

4 Q. Okay. Did any -- at any stage you think, what on earth  
5 is going on here?

6 A. Yes, in terms of what we'd suddenly had a spike like  
7 that. Not in terms of why they had died, just that  
8 we were getting that number of babies in a short space  
9 of time.

10 Q. Did any of the staff sort of almost question with the  
11 hospital or with colleagues where the spike was coming  
12 from, maybe what could resolve it, what investigations  
13 needed to be made?

14 A. Not that I'm aware of, no.

15 Q. Did you yourself?

16 A. No.

17 Q. Okay. Why didn't you question the spike, this one that  
18 we've -- the babies that we've spoken about up to now?

19 A. In a formal way?

20 Q. Yeah.

21 A. Because I didn't feel that anything -- there was  
22 anything that needed to be -- maybe looked into. It was  
23 just a shock for everybody.

24 Q. Okay. Lucy, you dealt with all of these as well, didn't  
25 you?

2

1 A. Yes.

2 Q. What do you put that down to, bad luck?

3 A. Yes.

4 Q. And then Lucy Letby was asked questions about what  
5 happened to [Baby G] in the early hours of the morning  
6 and 7 September 2015:

7           Okay. Do you remember who the designated nurse was  
8 for [Baby G]?

9 A. [Nurse E].

10 Q. Okay. How do you remember that?

11 A. Because I remember that I -- that [Nurse E] was on her  
12 break when this happened with [Baby G].

13 Q. Do you remember where [Baby G] was in the unit?

14 A. Yes, in nursery 2.

15 Q. Do you remember what the clinical position was for [Baby G]  
16 at this point when you came on duty?

17 A. I don't remember there being any concerns.

18 Q. Okay. And whether or not [Baby G] was attached to any  
19 monitors at all?

20 A. I don't remember.

21 Q. You don't recall? Okay. Do you remember who you were  
22 the designated nurse for on this particular day?

23 A. No, I don't remember.

24 Q. Okay, were you working in the same nursery?

25 A. I don't remember.

2

1 Q. Okay. If you carry on through the notes there, Lucy, it  
2 says that:

3 " [Baby G] had a large projectile milky vomit at 2.15.  
4 Continued to vomit ++. 45ml of milk obtained from NG  
5 tube with air ++."

6 What can you tell us about that?

7 A. So I found that [Baby G] was vomiting.

8 Q. Okay. Can you tell us any more about that particular  
9 episode?

10 A. I just remember that there was a lot of vomit and that  
11 she was projectile vomiting.

12 Q. Okay. At this point in time who was responsible for  
13 [Baby G]'s care?

14 A. I believe [Nurse E] was the nurse looking after [Baby G]  
15 for that shift.

16 Q. Okay. Just going back to that first line, we've got:

17 "Care given from 02.00 to present."

18 Is there a reason why it's 02.00?

19 A. I must have taken over the care at that time.

20 Q. Okay. But you don't remember that?

21 A. I don't remember it, the exact time that I took over,  
22 no.

23 Q. What was your involvement with [Baby G] --

24 A. Okay.

25 Q. -- in that quarter of an hour period when you took over?

2

1 A. I don't remember.

2 Q. Sorry, do you remember how [Baby G] presented when you  
3 took over then at 2 o'clock? Were there any issues or  
4 concerns with [Baby G] at that time?

5 A. Not that I remember, no.

6 Q. Okay, do you physically remember that or has that just  
7 come from your notes?

8 A. No, I do remember her vomiting.

9 Q. So can you describe -- when you've called it a large  
10 vomit, can you describe that to us? Where did it go?  
11 What colour was it?

12 A. From what I remember it was a milky coloured vomit and  
13 it was a large volume that was going into the bed and  
14 down [Baby G]'s clothes.

15 Q. What was that saying to you in your profession?

16 A. I'm not sure. Sometimes babies do vomit.

17 Q. Okay.

18 A. But it's in -- it's not very often that it's projectile.

19 Q. So is that what you're saying it was? If we call it  
20 projectile, what do you mean by that?

21 A. A forceful vomit.

22 Q. Okay. Right. Can you give an explanation of why that  
23 might have occurred in [Baby G]'s case?

24 A. I'm not sure. Had she just been fed prior to that?

25 Q. Were you involved with the feeding of [Baby G] at all?

2

1 A. Not that I remember.

2 Q. Okay. You put there as well:

3 "... obtained from the NG tube with air ++."

4 What's the significance of that, Lucy?

5 A. So there's air in her abdomen that -- sometimes when  
6 babies vomit they can take on air as well if they're  
7 gasping with the vomiting.

8 Q. So you got ++, what's that suggesting?

9 A. It was a larger volume of air than just the general  
10 amount that we would usually obtain.

11 Q. Okay. And your thought was that was because of the  
12 vomit?

13 A. Yes.

14 Q. Is there any explanation of why [Baby G] might have this  
15 large amount of air?

16 MR JUSTICE GOSS: "Any other explanation."

17 MR ASTBURY: Sorry.

18 A. I'm not sure. Sometimes air can just accumulate in the  
19 abdomen.

20 Q. For what reason?

21 A. If there's some sort of bowel issue or infection.

22 Q. Okay. But at the beginning of shift, everything was  
23 okay, yeah? And then within quarter of an hour she  
24 deteriorated somewhat. When [Baby G] was sick, was  
25 anyone else present at the time?

2

1 A. Not that I remember, no.

2 Q. Did you highlight this to anyone?

3 A. I believe I asked for the doctors to review her, yes.

4 Q. Was that the first sign to you that something was wrong  
5 with [Baby G]?

6 A. I think so, yes. Although she'd been a baby that had  
7 been backwards and forwards to different units at other  
8 times.

9 Q. And you know when you said "air ++ from the NG tube",  
10 how did you measure that amount of air? How did you  
11 come to that conclusion?

12 A. So when I've withdrawn the 45ml of milk, air came out  
13 with it.

14 Q. But what determined in your mind to put ++ in your  
15 notes?

16 A. That it was a large amount. I haven't measured the  
17 volume.

18 Q. You described the sick -- the vomit as forceful.  
19 Exactly how forceful was it?

20 A. From memory, I think it went into the cot and [Baby G],  
21 down [Baby G]'s clothing.

22 Q. What was her position in the cot at that stage?

23 A. I think she was on her back.

24 Q. You think or you know?

25 A. I think.

2

1 Q. Okay. So immediately prior to this vomit, where had you  
2 done and what were you -- where had you been and what  
3 were you doing?

4 A. I don't remember.

5 Q. So at the point of the vomit what exactly were you  
6 doing?

7 A. I don't remember.

8 Q. Okay. But you were present at [Baby G]'s cot?

9 A. I think I went into her into because she was vomiting.  
10 I heard her vomiting.

11 Q. So did you see the vomit or did you not see the vomit?

12 A. I did see her vomiting.

13 Q. So why did you go in to her?

14 A. I don't remember. I don't know if I went in because  
15 I heard her vomiting and then when I arrived she was  
16 still vomiting, I don't remember.

17 Q. So just to be clear, you believe that you may or may not  
18 have been present when she was vomiting and it may be  
19 that you were -- you went into her because you heard her  
20 vomiting?

21 A. Yes.

22 Q. But you don't know where you were?

23 A. No.

24 Q. Okay. At the point you took over at 2, were there any  
25 concerns for [Baby G]?

2

1 A. No, as I say I don't remember why I took over.

2 I thought I took over her care because she needed  
3 further intervention and moving to another nursery,  
4 which the other nurse couldn't care for her.

5 Q. At the start of the interview you said that you remember  
6 that her designated nurse was on a break.

7 A. Yes, I think so.

8 Q. Is that why you took over her care at 2?

9 A. Usually if we take over care for somebody on a break we  
10 don't document it anywhere, we would just carry out any  
11 task that needed to be done whilst that person wasn't on  
12 the unit. We don't usually write that we've taken over  
13 care.

14 Q. Okay. Were you the first person to treat [Baby G] following  
15 the vomit, tend to her?

16 A. Yes, I think so yes.

17 Q. Okay. Moving on in the notes, I think you've got them  
18 there in front of you:

19 "Abdomen noticed to be distended and discoloured.

20 Colour improved. Colour improved a few minutes after  
21 aspirating tube. Remained distended but soft."

22 Who noted this, do you remember?

23 A. Myself.

24 Q. You physically remember that, do you?

25 A. From my notes I remember.

2

1 Q. Okay. This discolouration, can you describe that any  
2 further to us and from the notes?

3 A. No, I don't remember clearly the discolouration.

4 Q. Okay.

5 Lucy Letby confirmed that Dr Ventress attended, but  
6 then was called away to the labour ward and the plan was  
7 to start fluids:

8 Okay. You then go on to say:

9 "At approximately 03.15 [Baby G] had a profound  
10 deterioration to 20%, marked colour loss with apnoea,  
11 bradycardic to the 50s, Neopuffed in 100% oxygen."

12 How soon after did that occur from when the doctor  
13 left to go to the theatre?

14 A. I don't remember.

15 Q. You said you remember her going off to the theatre.

16 Can you give us any sort of idea? Was it shortly  
17 afterwards, some time afterwards?

18 A. I really don't remember.

19 Q. Okay. So who was present when this profound  
20 desaturation occurred?

21 A. I don't remember.

22 Q. Do you remember where you were when this occurred?

23 A. No.

24 Q. Where were you prior to when it happened? What were you  
25 doing?

1

2

1 A. So I'm not sure whether I was going to get fluids ready.

2 I don't know if I was in the nursery or whether I was  
3 out of the nursery to go and get the fluids ready.

4 I really -- I don't remember specifically.

5 Q. Okay. Do you remember the colour loss? This colour  
6 loss, can you describe it in any further to us [as  
7 read]?

8 A. No.

9 Q. Lucy Letby then confirmed she took over [Baby I]'s care  
10 after she'd fallen ill and that a nurse would not  
11 ordinarily endorse the notes if they were just covering  
12 whilst the designated nurse...

13 (Pause)

14 That should be [Baby G], not [Baby I]. Thank you.

15 Would not ordinarily endorse the notes. Can I just  
16 ask everyone perhaps to change that before we move on?

17 (Pause)

18 A nurse would not ordinarily endorse the notes if  
19 they were just covering while the designated nurse went  
20 on his or her break:

21 And following [Baby G]'s collapse did you have any  
22 involvement with the family at all?

23 A. I think the parents attended the unit, yes, but I can't  
24 remember specifically if they did or if I spoke to them.

25 Q. Okay. We're going to move on to 21 September 2015 and

1

2

1 the second episode that [Baby G] suffered. There's a few  
2 pages of notes that we're going to show to you, similar  
3 to the last time.

4 Lucy Letby was then provided with the relevant  
5 notes.

6 A. So this is a feed chart. I fed [Baby G] at 9.15 on  
7 21 September and I fed her breast milk of 40ml via an NG  
8 tube.

9 Q. Could we put tile 47 up, please, Mr Murphy? Just while  
10 we're talking about the documents.

11 A. So this is a feed chart, I fed [Baby G] at 9.15 on  
12 21 September and I fed her breast milk of 40ml via an NG  
13 tube. And I've written:

14 "30ml discarded and two milky projectile vomits."

15 She's had her blood sugars taken at that time, which  
16 was 9.2, and I've written that she had a large bowel  
17 movement that was loose and watery and green and I have  
18 written in the comments box that she was reviewed by the  
19 doctors.

20 Q. Yes. So this obviously is 21 September, some 2 weeks  
21 after the first episode, which we've just discussed. Do  
22 you remember this particular shift, Lucy?

23 A. Yes, vaguely.

24 Q. Can you remember your involvement with the care of  
25 [Baby G] on this day?

2

1 A. I think from memory [Baby G] was down in nursery 4 and  
2 I looked after her for a period of time in the morning  
3 and then someone else took over later on in the morning.

4 Q. Right. Is there anything else you can remember about  
5 that?

6 A. I remember it was a busy day and I think I had several  
7 other babies as well as [Baby G].

8 Q. Who was the designated nurse for [Baby G] on this shift?

9 A. Myself.

10 Q. Okay. You've already said that you were caring for  
11 other babies.

12 A. I think I may have been split between nursery 3 and  
13 nursery 4 but I don't remember specifically.

14 Q. Okay. And in relation to the unit, what is nursery 3  
15 and 4 compared to the other two?

16 A. So they're special care nurseries with just babies that  
17 require special care.

18 Q. So as far as their general sort of well-being, are they  
19 in a better place than babies that would be cared for  
20 in the other nurseries?

21 A. Yes.

22 Q. Would [Baby G] have been attached to any equipment at that  
23 time?

24 A. Yes, I think she was still on a Masimo monitor.

25 Q. What was the care plan in place for [Baby G] at this time?

1

A. I don't remember.

2

Q. Okay. Do you remember how [Baby G] was handling?

3

A. No, I don't remember.

4

Q. Were there any concerns for [Baby G] from you at this time  
in the health of [Baby G]?

5

A. I think from memory mum had maybe said that she was  
quieter than usual.

6

Q. Do you remember when she said that to you?

7

A. I don't remember an exact time, no.

8

Q. Okay. What did you do about that?

9

A. I don't remember without looking at my notes.

10

Q. If you follow the notes with me, Lucy [and this is  
tile 65, I don't think we need to go to it, my Lord]:

11

"[Baby G] nursed in her cot. [Baby G] appears pale.

12

Temperature 36.4. Hat in situ and well wrapped. NG

13

tube feed. Expressed breast milk given. AWT at 09.00

14

as [Baby G] asleep and due immunisations."

15

Why have you noted that she appeared pale? What was

16

your view of that?

17

A. I don't remember from memory.

18

Q. Okay. Did anyone else comment on that at all?

19

A. I think her mum may have.

20

Q. Do you remember this particular feed for [Baby G]?

21

A. No, not clearly.

22

Q. Lucy Letby explained how [Baby G] would have been fed by

1

2

1 gravity via her NG tube when she was asleep:

2               Okay, and on this particular occasion at 09.00 did  
3               everything go swimmingly, according to plan?

4       A. I don't remember without reading my notes.

5       Q. That's fine.

6       A. So from reading my notes there it would appear there  
7               wasn't an issue with that 9 o'clock feed.

8       Q. Okay. At 10.15:

9               "×2 large projectile milky vomits. Brief  
10               self-resolving apnoea and desaturation to 35% with  
11               colour loss."

12               What can you tell me about that?

13       A. I don't remember it clearly.

14       Q. Do you remember being present when this occurred?

15       A. I don't remember.

16       Q. There's nothing you remember about that event? Did the  
17               monitor activate?

18       A. I don't remember.

19       Q. Can you remember if anyone else was present at the time?

20       A. No, I don't remember.

21       Q. Or what you did?

22       A. I don't know if mum was there. I don't remember.

23       Q. What did you think was going on with [Baby G] at this time?

24       A. I don't remember my thoughts on that day.

25       Q. There are 30ml of undigested milk discarded. What's

1

2

1           that saying to you, that it's undigested?

2       A. That he hasn't digested the milk that was given to her  
3           at 9 o'clock.

4       Q. And in your opinion is there a reason for that?

5       A. She'd only been fed an hour prior to that so it's not  
6           unusual that she would still have undigested milk in  
7           abdomen, her stomach.

8       Q. And you then go on to say:

9           "Temperature remains low, tachycardic, greater than  
10           100 beats a minute since vomit [180]. Mum states that  
11           [Baby G] does not appear as well as she did yesterday."

12           Do you remember at what stage she actually said that  
13           to you?

14       A. No, I don't remember.

15       Q. The way your notes read would suggest that's post,  
16           post-vomit. Is that the way you look at it?

17       A. Yes.

18       Q. And then the next activity date:

19           "12.52. Mummy telephoned this morning. Arrived  
20           shortly after 10 [10 o'clock]."

21           Do you remember who telephoned her?

22       A. It says there that mum telephoned the unit.

23       Q. Okay. Do you remember who spoke to her?

24       A. No. Usually the designated nurse would try to speak to  
25           the parent if they've phoned. I don't remember.

2

1 Q. Did you have any dealings with the family after [Baby G]  
2 had left?

3 A. Discharged [Baby G]?

4 Q. Mm-hm?

5 A. No.

6 Q. That interview then concluded; is that right?

7 A. Yes.

8 Q. Thank you.

9 We then go on to the second interview centring on  
10 [Baby G]. It took place on 11 June 2019.

11 A. Yes.

12 Q. Following introductions, Lucy Letby confirmed that she  
13 was okay to continue; is that right?

14 A. Yes, that's correct.

15 Q. Okay, Lucy, I want to talk to you about [Baby G]. When  
16 you were interviewed about [Baby G], Lucy, in relation to  
17 the collapse on 7 September, you stated that you  
18 remembered her because [Nurse E], who was [Baby G]'s  
19 designated nurse, was on a break when this happened with  
20 [Baby G].

21 A. Yes.

22 Q. Do you recall that?

23 A. Yes.

24 Q. You also confirmed that you (inaudible: coughing) [Baby G]  
25 when she projectile vomited; can you remember that?

1

A. Yes.

2

Q. Do you agree, Lucy, that [Baby G] was stable at this time  
that [Nurse E] had gone on her break?

3

A. Yes, I don't remember there being anything concerning  
with her.

4

Q. Okay. Do you also agree that [Nurse E] wouldn't have gone  
on her break if there were issues with [Baby G]?

5

A. No, [Nurse E] wouldn't have left her, no.

6

Q. Lucy Letby was then informed of Dr Evans' opinion:

7

Would you agree, Lucy, that [Baby G] must have received  
more than the required 45ml of feed if this amount was  
aspirated following a collapse given that her vomiting  
was described as projectile?

8

A. Yes, either that or she's not digested the milk from the  
previous feed.

9

Q. It's just -- sorry, is there a test that you do to see  
if that's the case before you do a feed, Lucy?

10

A. Yes, so usually the tube is tested between -- after --  
before each feed to see how much is in.

11

Q. So you would aspirate to see what's --

12

A. We always test the tube. We don't always pull back to  
see the full volume, but you'd always take a little bit  
to test the pH of the --

13

Q. Right. And if that test would indicate that the feed  
hadn't been digested, would you still continue to feed

1

2

1                   the baby the full amount of the following feed?

2       A. Um, it would depend on the baby's circumstances but no,  
3                   not necessarily, no.

4       Q. So under what circumstances, if the milk hasn't been  
5                   digested, would you still give a full feed?

6       A. I'd ask for advice from somebody else.

7       Q. Okay. So in your experience, Lucy, would you give  
8                   a baby a full feed if the milk from the previous feed  
9                   hadn't been digested?

10      A. No.

11      Q. At any point while [Nurse E] was on her break have  
12                   you overfed [Baby G], causing her to vomit?

13      A. No.

14      Q. Did you administer air to [Baby G] at this time, causing  
15                   her to collapse?

16      A. No.

17      Q. In your previous interview, Lucy, you said that you  
18                   obtained a larger volume of air from the NG tube than  
19                   just the general amount you would usually obtain.

20      A. Yeah, I'm not sure at what point I did aspirate the tube  
21                   and find that air. Was it when she vomited?

22      Q. Yeah, you said after a vomit you took over her care as  
23                   a designated nurse and you obtained a larger volume of  
24                   air from the NG tube than just the general amount you'd  
25                   obtained.

1

2

1 A. Yeah.

2 Q. Would you agree that she must have received a bolus of  
3 air from the feeding syringe?

4 A. Air has got there somehow, yes.

5 Q. Do you have an explanation, Lucy, as to how the air  
6 could have got there?

7 A. No.

8 Q. Are you responsible for the attempted murder of  
9 [Baby G] on this day, 7 September, Lucy?

10 A. No.

11 Q. Okay.

12 Looking at the 21 September, Lucy, [Baby G] was stable.  
13 You stated that you carried out observations on [Baby G] at  
14 9 am and at 11 am and that you fed her at 09.15 hours,  
15 40ml via her NG tube. I'll just show you the feeding  
16 chart for that day.

17 A. Yes.

18 Q. That verifies what I have just said to you; do you agree  
19 with that?

20 A. Yes.

21 Q. You were then asked, Lucy, about [Baby G] suffering two  
22 milky vomits at 10.15. However, you couldn't recall if  
23 you were present for those. You confirmed that you  
24 aspirated 30ml, which is shown in the feeding charts  
25 following the two vomits. Looking at those feeding

2

1           charts, Lucy, can you tell me if there was any  
2           undigested milk in [Baby G]'s stomach prior to giving her  
3           that 9 o'clock feed?

4           A. There, 30ml of milk that was discarded.

5           Q. Okay. So that's in line with that entry there at the  
6           top. What can you tell me about that?

7           A. That 30ml of milk was found --

8           Q. Mm-hm.

9           A. -- on aspiration --

10          Q. Mm-hm?

11          A. -- and it was discarded.

12          Q. Okay. And have you still -- have you then still gone on  
13           to feed [Baby G] 40ml at 9 am?

14          A. Yes. It would look like that, yes.

15          Q. So prior to that feed, can you confirm that [Baby G]'s  
16           stomach would have been empty, having discarded that  
17           30ml?

18          A. Yes.

19          Q. Okay. And you've then emptied her stomach of the 30ml,  
20           you've fed her the 40ml, and then she's suffered the two  
21           projectile milky vomits?

22          A. Yes.

23          Q. Do you agree, Lucy, that [Baby G] was fed far more than  
24           40ml for her then to suffer two large milky projectile  
25           vomits?

1

2

1 A. No. I think she could have projectile vomited on 40ml.

2 Q. Lucy Letby was then informed of Dr Evans' opinion that  
3 [Baby G] had received excessive volumes of both milk and  
4 air.

5 A. I didn't overfeed her.

6 Q. Did you administer air to [Baby G] via her NG tube, Lucy?

7 A. No.

8 Q. Lucy Letby indicated she could not say where any air  
9 came from. And she was asked:

10 Are you responsible for the attempted murder of  
11 [Baby G], Lucy?

12 A. No.

13 Q. Have you got any further explanation as to how this  
14 could have happened to [Baby G]?

15 A. No.

16 Q. Moving on to the third interview in respect of  
17 [Baby G]. We can see, officer, that took place on  
18 10 November 2020.

19 A. Yes.

20 Q. And the portion that we're about to read or the summary  
21 was part of a longer interview, the times of which are  
22 set out below the date?

23 A. Yes.

24 Q. Thank you. So looking at this summary:

25 The next baby I want to talk to you about, Lucy, is

2

1 [Baby G]. On your previous interviews regarding [Baby G],  
2 Lucy, you denied being responsible for the attempted  
3 murder of [Baby G] on the 7th and then on 21 September  
4 2015. Is there anything you wish to say, Lucy?

5 A. No.

6 Q. Okay. We've got a statement from Dr Ventress. She  
7 stated that at 3.30 hours, while she tried to ventilate  
8 [Baby G], she noted bloodstained fluid coming up from the  
9 trachea and through the vocal cords at the back of her  
10 throat. Dr Ventress reconnected [Baby G] to the ventilator  
11 and things then improved. Do you recall that?

12 A. No.

13 Q. Do you know the cause of [Baby G]'s injury to her throat?

14 A. No.

15 Q. At 06.05 hours [Baby G] had another episode. She said that  
16 she changed her breathing tube. When this was removed  
17 she noted there were thick secretions in [Baby G]'s mouth  
18 and a blood clot at the end. Can you explain the thick  
19 secretions and the blood clot?

20 A. No.

21 Q. Do you know or can you give any explanation, Lucy, as to  
22 how this would have happened?

23 A. No, unless it was -- the clot might have come through  
24 intubation maybe. I don't know. Trauma in the tube.  
25 I don't know what makes secretions thick.

1       MR JUSTICE GOSS: It actually says "this would have been  
2            caused", not "how this had happened". I'm only  
3            correcting you because people who don't have access to  
4            the records may be making notes of it.

5       MR ASTBURY: Sorry. Nearly done.

6       MR JUSTICE GOSS: I know, you've had a long day.

7       MR ASTBURY: Have you ever seen thick secretions within  
8            a baby before?

9       A. Yes.

10      Q. And what was the cause for those?

11      A. I think sometimes it's an infection, but sometimes  
12           babies just have thick secretions.

13      Q. So how can trauma be caused by putting the tube in then?

14      A. I'm not sure, but it's -- it's a doctor's role, but they  
15           quite often say sometimes that, you know, it was  
16           a difficult -- it was a tight airway or they've, you  
17           know, it's been difficult to pass the tube. So if that  
18           can cause a little bit of abrasion or something, and  
19           sometimes we do get bloodstained secretions back from  
20           the tube and with the suction and the doctors will say,  
21           oh, that's because it was traumatic to get it in.

22      Q. Okay. We've got a statement from [Nurse B], Lucy.

23      Do you remember [Nurse B]?

24      A. Yes.

25      Q. Okay. She's provided evidence as to doctors attending

2

1 to [Baby G] on 21 September and placing screens around  
2 her so they could fit a cannula and describes [Baby G] as  
3 being on the procedure trolley with her Masimo monitor  
4 switched on. She states that at some point she left  
5 [Baby G] with the doctors so she could attend elsewhere on  
6 the unit and a short time later she heard you shouting  
7 for assistance. She says you were providing ventilation  
8 breaths and she noted that [Baby G]'s Masimo monitor was  
9 switched off. Do you recall that event that [Nurse B]'s  
10 describing?

11 A. Parts of it. Yeah, I recall going to [Baby G] and finding  
12 her behind the screen --

13 Q. Okay.

14 A. -- on the procedure trolley, which we wouldn't -- we'd  
15 never leave a baby unattended on the procedure trolley.

16 Q. And in relation to the Masimo monitor being switched  
17 off, do you recall that?

18 A. No.

19 Q. Is it bad practice to switch the monitor off during a  
20 situation as described by [Nurse B] there?

21 A. Yes. But I am not sure when I came in to her whether  
22 she had the monitor on or not.

23 Q. And then colleague:

24 You said, Lucy, then in your first response that  
25 with regards to being left on the procedure trolley,

1

2

1           you'd never do that.

2       A. No, we'd never routinely leave a baby alone on a  
3           procedure trolley.

4       Q. So has someone made a mistake there, do you think?

5       A. Yes.

6       Q. Okay. So?

7       A. And we also wouldn't leave a baby behind the screens  
8           either. It should be --

9       Q. Right?

10      A. -- in view of whoever attended.

11      Q. So looking at social media, Lucy, and Facebook, just as  
12           a reminder so you can correlate the dates, [Baby G] was  
13           born on 31 May 2015 and you completed numerous searches  
14           for [Baby G]'s mother [Mother of Baby G]. You searched  
15           for her on 21 September 2015, 5 November 2015, 14  
16           November 2015, 23 January 2016, 12 February 2016, and  
17           then 1 September 2016. Do you agree that you made those  
18           searches on Facebook?

19      A. Yes.

20      Q. Do you remember making them?

21      A. No.

22      Q. Have you got any comments you wish to make about those  
23           searches, Lucy?

24      A. No.

25      Q. Okay. In relation to your mobile phone and text

1 messages, in relation to the event to [Baby G] that  
2 happened on 21 September, at 9.20 in the evening of that  
3 date you messaged [Nurse A] and said:

4 "Looked rubbish when I took over this morning. Then  
5 she vomited at 9 and I got her screened."

6 Why did you make that comment and send that message  
7 to [Nurse A]?

8 A. I'm not sure.

9 Q. Do you recall sending it, Lucy?

10 A. No.

11 Q. When you said "looked rubbish", can you explain what you  
12 meant by that?

13 A. I don't remember.

14 Q. Okay. The time by my watch is 5.38 and the interview is  
15 suspended.

16 So that was the conclusion of that third interview  
17 with [Baby G] --

18 A. Yes.

19 Q. -- concerning [Baby G]. Thank you.

20 So we move on to [Baby H].

21 MR JUSTICE GOSS: This will be the last baby for today.

22 It's just so that people know where we go to. It's only  
23 13 pages in total. It'll only be 15 or 20 minutes, then  
24 we'll finish for the day. Otherwise everything  
25 amalgamates into one, so to speak, and it becomes

2

1 difficult. So this will be the last baby and it's  
2 relatively short in terms of interviews, just so that  
3 people know.

4 MR ASTBURY: [Document redacted], all being well, being the  
5 page that's now open. We can see the date of interview,  
6 the first interview involving [Baby H], 5 July 2018.

7                   A. Yes.

8 Q. It began with introductions and caution?

9 A. Yes.

10 Q. Okay, as I said, this is a continuation of interviews  
11 and the baby that we are going to speak about now is  
12 [Baby H]. Are you happy that you've had chance to read  
13 the notes prior to the interview?

14 A. Yes.

15 Q. Okay. Any notes as before are here and available for  
16 you to look at if that helps your memory, okay, and you  
17 can do that.

18 A. Yes.

19 Q. Then in fact, Ms Letby's solicitor asked:

"Do you want to have the notes in front of you?"

21 And she replied?

22 A. Yes, please.

23 Q. Okay. Just to summarise, [Baby H] was born at 18.22 on  
24 22/9/15. At 03.22 hours on 26/9/2015, [Baby H] collapsed.  
25 She also collapsed a second time on 27/9/2015. Okay?

2

1 A. Yes.

2 Q. Okay. Generally, with regard to [Baby H], and specifically  
3 the collapses that I have just mentioned, do you have  
4 memories aside from the notes?

5 A. Yes.

6 Q. Okay. So tell me what memory you have.

7 A. I remember caring for [Baby H]. She had chest drains in  
8 and chest drains aren't something that I've looked after  
9 a lot or see a lot of on the unit.

10 Q. Okay.

11 A. So I remember her predominantly in that aspect of having  
12 chest drains.

13 Q. So specifically what about the collapses?

14 A. I remember on one of the collapses we needed to insert  
15 another chest drain and there was some delay in  
16 obtaining the equipment because it wasn't something that  
17 we use a lot on the unit and I think she had two  
18 different types of chest drain and so they're cared for  
19 in different ways.

20 Q. The officers confirmed that Lucy Letby had read her  
21 notes and then took her...

22 Let's go to your entry. If you look at 3.22:

23 "Profound desaturation and colour loss to 30%."

24 A. Yes.

25 Q. Okay. Tell us about that.

1

2

1       A. I only remember via my notes that she had a desaturation  
2           and colour loss. Um, Neopuff was commenced. I assume  
3           that was by myself and I would have summoned help at  
4           that point. I think I do remember that there was a lot  
5           of fluid coming out of her drains at the time.

6       Q. Okay. So up to this point of the desaturation, how was  
7           [Baby H] handling?

8       A. I don't remember.

9       Q. Okay. So how were you alerted to this particular  
10           desaturation?

11      A. I would assume from her monitors alarming.

12      Q. Do you remember?

13      A. No.

14      Q. What monitors was she on?

15      A. All ventilated babies would be on a Philips monitor,  
16           which is a full monitoring system.

17      Q. Okay. So you don't recall where you were at the time  
18           that this desaturation occurred. You don't know whether  
19           you were present --

20      A. No.

21      Q. -- or whether it was the monitor that alerted you?

22      A. No, I don't remember.

23      Q. Okay. Was anybody else given (sic) her care at this  
24           time?

25      A. Not that I remember. If we're giving medication,

2

1                   somebody else would have checked those with me. I don't  
2                   recall any other care.

3           Q. Okay. But from your notes you were designated nurse?

4           A. Yes.

5           Q. Okay. So with regards to the colour loss to 30%,  
6                   explain that to me.

7           A. I don't remember it specifically for [Baby H], but profound  
8                   desaturation, colour loss to 30 -- colour loss would be  
9                   sort of a -- would be sort of a blue pale appearance.

10          Q. Okay. All over or in certain areas?

11          A. It would usually be all over. I don't remember  
12                   specifically for [Baby H].

13          Q. Where you said, "Good chest movement and air entry" --

14          A. Yeah.

15          Q. -- "colour change on CO2 detector", what does that mean?

16          A. The CO2 detector would be something that we put on to  
17                   the end of the ET tube and when that changes colour it  
18                   shows that there's -- that the tube is retaining CO2,  
19                   which shows the tube is in position.

20          Q. Okay. Then you put:

21                   "Serous fluid ++."

22                   Can you see that entry?

23          A. Yes.

24          Q. Okay, "From all three drains".

25                   So you mentioned previously there was a lot of

2

1           fluids coming from the chest drains.

2       A. Yes.

3       Q. So tell me about that, your observations.

4       A. The drains were connected and some of them were going  
5            into additional sort of tube inputs and I remember a lot  
6            of secrsive (sic) looking fluid coming out of these  
7            drains.

8       Q. What's serous-looking fluid?

9       A. Serous fluid is sort of like a yellowy milky colour.  
10           It's serous fluid from inside the body.

11       Q. And then obviously she's become:

12           "Bradycardic. Doctors crash called and resus."

13           Who did that, who did the crash call?

14       A. I don't remember.

15       Q. Okay. So from 03.22 when you've noted the profound  
16           desaturation to the crash call, do you recall how long  
17           that was, what time period?

18       A. No.

19       Q. On the 26th do you recall the resus of [Baby H] on this  
20           occasion?

21       A. No.

22       Q. Can you recall what role you played?

23       A. No, not without looking.

24       Q. Then can I just ask one question, so from your notes  
25           there:

2

1                   "[Baby H] desaturating ++ on handling."

2                   Is that to say that [Baby H] started to go downhill  
3                   when you were with her?

4                   A. So that means [Baby H]'s desaturating when she's being  
5                   handled, yes.

6                   Q. So prior to that were there any concerns for [Baby H]?

7                   A. Prior to the desaturation?

8                   Q. Yes.

9                   A. And the handling?

10                  Q. Yes.

11                  A. The desaturation?

12                  Q. Yes. The point I'm trying to get across is, did [Baby H]  
13                  start to desaturate when she was in your possession?

14                  A. Yes, I've written that she's desaturating on handling,  
15                  so minimum handling was observed when possible.

16                  Q. Okay, but you -- it was you that was handling [Baby H]  
17                  at the time?

18                  A. Yes.

19                  Q. Can you remember what you were doing?

20                  A. No.

21                  Q. Okay. So next there's an addendum, 05.21.

22                  A. Yeah.

23                  Q. "Conversation with myself, Dr Gibbs and the parents,  
24                  explaining [Baby H]'s deterioration. Parents concerned re  
25                  brain damage. Support and information given. Aware

2

1 that [Baby H] is poorly and may deteriorate again.

2 Blessing offered by Dr Gibbs. Parents keen for this to  
3 happen tonight. Extended family members contacted and  
4 coming to the unit. Catholic priest asked to attend."

5 Okay. What was the explanation given as to [Baby H]'s  
6 deterioration?

7 A. I don't recall specifically.

8 Q. Okay. And why was it likely that she would deteriorate  
9 again?

10 A. I don't think it was likely, I think it was just  
11 a potential that as she was a sick baby she could  
12 deteriorate again.

13 Q. How did you feel about, what were your concerns about,  
14 the collapse of [Baby H]?

15 A. I think it was quite a new thing for me. As I said  
16 previously, I've not cared for many babies with chest  
17 drains before because obviously I came on shift to  
18 [Baby H], who was stable but was already ventilated with  
19 drains in situ, which --

20 Q. Okay.

21 A. -- is something I hadn't seen a lot of on the unit.

22 Q. Okay. And what challenges did that bring?

23 A. So it's a different level of care to have to give to a  
24 baby with -- with those drains.

25 Q. Right.

2

1 A. And as I say, it's not something we see a lot of on the  
2 unit. Quite often, babies like that would be  
3 transferred out and cared for at a level 3 hospital.

4 Q. The contact with [Baby H]'s parents with that collapse,  
5 do you remember any of the contact between them?

6 A. I remember them coming to the units and having  
7 a blessing for [Baby H], yes.

8 Q. Okay. Any particular conversations you had with them  
9 other than you've noted in your note?

10 A. Not that I recall.

11 Q. Then questions turn to the second event on  
12 27 September 2015. Lucy Letby confirmed that she'd been  
13 through the notes, but said that she did not recall in  
14 great detail from memory. The officers recapped those  
15 entries on the night shift of the 26th into the 27th,  
16 which bore Lucy Letby's name:

17           Okay. Do they remind you of this second collapse of  
18 [Baby H]?

19 A. Not in any clear detail, no.

20 Q. Would you agree by those notes you are at the periphery  
21 of the care for [Baby H] on that occasion?

22 A. Yes.

23 Q. Okay. And again, what about contact with parents?

24 A. I don't recall specifically speaking to the parents.

25 Q. Okay.

2

1 A. I'm assuming if they were there I would have spoken to  
2 them at some point.

3 Q. Anything else you want to add that we've not  
4 specifically asked you about, about the care of [Baby H]?

5 A. No. As I say, for me, I just remember [Baby H] because of  
6 chest drains being an unusual thing and the difficulty  
7 we had at times with obtaining the equipment for her.

8 Q. Thank you. That concluded that particular interview.

9 We move on to the second interview at [redacted],  
10 please. We can see this took place on 11 June 2019.

11 A. Yes.

12 Q. Okay, we'll move on to [Baby H] now, Lucy. You  
13 remembered [Baby H] from her chest drains and, following  
14 one of her collapses, having to insert another chest  
15 drain, and I think you remember it because you didn't  
16 use them a lot on the unit. Do you remember that?

17 A. Yes.

18 Q. You were designated nurse for [Baby H] on 26 September  
19 and involved with her care on 27 September 2015 from the  
20 notes again. Do you remember that?

21 A. Yes.

22 Q. Lucy Letby was then shown the prescription chart at tile  
23 235 and the entry dated 26 September 2015. Can I just  
24 ask Mr Murphy to put that up, please. That will be the  
25 third entry up from the bottom.

2

1                   Can you just confirm to me that's your signature  
2                   there, Lucy, on that?

3   A. That's my signature, yes.

4   Q. Okay. Can you just confirm what your signature was  
5                   against?

6   A. Um, it was a saline bolus.

7   Q. And is that the administration of a saline bolus?

8   A. I'm not sure who administered it.

9   Q. Can you just tell me the other signature next to your  
10                  name? Do you recognise it at all or is it unreadable?

11   A. No, I wouldn't confidently say. [Nurse A]?

12   Q. You were the designated nurse for this day, Lucy?

13   A. Mm-hm.

14   Q. Does that make it more likely that you'd have  
15                  administered this?

16   A. No, it depends who was drawing up the drugs at the time,  
17                  if any other drugs were being drawn up at the same time.

18   Q. Okay.

19                   Lucy Letby then denied being responsible for the  
20                  profound desaturation, which required resuscitation at  
21                  03.22:

22                   Did you intentionally cause her harm?

23   A. No.

24   Q. Dr Ventress says that she was crash called to the  
25                  neonatal unit at 03.24 hours on 26 September and she

2

1 documents that no trigger to the collapse had been  
2 identified. Is there anything you did, in your opinion,  
3 Lucy, that caused her to collapse?

4 A. No.

5 Q. Do you have an opinion on why she collapsed?

6 A. No. She was a sick baby at the time.

7 Q. Did you attack her at this time?

8 A. No, I did not.

9 Q. What did you do, Lucy, that caused [Baby H] to collapse?

10 A. I didn't do anything.

11 Q. That interview concluded at 9.37 on that particular day.

12 Then interviewed in part on the third occasion on  
13 10 November 2020.

14 A. Yes.

15 Q. The usual information on our frontispiece. Following  
16 introductions, Lucy Letby confirmed that she was okay to  
17 continue answering questions:

18 Lucy, I'm going to talk to you now about  
19 [Baby H]. In your previous interviews, Lucy, you  
20 remembered [Baby H] from her chest drains. You denied  
21 being responsible for her collapses on both of those  
22 days. Is there anything else you'd like to add  
23 regarding those interviews?

24 A. No.

25 Q. So we have a statement from Shelley Tomlins at

2

1           21.45 hours on 26 September. [Baby H] desaturated and  
2           she -- and she suctioned thick bloodstained secretions  
3           from her ET tube. Do you know the cause for the thick  
4           bloodstained secretions?

5           A. No.

6           Q. Lucy Letby was asked about the valve which Dr Jayaram  
7           recalled he had found closed. She said she was  
8           unfamiliar with chest drains and denied closing it, and  
9           was asked:

10           Right, okay, what would the consequences be to  
11           [Baby H] with the valve being closed?

12           A. The drain wouldn't be doing its job.

13           Q. In regards to social media, Lucy, [Baby H], as we  
14           told you, was born on 22 September and discharged on  
15           9 October 2015. On 5 October 2015, at 01.18 hours  
16           in the morning, you searched on social media for  
17           [Mother of Baby H; do you agree?]

18           A. Yeah. I don't remember doing it, but yeah.

19           Q. Okay. In regards to your mobile phone, this is a text  
20           message from you to [Nurse A] on 26 September 2015 at  
21           21.32 hours. It says this:

22           "[Baby H] had had good day, one drain removed, but  
23           just blocked tube and tonnes of secretions. Shelley has  
24           her."

25           Then it says:

1

2

1           "[Nurse B] in 4 and seemed a bit off when she came in,  
2       saying she'd have liked to have had her but now keeps  
3       saying she doesn't feel well."

4

"I have..."

5

And then we have edited that to "E and N". The full  
names are there, they're not indictment babies:

6

"Hope you're okay."

7

Do you remember that text message?

8

A. No.

9

Q. Is it a common occurrence to have tonnes of secretions,  
Lucy?

10

A. No.

11

Q. Right, okay. Was this to pass the blame to Shelley with  
regard to the secretions?

12

A. No, there's no blame, I'm just stating the fact that  
Shelley looked after her. Maybe [Nurse A] asked me who  
had her. I don't know.

13

Q. And that was the extent of the interview on that day.

14

A. Yes.

15

MR JUSTICE GOSS: The remaining interviews in this file are  
all relating to [Baby I] and they're much more  
substantial. We won't start them now. I know it's  
a bit earlier, but it's been a long day, and it's a long  
weekend as far as you're concerned, a long break,  
4 days.

2

I gather you've been given the sheet of the non-sitting days. You probably noticed that there was an additional day that I've added to it, which is Wednesday, 3 May. The Monday is a public holiday, but the Wednesday is a non-sitting day as well. You may take this, as it says, that as at today these are the non-sitting days for this month and next month. All right?

9

10

11

12

13

14

(In the absence of the jury)

20

MR JUSTICE GOSS: I don't think there's anything else?

21

MR ASTBURY: No, thank you.

22

MR MYERS: We'd be grateful if Ms Letby could remain for

23

a little while for us to speak to her, my Lord.

24

MR JUSTICE GOSS: Yes. Mr Myers and others -- will you be

25

1

2

1       MR MYERS: I will be.

2       MR JUSTICE GOSS: And others will be coming down very  
3                    shortly, so please don't remove her from the building  
4                    until they've been down. Thank you very much.

5       (3.58 pm)

6                    (The court adjourned until 10.30 am  
7                    on Tuesday, 25 April 2023)
